Open with a Rush—

—that's the usual way the battery business starts in the spring and this year will be no exception, except that there will be a strong transportation handicap to get over.

We strongly urge our patrons to anticipate their needs and to book their orders as early as possible. In this way there will be less disappointment and needless worry at the last minute.

Book your orders now for

"Master" Batteries

and beat the transportation handicap.

The popularity of the "SPHINX"

affords an excellent argument why you should sell these world-renowned plugs.

You should sell them because they are guaranteed (without reservation or time limit) to give the fullest measure of satisfaction, remembering that satisfied customers are an asset.

To refer your customers to the Sphinx guarantee is to clinch the sale every time.

Write me, and I will quote you the trade prices which ensure abundant profit on every deal.

DUNLOP AUTO TIRES

With so many low-priced so-called anti-skids obtainable, would that great host of motorists pay more for

"Dunlop Traction Tread"

if they could get its merits elsewhere?

Also, would that other large list of car owners buy

"SPECIAL"

if tires which somewhat resemble it in appearance resembled it in efficiency?

Dunlop Auto Tubes

Every Dunlop Tube is seamless—therefore, perfectly air-tight. The method of making them is automatic—cannot go wrong. Elasticity stays with Dunlop—so do countless motorists.

Dunlop Tire Accessories

Like Dunlop Tires and Tubes Dunlop Accessories are thoroughly dependable.

Besides being practical and readily adaptable, the range is wide to cover every need at prices no higher than what Auto owners have to pay for other kinds.

Ally yourself with the Dunlop Line

Dunlop Tire & Rubber Goods Co., Limited

The Book That Means Money To The Hardware Dealer

The automobile is daily becoming a larger factor than ever in the economic life of the community.

It is now being used for almost every phase of the nation's industrial and social life.

They bring the town to the country; the village to the city; making distance and location of little moment. *People to-day realize that automobiles are no longer a luxury, but a necessity.*

This year there will be approximately 250,000 automobiles operating in Canada alone!

Mr. Dealer, do you realize what this fact means to you?

Are you fitted out to get your share of the accessory business?

Our 1918 Catalogue—containing 168 pages—is ready for the press, and within the next few days will be mailed to dealers everywhere. If you fail to receive yours, write for a copy.

This Catalogue is the most thoroughly representative one that we have ever issued. It is simply replete with all the quality lines. Get one and judge for yourself.

To those who are our patrons it will be sufficient for us to say that our 1918 Motto is, as heretofore—

PROMPT AND EFFICIENT SERVICE

To those who anticipate making this house their headquarters for automobile accessories for the current year, we will just say from past experience—that co-operation with "Hyslop Bros." insures large sales and quick turnovers.

DEALERS: If you fail to receive our new Catalogue, write for a copy. It will be mailed to you promptly, together with Wholesale Discount Sheet.

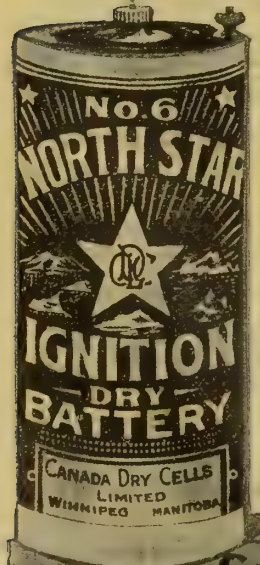
BISHOPRIC
STUCCO BOARD

Stucco is the building material of to-day and to-morrow; Bishopric Stucco Board is the best and cheapest background for stucco, cement and plaster.



It makes a house wind and weather-proof—perfectly rigid—with no cracking or crumbling of stucco or cement.

Bishopric Stucco Board takes the place of Sheathing Lumber, Building Paper, Furring Strips and Metal Lathe—saving the cost of these materials, and fully 75% of the time in putting them on.

You can handle it with profit. Write for prices, samples and booklets.

A Big Demand for Dry Cells Comes with Spring

You don't want any "IFS," "ANDS" or "BUTS" in the Battery you sell. Then consider the North Star Brand. North Star Batteries should be given prominence in your merchandising plans this year. If you are in business FOR BUSINESS, you need them now.

Where dependability counts they sell on merit. The North Star Trade Mark emphasizes the product. The trade mark North Star is the evidence and proof in the case. Evidence that your money has bought the quality you want, proof that you will get the service you have a right to expect.

The Western Battery for the Western Need. Order from your nearest jobber to-day.

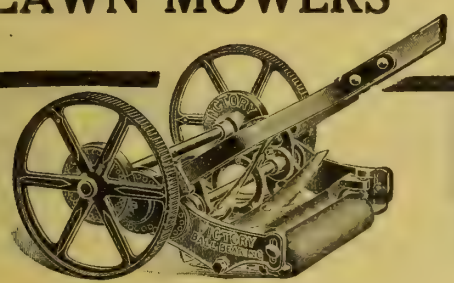
CANADA DRY CELLS, LIMITED, WINNIPEG, CANADA

Advertisement pulls for five months, and still at it.

The Hobart Manufacturing Company, Toronto, makers of Store Equipment, received a reply the other day from a merchant in the British West Indies, to an advertisement of theirs in CANADIAN GROCER of October last. That merchant evidently keeps every issue of his business paper on file. He is not the only merchant who does so.

A Canadian merchant required a particular iron product. He remembered that it had been advertised by a certain firm TEN years before in the MacLean Business Newspaper to which he subscribed. He was able to turn up his files to that very advertisement, and he placed his order.

MacLean Business Newspapers add this extra long life to the advertisements that appear in their pages. The business men who subscribe to them read them thoroughly from first page to last.



MacLean Business Newspapers are kept on file by their readers. They are continually being referred to for business facts. They are continually being referred to for particulars of advertised goods, and for addresses of advertisers. MacLean Business Newspapers reach the business communities interested in your goods. Write to-day for advertising rates of the Business Newspaper most interesting to the readers you want to reach.

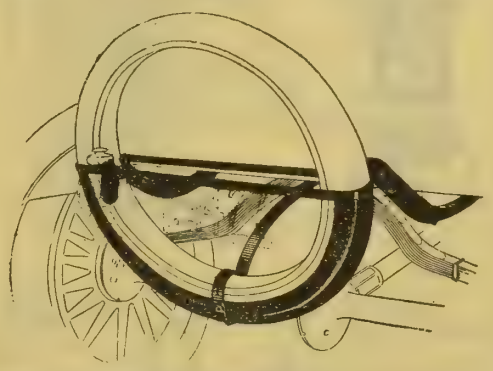
TOWNSEND'S
LAWN MOWERS

BUILT LIKE A WATCH

TOWNSEND MOWERS are superior in every feature of design and construction. In strength, durability and high character of work they do, they have no rivals.

No Noise but the Swish of the Blades



All Blades are of crucible steel, oil tempered. Ball Bearings originally adapted to lawn mowers by Mr. Townsend, insure easy, quiet operation. Triple Compound Gears permit of maximum strength with minimum weight. They are entirely enclosed and prevent dirt or grass clogging the pinions. Handsomely finished in colors and gold.

We manufacture a full line of mowers for use on Golf Courses. Send for complete illustrated catalogue and trade terms.

Ads That Pull

THE retailers who are securing best results from their newspaper advertising are those who are using illustrations in their advertisements. Just as a mail order catalog would be dead without illustrations, so is the average consumer advertisement when illustrations are omitted.

Canadian retail hardware merchants can secure attractive illustrations through HARDWARE AND METAL'S Electro Service. Mounted electros are supplied at a cost of 20c each. Booklet showing 365 electros will be supplied on request. Address below.

"I want a 'Hammer the Hammer' Revolver"

EVERY day customers walk up to the revolver counters of the country and ask for a "Hammer the Hammer" revolver. They have forgotten the name, but the trade-mark and what the trade-mark stands for are *firmly fixed* in their minds. Some remember the name. All remember the famous Iver Johnson trade-mark.

That's how easy it is to sell Iver Johnson Revolvers!

If you would rather spend your time taking in profits than explaining the merits of the unknown, untested revolver, sell the Iver Johnson.

To-day order a complete line of Iver Johnson Hammer and Hammerless models with "Regular," "Perfect" Rubber and "Western" Walnut grips and get the profits that belong to your store.

HOYT METALS

MEMO

March 9th

for your Babbitt Metal file

Be Sure of Quality

Don't say, "Oh, well, Babbitt Metal is only a side line with me," and accept the first metal offered. Investigate for quality, you have a reputation to maintain in Babbitt Metals as in all other lines.

Dealers who handle Hoyt Babbitts—"Nickel Genuine," "Trojan" and "Frost King"—discover that the high quality of these tested metals helps to sell many other articles.

Test our Hoyt Metals in your store. Let your customers' appreciation be your guide.

HOYT METAL CO., Toronto

NEW YORK, N.Y. LONDON, ENG. ST. LOUIS, MO.

Wanted

SITUATIONS VACANT

WANTED—TINSMITH FOR COUNTRY SHOP —must be competent, reliable, exempt from military service. Good salary paid to right man. Apply Drawer A, Rocanville, Sask.

WANTED — GOOD HARDWARE CLERK AND window dresser at once; young married man preferred. Good town to live in. G. A. Outram, Port Hope, Ont.

GOOD LIVE EXPERIENCED RETAIL HARDware salesman for one of best stores in Toronto. Give all details in first letter. Apply Box 370, Hardware and Metal.

WANTED—AN EXCEPTIONAL OPPORTUNity for an intelligent and aggressive salesman, to represent a very reputable paint and varnish house in Ontario. Must be sober and industrious. Applications treated confidentially. Box 367, Hardware and Metal.

WANTED — FIRST-CLASS HARDWARE clerk and window dresser. Must be well posted and capable. Good position to the right man. Apply to The Bond Hardware Co., Guelph.

POSITION WANTED

TRAVELLING SALESMAN WITH SEVERAL years' experience with leading firms, desires road position in Ontario. Box 354, Hardware and Metal.

WANTED — POSITION AS HARDWARE clerk and salesman in hardware store. Exempt from military service. Seven years' general hardware experience; good references. Box 364, Hardware and Metal.

MARRIED MAN, RETAIL AND WHOLESALE hardware experience, desires position with reliable firm; retail preferred. State salary. Box 371, Hardware and Metal.

WANTED — POSITION AS HARDWARE clerk and salesman in hardware store. Exempt from military service. Seven years' general hardware experience; good references. Box 364, Hardware and Metal.

MISCELLANEOUS

WANTED—TO REPRESENT A GOOD LIVE proposition in Manitoba or Western Canada. Headquarters now in Winnipeg, where a good connection is already established. Fifteen years' experience in general hardware, stoves and paints, and can furnish first-class business and bank references. Apply Box 731, Hardware and Metal.

ADDING TYPEWRITER WRITE. ADD OR subtract in one operation. Elliott Fisher Limited. Room 314 Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

FOR SALE

HARDWARE STOCK AND BUSINESS FOR sale in live town of 800. First-class farmers' trade. Hydro just coming in. Apply Box 360, Hardware and Metal.

GOOD HARDWARE BUSINESS IN ONTARIO town of about 1,000 people, with good farm trade. Stock about $6,000. Apply Box 359, Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN large Eastern Ontario city; stock about $8,000.00. Price right for quick sale. Box 361, Hardware and Metal.

FOR SALE — HARDWARE, FURNITURE, stove and tin business. Good farm trade. R. McClanahan, Belwood, Wellington County.

FOR SALE, AT A LIBERAL DISCOUNT—2 National cash registers, cost $210.00 cash; 1 Taylor safe, cost $150.00; 1 oval glass counter show case, cost $30.00; 1 set of tinners' tools, cost $250.00. J. H. Millard, Melfort, Sask.

FOR SALE—BUILDING AND HARDWARE stock in good live Saskatchewan village. Stock on hand about $6,000. Living rooms above. Good opportunity and terms for right man. Box 726. Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN good Western Ontario city; stock five thousand; paying business; act quick. Box 365, Hardware and Metal.

HARDWARE AND TINSMITHING BUSINESS in a Western Ontario town of 800, with good farming connections. Stock, fixtures and tools, $12,000; can be reduced. Box 372, Hardware and Metal.

HARDWARE BUSINESS FOR SALE—IN A Northern Ontario town of 8,000 population. Stock of shelf and heavy hardware, in excellent condition. Stock can be reduced to about $15,000.00. Will sell or lease premises. Owner has been in business over twenty-five years and wants to retire. Box 730, Hardware and Metal, Toronto, Ont.

WANTED

WANTED—A COPY OF JANUARY 13th, 1917, issue of Hardware and Metal. If you have one you can spare send it to Box 600, Hardware and Metal.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WAKYTE · M'F'G Co. · WAKYTE · WINNIPEG · CANADA ·

ANNOUNCEMENT TO THE TRADE

Our new "WAKYTE" models are ready for distribution. Photographs and prices are in the hands of all wholesale hardware travellers, who are now booking orders for fall delivery on "WAKYTE" closets, chemical, barrel trucks, etc. We strongly recommend your placing your order without delay.

The quality of "WAKYTE" goods is not equalled at any price. They not only guarantee you a substantial profit, but enable you to give your customer more value for his money than he can get anywhere else. The 1918 "WAKYTE" products show a decided improvement over anything heretofore offered to the trade.

WAKYTE POWDER CHEMICAL:

To eliminate all loss and annoyance due to defective cans, etc., we are now putting our chemical up in powder form as well as liquid. We recommend your ordering "WAKYTE" POWDER CHEMICAL as it costs less money, goes further, and may be shipped under any weather conditions. It is packed in containers having same capacity as one-gallon cans.

"WAKYTE" BARREL TRUCKS:

You can save yourself considerable time and money by equipping your store with "WAKYTE" BARREL TRUCKS. They are inexpensive and will last practically a life-time. Prices and particulars from your jobber, or direct from us.

Our service this year will be better than ever. By placing your order now you are protected against any advance in prices, and are assured of getting the goods at the specified time to take care of your trade.

For the convenience of our customers, complete stocks of "WAKYTE" goods are carried at Winnipeg, Edmonton, Calgary, Saskatoon, and London, Ont.

WAKYTE MFG. CO., Limited, 259-261 Stanley Street, WINNIPEG

Butterfield

Carbon and High Speed Twist Drills

STRONG AND DURABLE — Butterfield Twist Drills meet the unprecedented conditions of manufacturing which exist to-day. Build a good-paying drill business on the Butterfield line. Write for dealers' proposition.

Thirty-eight years of success is the record of Butterfield Tools. In that time they have established their merits far and wide.

Every man who uses tools knows of the Butterfield line. They are the kind of tools he wants to buy—they are the kind you should have in your store at all times to meet the demand of particular tool users.

There's a Butterfield Twist Drill for every purpose.

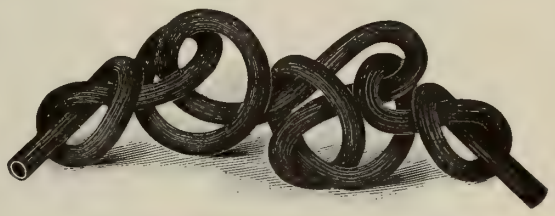
Butterfield & Company, Inc.

Rock Island, Quebec, Can.

MENDETS

A PATENT PATCH

Mend Anything



Impress upon your customers the fact that "Mendets" are effective almost anywhere there is a leak—in graniteware, tin, copper, brass and sheet iron — in hot water bags, tires—in fact all cooking utensils and rubber goods. There is work for "Mendets" in every house—and they'll do it effectively, quickly and cheaply. Put "Mendets" where they can be seen—they'll sell readily enough.

Wholesale Hardware Merchants Who Sell MENDETS:—Whites, Ltd., Collingwood, Ont.; Wood, Vallance, Ltd., Winnipeg, Man.; Wood, Vallance & Co., Hamilton, Ont.; Hobbs Hardware Co., Ltd., London, Ont.; D. The TOOLS MECHANICS BUY

This book was written for YOU, for of course you carry the Starrett line.

Each mechanic who enters your store presents a sales opportunity. It's up to you to cash in on that opportunity to the fullest extent. To help you in selling such customers we have prepared this book, which deals in a most helpful way with the psychology of selling precision tools to the mechanic and points out sales possibilities which you may have overlooked.

If you haven't already received a copy from one of our salesmen, just fill in and mail the coupon for a free copy.

UNIVERSAL

Butter Merger and Churn

Makes two pounds of MERGED Butter from one pound of butter and one pint of milk.

WOMEN are ready to jump at the chance to have more butter at less cost. Show how the "UNIVERSAL" MERGER enables them to produce **two pounds** of Merged Butter for practically the cost of one pound of Commercial Butter, and you'll drive the point of economy squarely into their minds and purses.

The "Universal" Merger puts the greased skids under the high cost of butter. It is a practical, every-day money saver for housewives—as easy to sell as it is to use. Let it butter your business bread with golden profits.

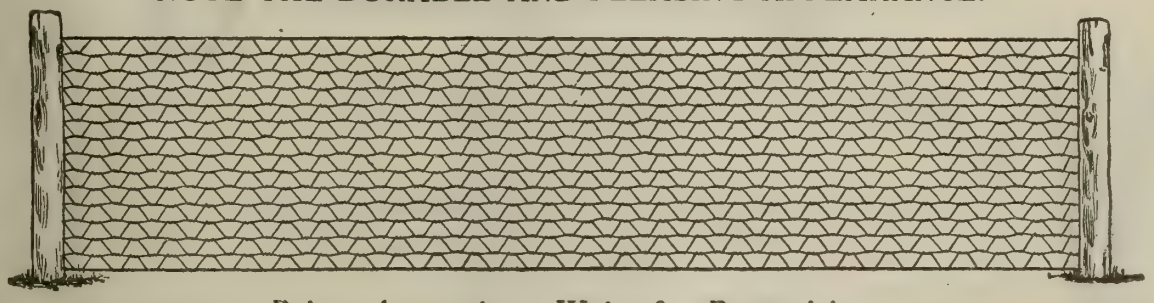
"Its Popularity Grows"

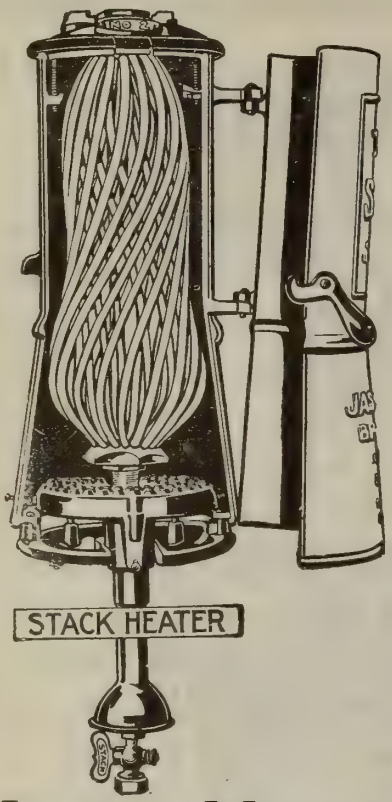


THERE'S more than one reason for the popularity and selling strength of "WW" Brand Poultry Fencing, but all of them can be traced back to the idea of giving the best value and highest quality possible. The manufacturers of "WW" Poultry Fencing mine their own ores, operate their own blast furnaces, open hearth mills, rod and wire mills, etc., in short they control every step in the manufacture and therefore can regulate the quality from the beginning to the end. Nothing but the best is allowed to pass.

Made in one and two inch mesh horizontal wires one gauge heavier than all other makes.

THE FEATURES: Horizontal wires in truss formation are two sizes heavier than cross wires. At intersections the wires are completely twisted, avoiding hinging tendencies and openings by unwinding that are common with other makes. Will hang straight and tight between posts without affecting width, not requiring rail or board at top or bottom.

NOTE THE DURABLE AND PLEASING APPEARANCE.



Prices Attractive. Write for Proposition.

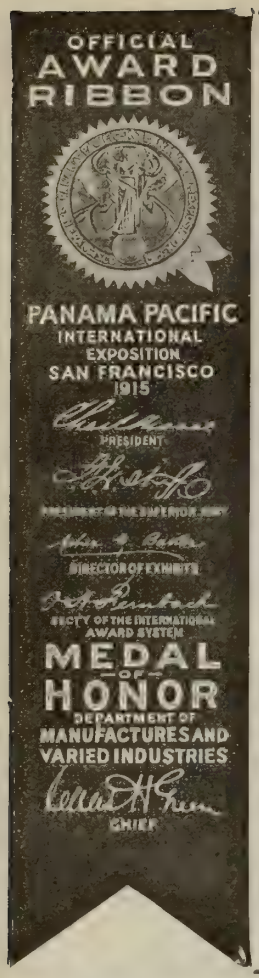
You'll find "National" Hinges easier to sell

Place a "National" Strap or "T" Hinge alongside one of any other make and you'll quickly recognize the added selling value of the "National." The same evidence of care and attention to detail that has earned "National" Hardware the preference with competent builders everywhere is seen in these goods. They are well-balanced, easy working, nicely finished, and the screwholes are sharply cut and well counter-sunk.

The superiority of "National" Hinges is so apparent as to materially assist in the selling.



"National" Wrought Strap and "T" Hinges are made in four styles:—Plain Steel, Japanned, Sherardized and Sherardized with Brass Pin. Strap Hinges pack approximately from 10 dozen pair per barrel in the 14-inch size to 250 doz. pair in the 3-inch size. "T" Hinges pack approximately from 7 dozen pair per barrel in the 14-inch size to 200 dozen pair in the 3-inch size. Also packed, if desired, one pair in a box, with screws.

If you had a "National" Catalog you could find a number of good reasons why you should stock "National" goods.

A Convincing Test

"Not the slightest taint or odor was to be found in either milk or butter"

No. 3¼ made in ash, birch and oak; outside measurements: width 39", depth 21½", height 55½"; ice capacity 150 lbs.

"Onions, Fish, Salt, Matches, Milk, Butter, Fruit and Cigars were inspected and placed in one provision chamber at 12 o'clock on July 22nd. The doors were locked and sealed. After 24 hours, on examination, the temperature was 38 F. Not the slightest taint or odor was to be found in either the milk or the butter. The salt and matches were perfectly dry. The matches struck readily on the interior of the Ice Chamber.

(Signed) J. H. Edmison, Member of Provincial Board of Health.
" E. C. Bier, City Health Officer Board of Health.

If perfect preservation of foods sells refrigerators, this test shows you the road to good business results, meeting the growing demands for

Some Features:

A perfect syphon and air circulating system (patented). Eleven walls to protect ice and maintain low temperature.

Sanitary drainage.

Vitreous porcelain linings.

No moisture. As a proof, matches can be lighted on ice chamber walls.

Will preserve any and all foods, without mixing of odors.

The Barnet

We challenge comparison with any refrigerator on earth, in regard to results.

We want to tell you about our exclusive syphon circulation and ventilation system; also many other convincing advantages explained in our literature.

Write to-day for full particulars and attractive selling proposition.

The Barnet syphon system of refrigeration has no equal. It appeals to the very best trade, and necessarily commands a higher price. To provide a complete line, we also manufacture a low-priced refrigerator which gives satisfaction and is good value for the money.

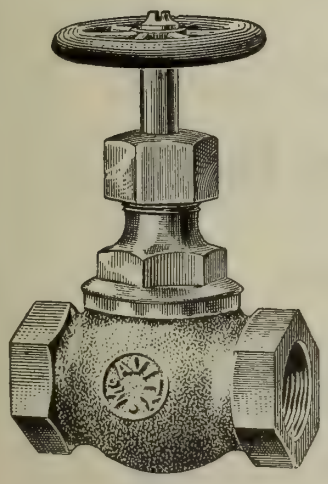
Put an Electric "Reliable" in your window



A Reliable Churn operating continuously in your window, say all day Saturday, would attract the attention of practically every farmer and his wife who were in town. A machine in operation always has a great attraction for the average person, and this greatest of all butter machines would certainly draw a big crowd to your window. Display cards could emphasize the cleanliness, speed, capacity and labor-saving features of the "Reliable," and a well-worded invitation to "come in and examine" would land many possible customers in your store. Your salesmanship and the Churn itself could turn most of these "possibles" into orders.

You can operate an Electric "Reliable" all day every day for a month at a cost of less than $1. Isn't this form of advertisement worth the price?

RUBBER SYSTEM
AND ASSOCIATED COMPANIES

Extra Service

The service to be gained from any rubber product depends largely upon the quality of the material and the excellence of the workmanship. That is why Dominion Rubber System products are outstanding. Only the best in material and workmanship is incorporated in the making of those products. That ensures long service and life and proves a matter of no little economy to the buyer.

Over half a century of continuous manufacturing has taught the Dominion Rubber System how to produce qualities that will "stand up" under any circumstance, and, as a result, the products that carry the name and brand of the Dominion Rubber System are looked upon as the standard by which to judge qualities and values throughout Canada.

For anything in Rubber, write to our nearest Branch, where prompt and intelligent attention will be given to all enquiries.

Income Forms Must Be Filled at Once

Government Requires All To Be In By March 31 — Effect of Same on Hardware Dealer—Right to Make Proper Allowance For Depreciation — Necessity of Knowing Personal Withdrawals

NOW that the time is rapidly approaching when the income tax forms must be mailed to the Government at Ottawa there are no doubt some problems which would bear further interpretation. One of these is the definition of the term income. Forms are to be secured from the nearest post office and must be filled out by March 31. Those who may have neglected to look after this matter should attend to the matter without delay.

Definition of Income

Under the terms of the Act "income" means the annual net profit or gain or gratuity, whether ascertained and capable of computation as being wages, salary, or other fixed amount, or unascertained as being fees or emoluments, or as being profits from a trade or commercial or financial or other business or calling, directly or indirectly received by a person from any office or employment, or from any profession or calling, or from any trade, manufacture or business, as the case may be, and shall include the interest, dividends or profits directly or indirectly received from money at interest upon any security or without security, or from stocks or from any other investment, and whether such gains or profits are divided or distributed or not, and also the annual profit or gain from any other source, including the income from but not the value of property acquired by gift, bequest, devise or descent, and including the income from but not the proceeds of life insurance policies paid upon the death of the person insured, or payments made or credited to the insured on life insurance endowment or annuity contracts upon the maturity of the term mentioned in the contract or upon the surrender of the contract.

How Income is Reckoned

From the definition it is evident that profits, whether left in the business or withdrawn in the form of living expenses, salary or dividends are taxable. In other words a man in business, whether by himself or in partnership with someone else, has to reckon his total income on the following basis:

1. Amount withdrawn for living expenses whether paid out in salary form or otherwise.

2. Profits withdrawn from the business, whether in the form of dividends or other withdrawals.

3. Shares or profits remaining in the business and not divided among partners.

4. Any other income derived from any other source than that of the business such as dividends on stock, interest on money in banks or out at investment and so forth.

Unfortunately many retailers do not keep an accurate account of their withdrawals for living expenses. When money is wanted for any purpose too often the till is opened and the required amount withdrawn without any charge or accounting of the amount.

As living expenses will have to be included in the estimate of the year's income, how can a man give a certified statement of what these were when he has kept no track of same and really has no accurate knowledge. This is merely another reason why a merchant should pay himself a salary the same as he does to any of his clerks and include in that salary not only cash withdrawals but also articles taken out of stock for personal use. The result may be surprising. It may have been thought that it was costing about a thousand dollars a year to live, whereas it may actually cost twice this amount.

AMOUNTS PAYABLE UNDER INCOME TAX

Incomes exceeding $1,500 in case of unmarried persons and widows or widowers without dependent children and exceeding $3,000 in case of all others, four per cent.

Following are the supertaxes levied in addition to regular tax as above:—

Over $6,000 to $10,000, two per cent.
Over $10,000 to $20,000, five per cent.
Over $20,000 to $30,000, eight per cent.
Over $30,000 to $50,000, ten per cent.
Over $50,000 to $100,000 fifteen per cent.
Over $100,000, twenty-five per cent.

Corporations and joint stock companies pay the normal tax upon income exceeding $3,000, but are not liable to pay the supertax.

Should Allow for Depreciation

The other part of the income tax bill that is worthy of attention is the undivided profits of the business. It is only fair that certain allowance shall be made for depreciation on merchandise, on accounts and on fixtures and furniture. On the forms which must be filled out there is a space provided on page 3 for such deductions. The hardware dealer is entitled to make these deductions sufficiently comprehensive so as to put his profits on a cash basis. By this we mean that the profits of a retail business that are left in the business in the form of increased stock or fixtures should not be considered in the same light as profits withdrawn from the business in the form of cash, or as the income of the large salaried man who draws his salary every week or month as the case may be. Profits of a business should be reckoned as nearly as possible upon the realizable value of the assets of the business and the retailer is entitled to make allowance to put himself in this position. Of course this depreciation allowance will have to be clearly shown in the form sent in to Ottawa. It should be remembered that large amounts are being set aside as a reserve by all large businesses and corporations at the present time and the retailer is entitled to do the same.

"We Shall Be Victors"

So Asserts Elbert H. Gary, Chairman of United States Steel Corporation—But Present Must be Filled With Better Organization—Prepare For Keen Rivalry After War—Time Now For Economic Progress

"I AM an optimist, even in these times. There is, as always, a silver lining to the clouds which now obscure our vision. We need not despair. We have reason to be hopeful. Right will prevail over might, and reason will overcome madness. We shall be victors in the mortal combat that rages. And afterwards our country will make longer and faster strides in the struggle to maintain a deserved and satisfactory position in the ranks of nations." In these words Judge Elbert H. Gary sums up the present situation as he sees it, during the course of a thoughtful address before the Commercial Club on "Business Problems During and After the War." The opinion of this industrial leader will be welcomed at this time by Canadian business men. His speech is well worth reading.—Editor's Note.

IN the midst of the most bitter and destructive of all wars, it is appropriate that the leading business men turn attention from the absorbing and overwhelming cares of their usual daily life in order to permit a careful and sober survey of questions which affect not only the progress but the very existence of national and individual life, for the result of the pending conflict will be controlled by economic conditions. It is a time for plain and frank expression of opinion, not with a selfish fault-finding spirit, but with the desire to aid in bringing about wise action.

Germany Strongly Entrenched

From the beginning of the war there has been a lack of information on the part of the general public in the countries opposed to the Central Powers. Probably this is natural and necessary in war times for reasons not important to consider at this time. The existence of many facts is, however, well known, and from these there is cause for anxiety and fear. The most convincing circumstance from the outset has been the location of the opposing armies. As they move backward or forward they demonstrate success or failure, as a rule, regardless of individual features of a battle or a campaign. About the 20th of August, 1914, the Paris papers, whose publications were censored, made the brief statement that the battle lines on the western front were still on the Somme. This was the first information to the French public that the German forces were within fifty miles of the River Somme, and the effect of the abrupt announcement may be imagined, for it meant that the enemy was rapidly approaching the city of Paris, and this illustrates the want of knowledge throughout most of the countries. Notwithstanding, claims of progress have been made by the Allies from time to time, many of which have been justified, though others were made in a spirit of bravado or with the purpose of creating sentiment, the fearful facts remain that at the end of nearly three and one-half years the armies of Germany and Austria are fighting on foreign soil and are in the possession or control of territory and of avenues to the Persian Gulf, which, if held—considered from a pecuniary standpoint alone—would justify them in commencing and carrying on the war with all its costs and misery to their people.

Germany Would Like Peace Now

Prussian Germany is in control of the German Empire, of the Austrian Empire, of Turkey, Roumania, Servia, Albania, the most of Belgium, a large area of the best and richest part of France, Poland, and a considerable portion of Russia, a substantial section of Italy, and much other territory with large quantities of iron ore, coal and other minerals, and also food products. The natural resources under the dominance of Germany have been augmented many fold since the war commenced, and they are increasing.

The disposition and effort of the enemy have been to advance, to retain, to rob, to destroy what could not be appropriated and utilized, to levy tribute, to mar and maltreat, to intimidate and to drive from home the innocent, to defy the laws of God and man on land and sea, to laugh at reason and to mock at justice, and the general advancement on his part up to the present time has been almost uninterrupted. Naturally Germany would like to bring about an armistice, peace and settlement at once and under these conditions. She could well afford to withdraw from France and Belgium, Luxemburg, Poland, Italy, Roumania and Servia, if permitted to control Turkey, Armenia and the route to Bagdad, and with her strength, military, financial and commercial, unbroken.

Germany Still Going Strong

Germany is more virile, more efficient, more determined and aggressive than she was at the beginning of the war. As a nation, if she wins in the near future she will be stronger financially, industrially, commercially, militarily, and with a comparatively small reduction in the number of men, notwithstanding the loss of millions of soldiers. Although as to some of the statements made on the subject we may have believed them exaggerated, we have reached the conclusion that preparation for war and for a dominating influence by Prussian Germany throughout the world has been in progress for many decades. Her armies now occupy an inner position, the best and most effective for war purposes, with faces to the front, fully equipped thoroughly trained, ably officered, adequately supplied, having transportation facilities for rapid mobilization and transfer of troops, munitions and foods, ready and able to defend against attack from the outside and, by sudden and efficient advance, to take and possess additional territory. And it is a mistake to suppose, as sometimes proclaimed, that the soldiers of the enemy or their weapons of warfare are becoming less proficient or that they will not further improve. The brains, the study, experience, patience and persistence of the German character, which have resulted in the production of efficient officers and soldiers, military strategy, destructive cannons, guns, ammunition, gases, aircraft, seacraft, methods and provisions for defence, utilization of heretofore unknown materials for food and munitions, are still available and will be devoted to the production of better facilities for satisfactory offensive and defensive warfare. There will be more healthy and more skillful soldiers, even more competent officers, bigger and more destructive cannons, submarines and aircraft and safer entrenchment. Germany is not idle or dilatory.

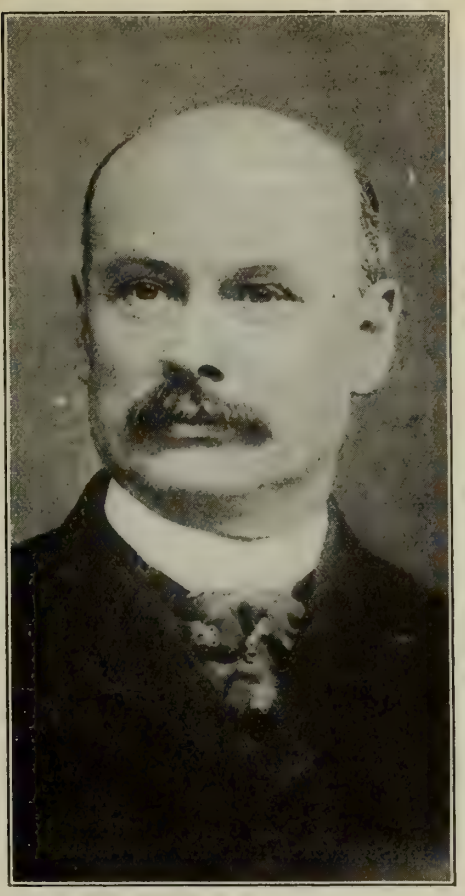
Trying to "Russianize" Other Countries

In addition to what the enemy has constructed and will improve for physical contest, there has been built up a system of intrigue, esponiage, poisoning of the human mind, the distribution and application or use of germs of disease and physical impairment. There has been agitation tending to discredit and defy the law and to create trouble between employer and employee, and between different classes such as the world has never before witnessed and with all this goes the most malignant and unconscionable effort to destroy property and life by fire or poison or other means, and to impede and interrupt the wheels of industry. This is increasing and will continue to increase. And the Prussians have perfected a centralized, comprehensive, powerful business organization which, considering its size and ramifications, has never before been approached. Their programme boldly contemplates the subjugation of various nations separately, either by force of arms or other means. It is probable the Russian

revolution and its consequences were planned in Germany and have been financed and directed by German money and brains. She is now endeavoring to "Russianize" several other countries.

A war policy which recognizes no God, except by pretence, no law, no justice, no mercy—nothing but the right which brute force commands—has a decided advantage, physically over those whose principles are humane, honorable, Christian. These antitheses are represented by the opposing military forces of the pending struggle. Up to date the armies of the enemy have not only been victorious, but they believe themselves to be invincible, and this adds to their strength and efficiency.

Facing the Facts



We are appalled, though we are not stunned by these conditions. Our determination is unshaken, our teeth are set. We have been forced into the war and we are fighting in self-defence. So far as we are concerned it is a combat between Prussianism and Americanism, between might and right. Considered by themselves, the existing conditions are not pleasant; they are dangerous though not desperate, they compel one to fear Americans are confronted by a long and ruinous war, destructive of life and limb and of mental, moral and physical health, devastation of property and diminution of wealth.

This picture of war conditions, as presented, is not pleasant to look upon but it is not exaggerated and it stares us in the face. We have been slow and stupid, or at least indifferent. We have not realized and do not yet realize the full extent of the dangers which threaten us, and in this respect there is little difference between the citizens of the various parts of the United States or of any locality. Our country as a whole, including the several branches of government, does not yet appear to appreciate that in order to win in this war it is necessary to appropriate every ounce of energy, every dollar of wealth and every atom of skill within reach, to be drawn against when needed, and to offer every sacrifice, even of personal opinion or pride or desire for advancement of the interests of individuals or political parties. Of course every one has decided that every other person ought to subject personal ambition to the demands of the public welfare, but larger numbers go no further. This includes you and me, and it does not exclude others occupying more conspicuous places in the nation's registry. But this is only one side of the canvas.

Primary Essentials to Victory

If we are going to continue in the war against Germany, with all her power, we may well ask ourselves what is necessary for a defence against this modern monster of despotism, tyranny, destruction and oppression, and also whether or not we are able to meet the requirements.

The primary essentials to victory are food, transportation, arms, barracks, aircraft and seacraft, munitions, fuel and men, and also money to pay the cost of

ELBERT H. GARY
Chairman United States Steel Corporation.

providing all these elements of strength. And of greatest importance is an organization competent to co-ordinate and systematize all the forces within reach. It is requisite that each of the allied nations, and of all of them combined, be possessed of such an organization and system, but just now we are considering our own country by itself.

Against our desire we were finally forced to become a party to the war, and now we shall be compelled to carry a very large part of the war burden.

Can Raise Food for 300,000,000

As to foodstuffs, the United States is capable of producing continuously sufficient quantities of all the essentials for health and vigor required to support three hundred million people, and that without adding materially to the present facilities. Because of extended latitude, diversity of climate and soil, we can raise every variety of grain, vegetables and fruit needful for the armies or for civilians. There are many things to be considered in the attempt to accomplish these results. The most scientific methods under the general supervision of the Secretary of Agriculture and his aids, the best tools and machinery and the application of demonstrated rules for propagation and protection are requisite. There is no reason why the crops should not be as large per acre in this country as in the best sections of other countries.

We can produce meats of all kinds in increasing abundance, beef, pork, mutton, fowls and fish, provided advantage is taken of the latest discoveries for the prevention of diseases peculiar to the different species, which have heretofore caused destruction but are now well known and may be overcome.

Eggs, milk, butter and cheese can be furnished almost without limit.

Shibuilding Materials Ample

Transportation on land and sea is of high importance so far as the support of armies is concerned, and ships are the first to be considered at present. The raw materials in this country desired for shipbuilding for the next one hundred years and more are ample, and the tonnage capacity completed or to be finished within a short time will alone exceed the average destruction during the last year of ships belonging to the Allies. If necessary it can be doubled within twelve months. Railroad facilities, though deficient in many respects, are in much better shape than shipping. More engines, cars and tracks must be supplied, but there is no lack of raw materials.

Of ores, fuel, coal, wood and oil and all other raw material there is no shortage.

That this country has enough money, or its equivalent, to cover all requirements, there is no question. The approximate figures have often been published. We have one-half of the gold and two-fifths of the wealth of all the nations. Our productive capacity is far in the lead of all others. Our credit is unlimited and always will be if we triumph in this war and if we make the most of our opportunities. Plenty of money can be secured by taxation and by the sale of government securities at reasonable rates, if good and discriminating judgment is used after consulting competent bankers and other business men.

Labor is scarce and growing more so, although there are employed large numbers of American women who are doing their full share in both civil and military lines of activity in accordance with their strength.

Better Overspend to Prepare

Now it is manifest that in order to render the assistance that is asked of us and which seems to be imperative, we must have more and more men for soldiers and workmen, skilled and unskilled. We cannot produce the quantities or amounts demanded unless the number of men is materially increased, nor unless all who are willing to work are permitted to do so to the extent of their reasonable capability and desire. There is a shortage of labor in the shops, the factories, the mines, the office. Production even up to the present capacity cannot be secured unless more workmen are employed. And for the building of increased productive capacity and for the operation of the same, additional men must be procured.

We may be excused for having been slow in getting ready for defence against unjust attack, even since August, 1914

but there can be no justification for failure in the future to push vigorously and without unnecessary interruption in every department of the Government preparation for assisting the allied forces to carry on and to win the war by the utilization of everything that is valuable for war purposes. Expenditures had better be too large and preparations overdone than to risk the danger of neglecting to provide any single item that might add to the military strength of the aliled forces.

Labor Situation Serious

The weakest spot in our situation is lack of sufficient production of the things that are vital to the life and strength of the armies, which might be obtained except for the scarcity of labor. It would be unwise, nay unpardonable, if this shortage shall not promptly be remedied. This question at present is of commanding import.

This country has an advantage over all others in time of war or peace by reason of her natural resources and accumulated wealth, but it is not of full practical value unless the agencies for production and use are sufficient. To the extent that workmen are lacking in number to a corresponding degree are wealth and raw materials without value. It is questionable whether, when an abundance of ships are built there will be trained men and machinery in ample numbers and quantities, and in the case of battleships, adequate supplies and munitions.

The labor question is one which employers are sometimes reluctant to discuss for fear of misinterpretation of motives, but in war times every question which bears vitally upon the conduct and termination of the war should be considered frankly and fairly by the employer, the employee and the public generally. Each is equally interested. Each is entitled to protection and the rights of none should be neglected, although the necessities of the general public are always of primary importance.

Lest anyone might conclude that I have in any respect changed my views as heretofore expressed concerning labor generally, I may be permitted to say: Workmen should always have fair, just and liberal treatment. They should be paid good wages, taking into account the service rendered and all conditions which reasonably apply. The welfare, safety and health of the men and their families should receive careful attention by employers. Relief funds for the results of accidents or old age should be established. All men, of all grades, ranks and nationalities, should be permitted to work when and where they please and on terms that they agree to. The laws should impartially protect both capital and labor and permit imposition or abuse by enither.

Efficiency and Abundance to Save Men

The precarious conditions already adverted to compel the United States to do everything within its power to bring the war to a speedy and victorious close. We insist our soldiers shall not be placed in the trenches or on the firing line unless and until they are completely hardened, trained and equiped, and that they shall always be furnished with sufficient supplies to protect them and preserve their health. The fathers and mothers of this country have given their sons in defence of our beloved land. These men are entitled to every practicable effort on our part to assist them, and this without one moment of unnecessary delay. Efficiency, abundance and promptness will save millions of men and billions of money.

To the extent needed for the purposes named, the United States should immediately, under proper conditions and reasonable restrictions, draw from the islands of the sea and from oriental countries, enough men, including soldiers and sailors, to meet every emergency. There would be no difficulty in obtaining within a short period large numbers of strong, healthy, intelligent, loyal men for civil or even military duty, and the number could be increased from time to time as required. All who are acquainted with the facts know that we need more men and that we can get them if we are so disposed. If legislation is requisite Congress should act without delay.

Delay Dangerous

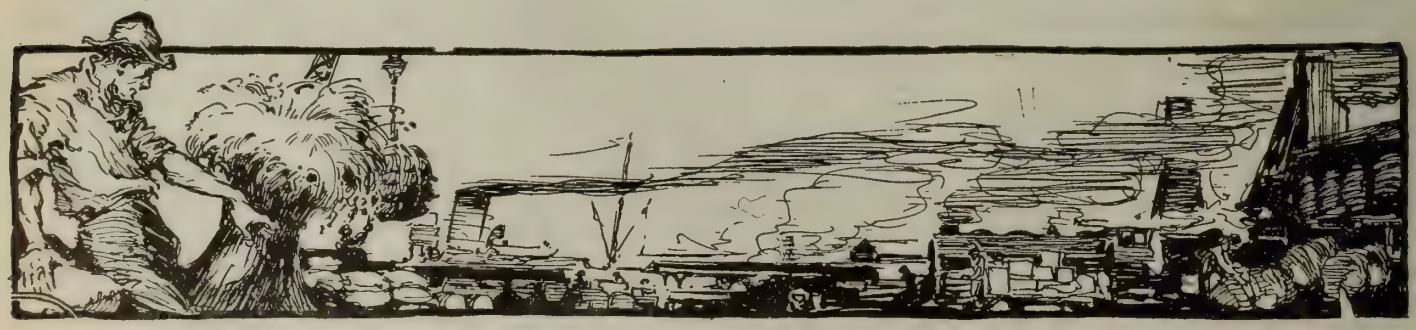
There may be, there already have been, objections to the admission of certain nationalities, even temporarily and under carefully considered restrictions. These have been persistent, especially by foreigners who heretofore have settled in this country.

But the thing to do first is to win the war; to stop the spilling of blood, the destruction of the lives and health of our noble and loyal men and the unjustified depletion of our resources. We can discuss and properly decide other questions later. If we now delay we may not have the opportunity to consider the other matters.

And still, if objections are raised and discussed, they can be fairly met, and with good reasons, in addition to the one of war's necessity, which is undebatable. At any rate they are not fundamental nor of much consequence by comparison.

Greatest of All Business Undertakings

The Government of the United States is now engaged in the greatest of all business undertakings. There has never been anything like it. It is a venture that may well cause anxiety and fear on the part of those who are responsible. There is always possibility of friction in the wheels of the machinery. There is danger of extravagance, waste, neglect, hurtful delays, unnecessary antagonisms between departments or individuals, wrongful interferences with each other or with private management. The wonder is that irretrievable blunders of great magnitude have not already been made. It seems apparent that such an organization and system as have been suggested are being perfected. The people of this country are confidently expecting it and would not be satisfied with less.



Presumably those in authority are taking counsel of the ablest and most experienced men in order to reach decision and determine action. Advice from the wisest and most experienced, whether adopted or rejected, is of the highest importance in any great organization.

Conservation and proper application of our resources, with discrimination and wisdom, are of immediate concern. For instance, it would be a grave error to deprive our citizens of enough fuel to keep them alive, or our manufactories from raw or semi-finished materials indispensable for the full production of the things required for war purposes, while, at the same time, permitting public places, such as theatres and other buildings, devoted to amusement, and even churches and schools, to remain open by the use of these things which produce heat and light. There are hundreds of cases where this argument would be pertinent.

No Grounds for Pessimism

If we conclude that the means of victory within a comparatively short time are within reach, then there is no ground for pessimism as to the long future. If we prepare, even over-prepare for a long and desperate war we shall only have done what ordinary prudence requires. It is to be sincerely hoped that the war will end suddenly as it may for reasons we do not see, and that hundreds of millions will eventually prove to have been unnecessarily expended, that, in acting on the safe side we have gone further than we would if the future had been known.

We believe the war will end vic-

toriously for the allied forces within two or three years, we hope in a much shorter time. It could not terminate in favor of the other side within a decade, for with all the means at our command we would fight for that period or longer before we would submit to the despotic rule of an autocratic tyrant.

So sure are we that we will be perfectly organized, that the management will be of the highest order and that the war will be brought to a successful conclusion, we are justified in considering with care and anxiety the world's business affairs growing out of and following the war.

Laws for Protection of Industry

First of all the nations will have constructive laws for the protection of industry, for the fostering and promotion of legitimate enterprise, for freedom in the application of brains, and in the use of capital to the full extent necessary. Everything requisite to victory in the international contest for financial and industrial position will be permitted by legislation.

And there will be plenty of ships with ample power and speed, well manned and supplied. With liberal rules and regulations they will be prepared to transport at lowest rates, and ready to engage in the export and import business, which is desirable and profitable. There will be organization, system, intelligence and dogged persistence, stores, offices and warehouses located at the best points throughout the world, all devoted to the most important branch of a nation's progress and prosperity. No stone is now or will hereafter be left unturned to the neglect of the largest measure of success.

An Eye on Future Trade

The necessities of the war, while it continues, will not be minimized nor neglected; they are and will be of principal importance, but they do not hide the one most consequential question of providing food and raiment and shelter after the war. These countries, respectively, will have the moral as well as legal right, as it will be their national duty, to act selfishly, to disregard, so far as may be legitimate, the pecuniary interests of all other countries. There is little doubt England, our very good and valuable friend, through chambers of commerce or representatives, is planning for her commercial future, even in extreme rivalry with the United States, her friend in equal degree. In a recent address Sir Albert Stanley, President of the Board of Trade, said the English Government was giving serious attention to the trade problems which would confront England after the war; that America would then find a stronger and keener competitor. And the same is true of Japan, our firmly established friend and business coadjutor. Germans in large numbers have been acquiring substantial property interests in Mexico (and probably in other countries on this continent) during the last year. Undoubtedly the German people have completed large numbers of mer-

chant ships for use after peace is established. Whatever the result of the war may be, Germany will be ready to engage in a vigorous contest for overseas trade, even extending into the United States. As she prepared for war, so she is preparing for peace.

Preparation for Keen Rivalry

What is being done, what will be done to place and to keep the business affairs of this country, domestic and foreign, up to the standards of other countries? Naturally, we have a decided advantage over others in wealth and resources. We can continue to be the leader, financially and industrially, if we only will. Our business men, while devoting their attention, time and money to the military requirements of the country should have in mind preparation for the future. It is their duty, as it is their right, to deliberate and then to offer suggestions. Everything possible should be done by us to assist the Allies during this war, and every reasonable preparation should be made for the protection of our industry in times of peace.

Time for Economic Progress

We shall be met with the fullest preparation and the fiercest competition on the part of others, and we must likewise be in condition to protect our interests and to push our claims for a fair share of the world's business; in fact, such parts of it as, by reason of geographical locations or otherwise, naturally would come to us if ready and prepared to absorb it. There will be an opportunity for economic progress, which, if neglected, may never return; surely not within the near future. Our rivalry will be keen and aggressive, but it will be fair and reasonable. The same attitude on the part of our competitors we shall have the right to demand. And whenever they seek to co-operate with us, then, so far as compatible with the principles of equity and propriety, we ought to reciprocate.

It is to be hoped the supplies of this country, men or property, will not be used to our detriment, for the main purpose of benefiting any other country or countries during or after the war.

Legislators, as well as business men should, even now, give heed to future trade problems, for of great importance is legislation which will place our country on a parity with all others in the protection of our domestic trade and the extension of our foreign commerce. Foreign trade is beneficial to all countries. It furnishes necessary supplies, and it also provides an outlet for surplus products. It has a decided influence in maintaining stable and fair rates of international exchange, and it affects the amount of gold reserves. Other governments will, by legislation, aid, in every proper way, their business interests to expand and prosper—many have already arranged for this; and our Government should do likewise. An intelligent person seeks opportunity to profit by the experience of others.

Abundant Facilities Needed

And all this applies with equal force to a post-war period. To occupy a proper place in the world's economic forum, our country, by a wise policy, should permit, and even encourage, the building up and maintenance of wealth and of production and transportation capacity proportionate to the great and increasing resources of the country as compared to other countries. Abundant manufacturing and transportation facilities on land and sea and lakes, supported on a living basis, ably and properly managed by private interests, are what a prosperous country should have.

During the last decade or longer the policy of the United States has not been favorable to conditions which at present are deemed wise, proper and necessary.

We Shall be Victors

Therefore I am an optimist, even in these times. There is, as always, a silver lining to the clouds which now obscure our vision. We need not despair. We have reason to be hopeful. There is sunlight beyond. Right will prevail over might; and reason will overcome madness. We shall be victors in the mortal combat that rages, and afterwards our country will make longer and faster strides in the struggle to maintain a deserved and satisfactory position in the ranks of nations. The business men of the United States, in the management of their affairs, have reached a high level of efficiency and moral excellence. They are at present of incalculable assistance to the government and they may be depended upon to do their part in restoring the world's equilibrium after peace shall be proclaimed. We are proud of our country. Let us continue to give our country reason to be proud of us.

Does Jobber Help Meet Mail Order Competition?

United States Hardwaremen Discuss Points at Convention in Boston—Jobber Secure in Some Places—Some Stores Train Employees

EFFICIENCY of employees was one of the subjects which the recent survey of the National Retail Hardware Association, covering twenty-one States, undertook to cover at the Boston convention held during the month of February. An attempt was made to grade the efficiency of the workers, and 1,266 out of 1,912 dealers reported their forces efficient. This is substantially the number reporting special activities to train employees, while the number reporting "no training" of employees nearly corresponds to the number of "fair" and "inefficient" store crews. In 392 stores personal instruction is given; in eighty-one there are store meetings; 107 have "talks," 109 supply trade papers, and 10 send their men to conventions.

Cost of Doing Business 17 Per Cent.

The average cost of doing business was found to be 17.242 per cent. of the capital invested, and 891 stores out of 1,795 kept their cost below the average, 126 doing business at a cost of less than 10 per cent. of the capital stock. A score of concerns running their cost up to between 30 and 40 per cent. brought the average cost to a rather high level, and it is a fair assumption that cannot be tested by material in hand that the high cost comes within the group reporting "no special training" and "lack of efficiency" among the employees. Both the highest and the lowest costs are found among the smallest concerns, ranging from 4 to 37 per cent. This range in cost of doing business grows smaller when the medium-sized affairs are reached. Among the concerns capitalized between $50,000 and $75,000 none reported a higher cost than 24 per cent. and none lower than 7 per cent., while above $75,000 the cost went as high as 26 per cent. and as low as 6 per cent.

Effort to Eliminate Jobber

Another vital topic brought under discussion by this survey of the hardware trade is the position of the jobber. Within the trade there is an effort to eliminate him by the creation of co-operative trading, whereby the retail dealers pool their buying strength in a community. The bona-fide jobber in the hardware trade has come under the scrutiny of the survey. Does he help meet the catalogue house competition? That is a vital question with the retailers, but in that respect the jobber was not found to rank very high, for 1,405 stores reported that he is of no help and only 230 had found him to be a decided help; 144 more were willing to concede that he was not wholly useless to them. The 230 who had found him helpful reported that he could secure better prices for them, produced better goods, gave better service and advertised the goods. In 1,774 stores answering the questionnaire relative to jobbers' special brands there were 762 that featured these brands either because of quality, exclusive sales, guaranty, prestige, service, demand, better profits or because these jobbers' special brands were well advertised.

Amount Set Aside for Advertising

In this connection it might be mentioned that advertising expenses are not inconsiderable in the hardware trade, and it appears that many of the retail dealers allow for this purpose definite percentages of their sales up to 10 per cent. It was a small number that went as high as 10, but many make it 5 per cent. of the sales, still more make it 2 per cent, and the largest group makes it 1 per cent. Nationally advertised goods were reported to be increasing in demand, according to the experience of 835 stores, whereas 796 stores were unable to report any increase through that specific source.

Jobber Secure in Some Places

Especially in New England the jobber is assured and his position. Densely populated districts require many stores, and these stores cannot afford to carry a complete stock in sufficient quantities to meet all demands and they cannot deal directly with all the manufacturers whose goods they carry, so they look to the jobber to keep them stocked up. It is true that his intervention as a middleman adds an item to the cost of handling, but it is equally true that if he were eliminated it would cost the retail dealer still more to secure his goods from the manufacturers with sufficient promptness to give such service as customers demand on a competitive market. It is to squeeze out the jobber that the dealers in some communities are forming their co-operative buying agencies, but they are only a small factor in the market as yet.

Watch Out for the Wine Measure

Its Use is Banned and Inspectors Are on the Warpath—The Part of Wisdom to Look Over Stocks and See That Nothing Illegal is Carried

AS NOTED some little time ago in these columns the United States liquid measure or wine measure as it has been known is under the ban.

J. J. McConvey, inspector of weights and measures, advises CANADIAN GROCER that there will be immediate action on this matter and that any one selling goods under this measure will be charged with a breach of the act. Conviction on this charge involves a fine of $20 for each offence.

This ruling has been in force for some time, but there has been a laxness in its enforcement. As a result there has grown up a feeling that these wine standards are actual legal measure, and many a merchant is handling them in all good faith. That, however will not be a sufficient plea to protect against the result of any infringement of the act. The department has given full warning of their change in attitude, and inspectors have been called upon to carry out the strict letter of the law.

It would be a wise move under the circumstances for the merchant to go over his stock and make sure that there is nothing on his shelves that would come under the condemnation of the terms of this order, for if he does not the chances are that he will be a poorer, and it is to be hoped a wiser, man, for this regulation having been brought sharply to the attention of the department's inspectors, it is only natural to suppose that they will be keenly on the alert for any infringement of this particular law.

Any goods put up in the United States in liquid measure will probably be in that measure, while there have been a good many cases when Canadian goods have also been put up in this measure. It looked well to call the container a gallon, and it was more or less profitable when this gallon was 20 per cent. short of the gallon standard. It has grown too common a practice and the lid is to be clamped down.

These are the points to remember:

The sale of anything in Canada by Wine Measure is illegal.

The offering for sale of any goods of which the contents are solely marked in some unit of United States Measure is illegal, e.g., "1 Pint U.S.A. Standard."

Representing unmarked container goods as pints, quarts, etc.. when their contents are actually United States Measure (Wine Measure)is illegal.

Packages and container goods may be put up and sold without any reference to the measure of the contents, or the contents may be indicated by weight in pounds or in ounces, but if any reference whatsoever is made to the contents by measure IT MUST BE IN DOMINION MEASURE.

And here is the section of the law that bears upon this question:

"Weights and Measures Act," Chap. 52, R. S., 1906, provides as follows:—

Sec. 24. Every contract, bargain, sale or dealing made or had in Canada, in respect of any work, goods, wares, or merchandise, or other thing which has been or is to be done, sold, delivered, carried or agreed for by Weight or Measure, shall be deemed to be made and had according to one of the Dominion weights or measures ascertained by this Act, or to some multiple or part thereof, and if not made or had, shall be void, except when made according to the Metric System.

Sec. 60. Every person who sells by any denomination of weight or measure other than one of the Dominion Weights or Measures, or some multiple or part thereof shall be liable to a penalty not exceeding twenty dollars for every such sale.

TO HOLD CLEAN-UP DAY FOR BICYCLES

The immediate result of the reorganization dinner of the Toronto Bicycle Dealers' Association at the Carls-Rite Hotel, on Thursday evening, March 7, was the decision to hold a clean-up day in the local bicycle trade. The bicycle merchants present also decided to proceed with the drawing up of a suggested repair charge list, and special emphasis was laid on the subject of price suggestions this year because of the unsettled state of the market.

At the suggestion of Percy A. McBride, it was decided to petition the Government for some relief from the order which prohibited the use of any electric light in store windows. This order had been enforced in Ontario for the past two months, and the bicycle merchants were losing a great deal of business, particularly with the spring revival in sales.

Thirty-six members of the local trade were present at the dinner, and some very fine addresses were heard from a dozen speakers. In an impressive declaration President R. G. McLeod stated that he was determined to stamp out the petty jealousies which had been hampering the local bicycle business for years. He was also going to do all in his power to have better and brighter bicycle stores in Toronto. Some were exceptionally clean establishments, but he was actually ashamed of the others.

B. B. Halladay referred to the necessity for mutual confidence, and he pointed out that every dealer should make it a point to clean and change his windows at least once each week, regardless of the shortage of labor and the rush of business. A. E. Humphrey declared that the bicycle business was a profitable one, but general improvement could be made in store management. Few dealers knew the cost of goods, and only a few really kept books. Many were not securing a fair margin of profit. George E. Grove, past president, thought that a local association was more necessary this year than ever before because of so many price changes. Walter Andrews declared that it was the small dealer who benefits most through an association because he is able to learn the ideas of the big men in the trade. Secretary W. M. Gladish urged that dealers should "talk bicycle" rather than talk about their competitors or about rival lines. If a dealer minded his own business properly he would have no time to meddle in the affairs of others.

A committee was appointed to draw up new suggested repair prices. The next general meeting was called for Thursday, March 21. A special trade expert will be secured to address this meeting.

JAPAN PREPARES TO MAKE "FIREPROOF" CELLULOID

Anouncement is made by the Bureau of Foreign and Domestic Commerce of the United States that it is in a position to give information of the Japanese firm which is making a so-called incombustible celluloid in Tokio. Consul-General Scidmore reports that correspondence received in Japan indicates considerable American interest in the substitute for celluloid, which has been invented by a professor in a Japanese university and for the manufacture of which a company has been organized. The factory buildings are now in course of construction, and it is planned to begin in April of this year, or soon after, the manufacture of waterproof cloth and composition tiles, buttons and insulators. As soon as machinery ordered in the United States arrives the manufacture of imitation leather, linoleum, stained glass, marble, lacquers and varnishes will be started. Patent rights have been obtained for the process in Japan and have been applied for in Great Britain, France and the United States. The product is not perfectly fireproof, but it does require considerable heat to kindle and it burns very slowly.

WILL SAVE $600.000 BY ARRANGEMENTS FOR TINPLATE

It is stated now that arrangements have been made which will permit of Canadian food packers securing a fair share of the available tinplate that will be required for the pack during the present season. Representations that have been recently made are likely to have been resultful.

The price paid in the United States at the present time is around $7.75 per 200 pound box, and this will be made the basis for the Canadian prices, it is said. Certain other charges will require to be added to this figure of course.

Purchases will be made by the Ottawa Government in accordance with the requirements of the various canners. A list of the requirements will be prepared and collected from all those entitled to allotments and the tinplate will be distributed in due course as received.

In making these arrangements it is expected that the amount of saving which can be effected will reach at least $600,000, and this may help to increase interest in production—a most vital thing the coming season.

Since the announcement in HARDWARE AND METAL last week to the effect that supplies of tinplate would be available for Canada, the information has appeared in the daily papers.

NOW IN NEW PREMISES

The Wrought Iron Range Company have moved into new premises at 149 King Street West, Toronto, where they have added 800 square feet additional to their showroom space. The new showroom and store is just east of their former location. An additional two stories have been added to the new location at the rear. The showrooms have been refitted through with mahogany showcases. One of the advantages in their new location is to give them connection by archway with their factory in the rear. A W. Caldwell, manager of the company, is an enthusiastic member of the King Street Improvement Association which has recently been formed. Mr. Caldwell has the distinction of taking out the first membership in the association.

Store Windows May be Lighted Saturdays

Some Improvement of Conditions For Users of Hydro Power —Power Controller Makes Change in Answer to Merchants' Appeal

THE regulation requiring the users of Hydro power to discontinue the use of window lights in their stores, and to maintain only such entrance lights as were necessary for safety, proved such a burden, and had such a disastrous effect on business in many districts that, as was reported in HARDWARE AND METAL recently, energetic representations were made to the Power Controller by the Retail Merchants' Association, pointing out the hardship and actual loss that was entailed by the regulations, and asking for some alleviation of these conditions.

As a result of these activities some slight measure of relief has been obtained. The usual store window lights may be maintained in stores on Saturday nights until the time of closing.

This change, while it is not by any means as far-reaching as might be hoped, will be of some assistance. The change asked for was that stores might be permitted to have some light in their windows and curtail an equal amount from the store lighting proper. This request was not granted, however, in full, and the permission to light the store windows on Saturday evenings is the best change in conditions that it has been possible to obtain to the present.

EDITORIAL COMMENT

DAYLIGHT SAVING VERY NECESSARY

IT IS to be hoped the Dominion Parliament will pass without delay the daylight saving bill which Sir George Foster has given promise will be brought before the House. This should be one of the first things to receive the attention of Parliament when it meets this month.

There is an overwhelming sentiment in favor of the daylight-saving scheme when carried out in a national way. Last year the efforts along this line were local and were confined to certain districts. The trial was sufficient to prove that it would be a popular measure if adopted throughout Canada. The only way to have it adopted by the country as a whole is to have Parliament take the initiative in the matter.

A very cogent reason why daylight saving should be adopted in Canada is given in the report of the English Parliamentary Commission, which investigated the practical operation of the plan in Great Britain and shows there has been an important and highly significant decrease in the percentage of accidents as the result of the change. It is asserted the greater percentage of accidents in industrial establishments occur during the latter part of the day, and are traceable to fatigue and poor lighting.

Hardwaremen will be quick to perceive that the campaign for production will be assisted by daylight saving. This should mean increased sales of gardening tools.

The United States Congress has under consideration a bill to make daylight saving effective for five months from April 1. Great Britain already has it in practical operation. France also has adopted the plan. Canada cannot afford to be backward in this movement.

WILL STEEL PRICES BE LOWER?

THERE is much interest manifested in the new prices which are to be fixed by the War Industries Board of the United States. The period over which the present prices extend expires on March 31. It is asserted the War Industries Board is of the opinion that prices should be lower. The United States Steel Corporation, it is understood, has shown commendable patriotism in being anxious to produce for the Government at present prices.

Many of the independent steel mills have asserted that the question of price fixation involves the very existence of some of them. They assert that lower prices could not be made effective without crowding them to the wall. They are of the opinion that higher prices should prevail if any change is made.

It is pointed out that the production of all the steel plants is urgently needed at this time. The advantage which the Steel Corporation has lies in the fact that it controls large sources of supply, of raw materials, including ore, limestone, coal, coke and to a considerable extent transportation. Independents, on the other hand, have to go into the open market to purchase these commodities.

It is anticipated the price will be fixed for a period of from three to six months dating from April 1. Manufacturers and others in Canada will watch with keen interest the outcome of price fixing on steel products.

SCARCITY AS A RESULT OF FIXING LOW PRICES

THE fixing of prices too low, it is now admitted by the *Daily Mail*, London, has resulted in scarcity in England. It further admits that officialdom has blundered because it would not take the advice of the merchants or utilize their organizations or the existing distributing agents. It says:

"Mr. Havelock Wilson, the merchant sailors' spokesman, who has never been afraid to say what he thinks, made a day or two ago a statement of great interest. He said that after going up and down the country for the past four months he had been unable to find the "starving poor" who are the staple just now of a good deal of loose talk.

Mr. Wilson, we believe, was right. So far it is not the poor who have been hardest hit by the war, but the middle classes, the people with fixed salaries and incomes that are no larger than before the war. They have suffered, and are still suffering, proportionately, more than any class in the community, and they are suffering in silence.

Of course the Food Controller cannot legislate for them alone. His function is to make food as plentiful and as evenly distributed among all the people of the British Isles as circumstances permit. Roughly speaking, that can only be done by encouraging production. But the Ministry of Food has never, apparently, made up its mind whether abundant supplies or artificially lowered prices were the goal to aim at.

Fixing prices too low results in decreased production. In instance after instance—beef, rabbits, beans, butter, are cases in point—the Ministry seems to have fixed maximum prices at figures that have scared away producers and importers and diminished supplies. That looks like tackling the problem at the wrong end. Given a stimulus to production and prices can largely be left to take care of themselves. But nothing can undo the mischief of a policy that under the pretext of cheapening food really operates to drive it out of the market.

Where officialdom has blundered in this matter it has usually been because it would not take the advice of the merchants or utilize their organizations and the existing distributing agencies. This was very clearly shown in the recent report of the Commercial Committee of the House of Commons. The manufacturer has been comparatively well treated by the government, though there is nothing he looks forward to more eagerly than the day when he will be free from the fetters of bureaucracy. But the merchant has been cold-shouldered and frequently boycotted; his desire to be of public service has met with a grudging response; and many of the mistakes in the handling of the food problem have been due to a failure to make the most of the expert knowledge that was ready to hand."

Current Events in Photograph—No. 11

A MAMMOTH FIGHTING AEROPLANE

ITALY has been well in the van of the discoveries in aeroplane construction. Here is one of the newest developments of this marvelously developing science. This great battle plane will help the Allies hold the line in North Italy. It is known as the Caproni Triplane. These three planes differentiate it from the well-known biplane type that has grown so familiar. Its great wing spread gives it an enormous lifting power. The size of this giant fighting machine may be judged from a comparison with the scouting machine on the right.

GERMANY CORNERING PLATINUM

Germany is taking advantage of the peace negotiations with Russia to buy up every available ounce of platinum, according to advices received by the United States Government. Officials said to-day that undoubtedly the Germans were badly in need of the platinum, but their intention doubtless also was to keep the United States and other allies from obtaining the important metal.

The Germans were said to be paying any prices asked without haggling.

Competition for platinum among the nations has become one of the keenest commercial struggles of the war. Officials say it is one which affects the war programme most vitally, for without it munitions and many kinds of delicate electrical instruments essential to war machinery cannot be made. Tanks are immobile without platinum for contact points of magnetos, and signal instruments are dumb without the metal.

Supplies of platinum in the United States amount to between 25,000 and 50,000 ounces, most of which will be taken over by the Government under the commandeering order issued recently. While that amount seems sufficient for present needs the country is short of iridium, a constituent metal of platinum, which it is used to harden. There is not an ounce of iridium for sale in America to-day. Last sales of iridium were made at $185 an ounce and of platinum at $90.

With Russia, the world's principal platinum market, closed by German control, the use of platinum for jewelry is expected to cease after present stocks in the hands of manufacturing jewelers are exhausted. Those stocks have not been taken over, one reason being that approximately 8,000 men in New York and Newark depend on platinum work for livelihood.

The possibility of increasing American production of platinum is being studied in the emergency. Heretofore, Nevada, California, Utah and Oregon have turned out about 750 ounces a year, which geologists believe can be increased to 3,000 ounces.

COAL SHIPMENTS INCREASE

Reports on the movements of freight cars during January and February show that for the six weeks ending with February 17 the Canadian railways hauled 4,314 cars more from the frontier than they had hauled in any previous six weeks from the same district. If it is assumed that 50 per cent. of this increase consisted of coal cars the amount would mean an increase of coal hauled into Ontario of approximately 2,500 tons a day. Weather conditions have been a very material factor in affecting the movement of freight, the number of cars varying from day to day according to the prevailing storm conditions.

High Record Set by Seed Prices

Corn Practically Unprocurable and Red Clover Prohibitive in Price—Bad Weather Conditions, Resulting in Short Crops, the Cause

THE seed situation this year is rather a serious matter. Faced with the need of maximum production, seed products are in many instances exceptionally scarce; in some one or two important instances almost unobtainable; and in practically all important varieties appreciably higher in price.

Probably the most serious situation of all is that of corn. The excessive rain of the early season was a serious element in corn situation, this followed by early frosts practically ruined the crops. Moreover, the enormous production of the United States was also badly hit by frosts, so that only a very limited proportion of it is fit for seed. Moreover, the United States Government has placed an embargo against its export. It is early yet to state definitely what effect this embargo may have. It is possible that there may be more seed corn in the United States than will be required for the American farmer. In that case there is a possibility that there may be some corn available later in the season. This is a far-away hope, however, and there is no great amount of faith placed in this forlorn chance. One seed authority states that there will be in the Province of Ontario only one-third the usual sowing of corn for seed purposes, and there is not much chance that conditions will be better in the other provinces.

Ensilage Corn Available in Small Quantities

Ensilage corn, which, of course, was also a failure in Canada, is being obtained in small quantities from the United States. The supplies available from this source, however, are very limited, indeed. All corn coming from the United States is consigned to the Canadian Government Purchasing Board, and by them distributed to the seed houses. That is a rather roundabout method that involves a good many difficulties and only a nominal profit, as the seed houses are only permitted to get 5 per cent. profit on car lots and 7½ per cent. on less than car lots.

Red clover is almost prohibitive in price. No. 1 is quoted at $42 to $43 per hundred, and No. 2, $39 to $40. Even at these figures there is little anxiety to sell, as stocks are almost unobtainable, and some seed houses are not even quoting, but are merely selling on day-to-day prices. There is a possibility that as the season advances some of the primary holders of red clover seed may become panicky, and there may be a slight decline, but conditions are such that no very substantial decline is even within the realms of possibility. One well-informed seedsman states emphatically that he does not expect to see red clover go lower than from 38c to 40c a pound at any time this year, and it is possible that it may not touch those figures.

There is a very strong probability that these price conditions will prevent many farmers from sowing this seed. This possibility seems to be borne out by the fact that there has been a substantial increase in buying of other seed where prices are not ranging so high. Both alsike and timothy are available in good quantities at reasonable figures, No. 1 alsike selling from $26.50 to $28, and No. 1 timothy at $12 to $13. Also there has been a largely increased demand for alfalfa, which sells at 22c to 26c a pound. Sweet clover, too, is in unusually good demand at a price of from $29 to $30. It is expected that there will be an increased sowing of these lines and a very limited sowing of red clover.

Root Seed at High Figure

In root seeds the same conditions prevail—a pronounced scarcity and abnormally high prices. Turnips probably head the list. Here, again, the failure of last year's crop is largely to blame, while short supplies on other markets make it next to impossible to make up the deficiencies. There were no turnips to grow for seed this year, and as a result there is a famine in this product. Moreover, this is not a temporary situation. It is generally believed that it will take three years to again build up a necessary supply.

Turnip seed in small quantities is selling at from $1.25 to $1.50 a pound; beets and mangolds range at 65c to 70c a pound; carrots at from $1 to $2.25.

Parsnip and Onion Seed at Record Figures

White beans are at from $10 to $12 a bushel. Parsnip is exceptionally high at $2 a pound. The same applies to all grades of onion seed, which are selling at $4 to $4.50 a pound.

Garden seeds are in a trifle better situation; at least they are available. Lettuce is at about $1 a pound; beans, 30c to 35c, and garden corn at prices ranging from 20c to 30c a pound.

There are, of course, a number of conditions accounting for the unusual situation in seeds this year. The unsatisfactory weather of last fall is, of course, the most important. This applies not only to Canada, but to the United States as well. Then, of course, railroad congestion has added another difficulty that has been hard to overcome, while the natural curtailment of the sources of supply on account of the war has limited the possibilities of compensating for a poor crop in one section by a better one in another.

Generally speaking, there is little likelihood of any better prices than those mentioned on this page, though it is possible that there may be a slight weakening as the buying season draws to a close.

Is There Hardship in Scrap Metal Embargo

Dealers Can Sell For More in Canada Than They Would Get in United States—Simply Measure to Keep Supplies in Canada

ANNOUNCEMENT was made from Ottawa during the first part of present week that an embargo had been placed on shipment out of Canada of supplies of scrap iron with a view to conserving supplies of raw materials of iron and steel, which are easily convertible for manufacturing purposes. The United States prohibited the export of scrap iron some time ago and in view of the scarcity of these materials in Canada it was deemed advisable to stop issuing license for export.

Asserted Dealers Complain

One of the Toronto daily newspapers asserted that dealers in scrap metal claim that an injustice has been done them by reason of the embargo. The newspaper in question asserted that the dealers claimed there was a difference of $16 per ton in the price of scrap metal in Canada as compared with the price in the United States, and that they face a serious financial loss by having to sell their scrap in Canada.

Conditions in the markets do not bear out these statements. The price of No. 1 scrap cast iron at Buffalo is quoted at $32 to $33 per gross ton of 2,240 pounds and at Cleveland $30 per gross ton. One of the large users of scrap metal in Toronto had occasion recently to make a purchase of some three hundred tons of scrap iron. He found it rather scarce and finally secured a quotation from Winnipeg at $32 per ton of 2,000 pounds. The purchase was made on that basis, f.o.b. Winnipeg. When the difference in weight between the gross ton and net ton is taken into consideration it will therefore be seen that sellers in the Canadian market are getting a higher price than is being paid in the United States markets.

OPEN UP NEW STORE

Hingston Smith Arms Co., Limited, 491 Main Street, Winnipeg, have opened up a retail store on Portage Avenue. They will retain the Main Street store for both retail and wholesale business.

Fifty Years With Wholesale House

Michael Horn Has Driven the Elevator For Rice Lewis & Son, Toronto, For Over Twenty-three Years—Still Active and Energetic—Tells of Early Days in Toronto

MICHAEL HORN, elevator man with Rice Lewis & Son, Toronto, is this month receiving congratulations on having been with the company for fifty years. "Mike," as he is familiarly called by his numerous friends, started as a worker in the iron yard of the company. He filled various jobs until he became elevator man some twenty-three years ago. Since that time he has been the faithful pilot of people travelling from the nether to the upper regions in the building of this wholesale firm. Mike was born in Kings County, Ireland, in the neighborhood of seventy-five years ago. Until last year when he had a term of sickness for some three months Mike was never absent a day from his employment in the whole fifty years. Shortly after he cast his fortune with Rice Lewis & Sons Mike was married. "Employment was uncertain in those days," said Mike. "When I got the chance of a steady job I stayed with it. We had a family of eight children, five of whom are still living. In the days when I came with the concern Toronto had no street car service. And the streets were in pretty bad condition at that time. Often it was necessary to get planks to help a wagon out of the mud. The section down by the Don was known as 'Cabbagetown.' People in that district were troubled with ague a lot. The dampness and poor drainage of parts of the city made ague a common disease. Living in those days was cheap, but money was hard to get. Potatoes sold at 25c a bag. Pork and beef sold at 5c per pound. Butter was 10c per pound and eggs 10c per dozen. For 5c you could get enough turnips to last you for weeks."

Mike said he was getting somewhat tired of running the elevator but the high cost of living at present made it necessary to keep on the job. His many friends have been extending congratulations on his long service and express the hope that he will see many more years of service.

MICHAEL HORN
Who has been with Rice Lewis & Son, Toronto, for fifty years.

KENNEDY OF THE "MERCURY"

He became well known as "Kennedy of the 'Mercury.'" He wrote prose, verse, and human editorials and paragraphs with a punch in every line. His editorial page was read from coast to coast with appreciation of its character. Kennedy had seen a good deal of the globe before he got into an editorial chair, but he never stopped chatting things over with the world and asking: "Whatd'ye think of it, ol dman?" And being a man who was chummy with old Mr. Earth didn't mean for Kennedy that the seamy side was all the world could show. He wrote of cabbages and kings and church choirs; in fact, we believe he led or conducted a church choir, like Middleton of the Toronto "News." There is nothing to prove it against him that he sang tenor, however.

Now Kennedy has gone to Toronto to look after the general editorial management of "Canadian Machinery" and two others of the great MacLean chain of publications. We must congratulate MacLean's on having "picked a live one." He will always be found with his shoulders thrown right into the collar, his judgment will be sound, and his trajectory as steady as his aim is certain. Kennedy is a versatile journalist who is certain to be heard from in the big league. And there is no doubt that he attracted men who will carry on with the "Mercury," and continue to make it as good a newspaper as Kennedy in a large way helped to make it.—"London Advertiser."

Mr. Kennedy was what is known in the printing industry as a machinist-operator. He then joined the staff of a daily paper as a reporter, and gradually worked up to the managing editorship of the Guelph "Daily Mercury," a paper which from its inception has been recognized as one of the leaders in the smaller daily field.

Mr. Kennedy is a brother of J. B. Kennedy, now master mechanic of one of the large machine shops in the United States.

WHOLESALE HARDWARE WIPED OUT

A dispatch from Saskatoon stated that the wholesale hardware house of the J. H. Ashdown Company in that city was totally destroyed by fire on Sunday morning last. The building was valued at $100,000 and the stock at $500,000, making a total loss of $600,000. It is understood the company will rebuild and temporary quarters have been rente the meantime.

MANUFACTURED PLATINUM NOT AFFECTED

The Council of National Defense of the United States has issued the following statement supplementary to its statement of Friday, March 1, 1918, which dealt with the steps that the Government had taken to control the production, refining, distribution and use crude and refined platinum for the period of the war:

The council wishes to state that in issuing Ordnance Requisition No. 510, commandeering crude or raw platinum now in the hands of importers or refiners of this precious metal, it is to be understood that this commandeering order does not apply to or interfere with the purchase by the consumer of any manufactured articles containing platinum.

This explanation is made so that the public may clearly understand the purpose of this action by the Government.

TO LIMIT NUMBER OF PAINT SHADES

Following the lead taken by the Canadian paint manufacturers some time ago, which was announced in HARDWARE METAL, the paint manufacturers of the United States will limit the number of shades of paint and will eliminate several sizes of containers. The announcement was recently made by the United States Council of National Defence. The decision was made following a conference with the paint manufacturers. After July 1, manufacturers making as high as 100 shades of house paints will limit the number to 32 shades. Enamels are to be restricted to eight shades, floor paint to eight, roof and barn paint to two, shingle stains to twelve, oil colors to thirty, carriage paint to eight, architectural varnishes to ten grades, marine varnishes to four. In some instances this will mean a reduction of 5 per cent. or more in the number of colors. The idea is to conserve tin and linseed oil and other ingredients of paint necessary to conduct of the war.

EVENTS IN THE TRADE

BUSINESS CHANGE

W. D. Samson, who has been in business in Blenheim township for some 41 years, has sold his hardware stock and interest at Ridgetown, Ont., to Shillington Company, Limited. The latter company has recently taken out incorporation papers.

Letters patent have been granted to change the name of Smart-Woods, Limited, to the Woods Manufacturing Company, Limited. The company has branches at Welland, Montreal, Toronto, Ottawa, Winnipeg.

The Vokes Hardware Limited, Toronto, have bought out the entire stock of mantels and tiles handled by the T. Eaton Co., and it is said now have the biggest stock of these lines in Canada.

Sceptre, Sask.—Shields Bros., hardware, have sold out.

Semans, Sask.—G. F. Botterill, hardware, has sold his tinsmith business to A. L. McKay.

Ogema, Sask.—Moffett & Robertson, hardware, have been succeeded by D. B. Robertson.

Gravelbourg, Sask.—Chard & Begin, tinsmiths, etc., have dissolved. J. E. Chard and A. J. Begin continue.

Montreal, Que.—American Paint Supply Co. has dissolved. S. Herscovich continues under same style.

Florence, Ont.—Hardware firm of Tripp & Sinclair has been purchased by E. C. Elson.

Peterboro, Ont.—Members of the firm of Mackenzie, Milne & Co., Ltd., hardware, have retired. P. Paton of Montreal, general purchasing agent for the Canada Steamships Line, is representing other interests which are purchasing the stock of the company.

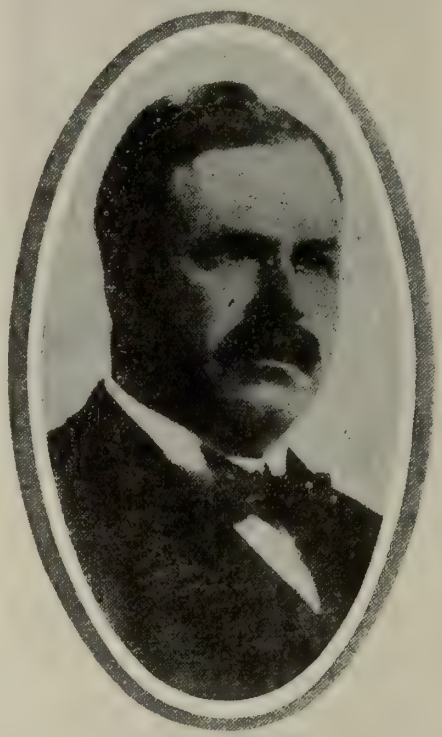
Letters patent have been issued to the Empire Cream Separator Company, Limited, of Halifax, to increase their authorized capital from $300,000 to $1,000,000. The company manufactures milking machines in addition to cream separators.

Quinton, Sask.—Rettig & Cavers, hardware, have been succeeded by Geo. Rettig.

Montreal, Que.—T. C. Collins & Son, commission hardware, have dissolved.

Montreal, Que.—W. L. Haldimand & Son, commission hardware, have dissolved.

PERSONALS



Lieut. Frank P. Vokes, son of Miles Vokes of the Vokes Hardware Store, Toronto, has been wounded at the front.

Richard Moore, of Benjamin Moore & Co., St. Louis, was elected president of the Manufacturers' Association of St. Louis at the recent annual meeting.

George T. Goodrow has been appointed general manager of Benjamin Moore & Co's Chicago office. H. A. Melum is his assistant.

W. L. Pattinson, one of the J. H. Ashdown Hardware Co.'s travelling staff, has gone overseas. His fellow-travellers presented him with a wrist watch on his departure.

J. W. Crowley, who was formally with the firm of W. L. Haldiman & Son, Montreal, has joined the staff of Alexander Gibb, manufacturers' agent, and will represent him on the road. Alex. Gibb, Jr., has joined the Radia Telegraph Service, and is at present in Ottawa completing his course of instruction before proceeding overseas.

J. D. McGREGOR

Hardwareman who is a Member of New Canada Food Board.

OBITUARY

Phillip Grannan, stoves, tinware, etc., St. John, N.B., is dead.

Robert Horne, hardwareman, of Sudbury, will have the sympathy of numerous friends in the hardware trade in the death of his wife, which took place in Toronto General Hospital on Monday, March 11.

FIRE LOSS

Winnipeg, Man.—Geo. Stambler, hardware, has suffered fire loss.

INCORPORATIONS

St. Catharines, Ont.—McKinnon-Columbus Chain, Ltd., has been incorporated at Ottawa by L. E. McKinnon, D. S. Brisbin and W. A. McKinnon, all of St. Catharines, Ont., to manufacture chain and metal products of all kinds at St. Catharines, Ont., with a capital of $1,000,000.

NEW BRUNSWICK NEWS NOTES

Tenders are being called for the stock, etc., of the business of James Knox, St. John, ship's hardware, etc., which is being wound up following the death of the proprietor, John Walker Knox.

J. J. McCaffrey, of Fredericton, who secured control of Concrete Builders, Limited, recently has also purchased the Fredericton Concrete Company's plant, and will merge the two companies. The plant at Devon, across the river from Fredericton, will be continued and enlarged, the operations involving an expenditure of about $50,000. M. W. Black will be the manager of the new merger.

At the annual meeting of the shareholders of the Record Foundry & Machine Co., Ltd., of Moncton, held last week, the directors reported very satisfactory progress during the year, the payroll now including 250 names. The old board of directors was re-elected, with the exception of F. G. O'Grady, of Montreal, who has resigned, and who is succeeded by W. L. Maltby, of Montreal. Other directors are Hon. F. C. Robinson, F. W. Sumner, Hon. Josiah Wood, James Barnes, F. J. Shreve and J. T. Cornell. Officers were elected as follows: President, Hon. C. W. Robinson; vice-president, F. W. Sumner; secretary-treasurer, F. E. Dennison; auditor, Robert Carter.

CAMPAIGN FOR BUILDING

Under the leadership of the Windsor Board of Trade merchants of the town, including hardware merchants and lumber merchants, has taken the initiative in a campaign to encourage bulding n that district. At a recent meeting held for that purpose a publicity campaign committee was appointed to take the matter up. It was felt that in view of he scarcity of dwellings at the present time that it was opportune to get such a campaign started. The opinion prevailed that all that was needed was encouragement along this line.

Varnish Company Reorganizes

Dougall Varnish Co., With Head Offices in Montreal, Selects New Officers—Changes Necessitated Through Death of Former President

THE Dougall Varnish Company has recently reorganized its staff, necessitated through the death of its former president, J. S. N. Dougall, whose demise was referred to in HARDWARE AND METAL of Feb. 9 and 16.

On March 1, 1918, Harold Dougall was elected to fill the vacancy thus caused. A son of the former president, Harold Dougall, began his connection with the varnish trade as an office boy with this company in the year 1902. He first went on the road as the firm's representative in 1906, and has since represented them in this capacity until his election to the presidency.

The death of the former president necessitated a second change, and W. W. Ingersoll has been elected to fill the position of vice-president and secretary. Mr. Ingersoll is also a director of the company.

The connection of Mr. Ingersoll with the Dougall Varnish Company dates from 1909. Previous to this date he was a representative in the United States for the Murphy Varnish Company of Boston.

In the year 1909 the Dougall Varnish Company withdrew from the United States and came to Montreal. At that time Mr. Ingersoll was selected as sales manager and later appointed manager, which position he held until the recent reorganization, with the appointment made as above referred to.

Since the Dougall Varnish Company opened for business in Canada many additions have been made, and the present development has been brought about through the acquirement of various other concerns, some of which had United States connections previously.

W. W. INGERSOLL.

Recently elected Vice-President and Secretary of the Dougall Varnish Co.

MONTREAL NEWS NOTES

S. J. Manheimer, with Kaufman Bros. & Bondy, New York, pipe manufacturers, has been calling on the Montreal trade this week.

T. H. Jordan, vice-president of A. C. Leslie & Co., wholesale metals, Montreal, is spending ten days or so in Western Ontario points, and will also call at some United States points.

J. G. Lorriman, manager of the marine paint department of the Brandram-Henderson Co., is visiting the trade in the Maritime Provinces this week, and will be away for some little time.

W. A. C. Hamilton, sales manager for

HAROLD DOUGALL

Recently elected President of the Dougall Varnish Co.

the Consumers' Cordage Co., of Montreal, is a visitor this week to Western Ontario points, including Toronto.

T. C. Kirby, manager of the Montreal sporting goods dealers' new organization, has returned from Boston, where he was in attendance at the recent motor show, and which he reported to have been very successful.

John R. Anderson, manufacturers' agent, Montreal, was in Western Ontario points last week and returned Monday. Mr. Anderson is planning a three weeks' trip, during which time he will cover the Maritime Provinces in the interests of his firm, going as far as Prince Edward Island.

R. H. Jamieson, of R. C. Jamieson & Co., paint manufacturers, who left Montreal in 1914 for the front, has returned home. As Major Jamieson he went with the First Overseas Contingent and was connected with the 13th Battalion, and has seen much active service during the war.

D. J. Barratt, retail hardware merchant, of St. John's, N.B., was a Montreal visitor this week.

H. A. Croxall, representing the National Hardware Company of Orillia, was calling on the Montreal trade in the interests of his firm.

Mr. Everitt, representing Harmon & Dixon, of New York, was in Montreal this week calling on the trade.

Raymond Reister, with the Beaver Company of Ottawa, has been in Montreal this week.

HARDWAREMAN ON FOOD BOARD

James D. McGregor of Brandon, Man., one of the members of the new Canada Food Board is a member of the firm of Mitchell & McGregor, hardware merchants, of that city. Mr. McGregor has been named Director of Agricultural Labor on the new board. The other members of thee board are Henry B. Thomson, who is chairman of the Board and Director of Food Conservation; Hon. Charles A. Dunning, Director of Food Production. The following powers are vested in the board:

(a) To expend any sums of money approved by the Governor General in Council for any of the purposes aforesaid.

(b) To co-operate with the Provincial Governments with a view to co-ordinating the activities of all local bodies for the aforesaid purposes.

(c) To enter into agreements for the cultivation of idle land on such terms as may appear to the board to be advisable.

(d) To utilize and direct the co-operation in the work of the board of any member of the outside service for the purposes of publicity and of securing information.

(e) To mobilize and utilize on a voluntary basis the farm labor resources of Canada.

(f) To make such regulations consistent herewith for carrying out their duties and for the internal economy of the board, as the board may deem advisable.

In addition to being a successful hardware merchant Mr. McGregor has been a farmer and rancher in a big way, and devoted considerable attention to raising pure-breed cattle. The new body succeeds the office of Food Controller.

INDUSTRIAL NOTES

Montreal, Que.—The National Motor Show of Eastern Canada is being held this week under the auspices of the Montreal Automobile Trade Association on the third floor of the Almy Building.

Sydney, N.S.—The Sydney Foundry & Machine Co. contemplate moving their plant to a new site on the water front. A shipyard will probably be established at the new site.

Gananoque, Ont. — The Gananoque Spring and Axle Co. expect to have their axle-hammer shop in full operation in about ten days' time, as reconstruction necessary after the recent fire will be undertaken immediately the fire loss has been adjusted. The fire will in no way affect the company's spring business.

PROSPECT OF HARDWARE SECTION FOR MERCHANTS' ASSOCIATION

The prospect that a new sub-section, composed of the members representing the hardware and metal business and also one for the master plumbers, will be organized in connection with the St. John branch of the Retail Merchants' Association was held out in the annual report of F. P. Alward, acting provincial secretary in a report submitted at the annual meeting of the local branch this week. The five existing sub-sections—three of which were organized during the year—have fully demonstrated their usefulness to the members. During the year visits of the Dominion president, treasurer and secretary had stimulated interest and aided in increasing the activities of the organization and the prospects for the coming year were said to be even better than for the preceding year.

The treasurer's report showed an improvement in the financial position of the branch, and the report of the last Dollar Day showed it to be one of the most successful yet held.

Resolutions were adopted in favor of Dominion-wide daylight saving, recommending that bread should be wrapped at the bakeries, and in support of the fight which the city is making against the proposals of the N. B. Power Company to increase all its rates for the public utilities controlled by the company.

Officers for the year were elected as follows: Honorary president, A. O. Skinner; president, F. W. Daniel; first vice-president, A. E. Everett; second vice-president, S. C. Young; third vice-president, J. H. Vaughan; treasurer, M. E. Grass; secretary, Thomas F. Drummie; additional members of the executive, G. M. Ross, H. Mont Jones, D. J. Barrett, S. E. Fisher, H. C. Brown, William Hawker, George I. Walker, J. H. Marr, C. H. Smythe, S. E. White, J. A. McKay, F. A. Dykeman, T. A. Armour, A. A. McIntyre, W. F. B. Paterson, H. W. Rising and I. Chester Brown.

MONTREAL BICYCLE MEN ORGANIZE

The following have been elected officers of the Montreal Bicycle and Motorcycle Association:—President, Art Ross; vice-president, R. A. Radmore; treasurer, J. McNeice; secretary, J. Holden, and manager, T. C. Kirby.

One of the first undertakings of this organization will be that of conducting a sportsmen's show. This will be held in the Auditorium on the corner of Bleury and Ontario Streets, May 4-11 inclusive.

It has been decided to give the proceeds to patriotic, hospital and other purposes, and it is stated that many applications for space have already been received.

Among the lines which will be exhibited are bicycles, motorcycles, side cars, motor boats, auto accessories and other lines of sporting goods.

For the forthcoming show the following committee has been appointed:—Messrs. Ross, Holden and McNeice. T. C. Kirby will be manager.

CATALOGUES and BOOKLETS

New Book for Advertisers

A sensible book on advertising is a thing to be hailed with satisfaction. Such a book is "Advertising," by E. H. Kastor, of H. W. Kastor & Sons, just published by the LaSalle Extension University, Chicago. The author has been in the general advertising business for twenty years, and has been in turn copy man, lay-out man, idea man, plan man, and campaign man. This book has been in preparation for three years.

Emphasis is laid on fundamental things—the study of the product, the study of the market, the mediums and their circulation, the psychology of the reader. There is an excellent discussion of advertisement Engilsh. The less important advertising methods all have careful consideration. It is, in short, a well-rounded presentation of the whole subject.

New Accessory Catalogue

Hyslop Bros., Toronto, have just issued their annual automobile accessory catalogue. The catalogue comprises 168 pages, and gives the complete line handled by this concern. A section of 64 pages is devoted exclusively to Ford specialties. The catalogue is not only attractive, but contains valuable information pertaining to the auto accessory business. It is now ready for distribution among the trade.

Bank Map Issued

The importance of supplying some accurate data to the public as to the extent and location of the branches of the chartered banks has been recogized by the Government, and an official publication known as the Bank Map of Ontario and Quebec has been issued by the Natural Resources Intelligence Branch of the Department of the Interior at Ottawa. A new edition—the third—of this useful map will soon be available to the public. This map may be obtained free on application to F. C. C. Lynch, superintendent of Natural Resources Intelligence Branch, Department of the Interior, Ottawa.

Booklet on Firearms

The Iver Johnson's Arms and Cycle Works of Fitchburg, Mass., has issued an attractive little booklet of twenty pages entitled "Modern Gunmen." The booklet is finely illustrated and shows the various models of revolvers and guns for the various uses to which they have been designed. Models shown for the yachtsman, the express messenger, police, camper, travelers and trainmen, the banker, the autoist and nightwatchman.

Booklet for Paint Dealers

A. Ramsay & Company, Montreal, have just issued a booklet entitled "Dealer Helps for 1918," in which the various advertisements that will appear during the coming year in various parts of the country is shown. The booklet shows a very attractive set of advertisements.

Folder on Fruit Canning Appliances

J. B. Timberlake & Sons, Jackson, Mich., have issued a six-page folder dealing with their fruit canning appliances, such as boiler trays, fruit jar baskets, jelly strainers. The pamphlet is well illustrated and gives a good idea of the lines carried by this concern.

CORRECTION

In the advertisement of the Johnson Halter Co., Sarnia, Ont., on page 12 of the March 9 issue of HARDWARE AND METAL, it was stated that the papier-mache display head would be furnished free to any dealer with an order for six dozen halters. The company, writing to HARDWARE AND METAL, states that the advertisement should have stated that this display head will be furnished free with eight dozen halters.

REDUCED HOURS, SAME WAGES

The Sheet Metal Products Co. of Canada, Limited (formerly the Kemp Mfg. Co.) and the Macdonald Mfg. Co., Limited, including branch factories and warehouses at Montreal and Winnipeg, have voluntarily reduced the hours of work from fifty-five to forty-eight hours per week with no reduction in wages. The new schedule goes into effect at once.

TRADE INQUIRIES

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1647. **Asbestos wick packing.**—A New York exporting house requires asbestos wick packing to be delivered at the rate of 20,000 pounds per month during 1918.

1649. **Formaldehyde, and acetone.**—A London company desire the addresses of Canadian manufacturers of wood distillation products, such as formaldehyde and acetone.

1651. **Oil, paraffin wax, bolts, nuts, etc.**—A coal-mining company in British North Borneo wishes to secure supplies of the following articles: Oil, rope oil, crank chamber oil, No. 1 engine oil, No. 2 engine oil, castor oil for engines, special compressor oil; paraffin wax in ¼-pound cakes, packed suitable for shipment; wooden pipe lines; bolts, nuts, rivets, wire nails, etc.; flat iron, square iron, round iron, angle iron, steel plates.

1653. **Iron and steel.**—A Johannesburg firm of engineers are prepared to take up Canadian agencies in pipings, mining machinery, railway supplies, machine tools, rails—light and heavy.

1654. **Copper and brass.**—A Johannesburg firm of engineers ask for correspondence from Canadian manufacturers of copper and brass goods suitable for mining and railway supplies.

1656. **Engineering agencies.**—An engineer with ten years' experience in Johannesburg is prepared to take up the Canadian representation of conveyors, cold storage machinery, engineering specialties, motor specialties and any line suitable for mining district.

THE CLERKS DEPARTMENT

HOW GARY QUALIFIED AS GREATEST EXECUTIVE

An Intimate Story of the Life History of the Present Head of the United States Steel Corporation

The following concludes an interesting and intimate sketch of the life story of Judge Elbert H. Gary, the president of the United States Steel Corporation, as told to readers of "Forbes' Magazine" by B. C. Forbes:

He not only had performed every task with painstaking accuracy, but had diligently used his brain to improve the system of conducting the business. He discerned that a great deal of time and labor could be saved by standardizing various legal decrees and orders of court, petitions, writs, etc., and having them printed instead of following the established method of writing each out by hand every time it was needed. He set about preparing the different forms and had them printed, leaving only blank spaces for names, etc. These forms are still in use to-day.

The labor and the thought devoted to their compilation was to bear fruit in a most unforeseen way later.

As another instance of the service young Gary was able to render his superior might be cited an occasion when a murderer was sentenced to be hung. When ordered to prepare a mandate for the hanging of this man, the Clerk of the Court was in a quandary, for he had never handled a murder case and had no idea how to prepare the necessary document or even where he could find a formula to guide him. In his dilemma he appealed to resourceful Gary. The latter had contrived to find time by working 12 to 14 hours daily, to dig into all sorts of ponderous legal tomes connected with court procedure and had acquired the nucleus of a substantial library. He burrowed into some early English volumes and there found the outliens of a form that could be used—much to the relief of the Clerk of the Court.

All this time he was saving every penny possible. It did not take him long to accumulate his first thousand dollars after repaying, with interest, the money his father advanced to put him through the law school. His ambition was to open a law office of his own as soon as he felt thoroughly equipped, legally and financially. So many lawyers began to come and consult him in regard to forms and rules of practice when they had any peculiar procedure to be followed that Gary decided he could probably earn a living on his own account.

Starts Law Practice

Colonel Vallette had meanwhile entered into partnership in Chicago with John Van Armin, one of the foremost lawyers of the day, and he suggested that Gary come with them. The young man had no intention of remaining merely an employee. So he asked: "On what basis?" He was offered a minor partnership with the choice of a small share of the profits or a salary of $1,200 a year with the privilege of doing business of his own. He acepted the latter arrangement and in the first year earned $2,800.

Then came the fateful Chicago fire of October, 1871. The whole of the office district of the city was burned. The courts were wiped out and all records and libraries of books were destroyed. The firm decided to dissolve forthwith.

Within twenty-four hours Gary opened an office and this shingle went up:

Elbert H. Gary, Lawyer

It was only one small room, and it was half a mile from the old office. But clients, including some lawyers, at once began to find their way to it. Every legal form had been consumed by fire, and how to draw up proper declarations was a problem too hard for most legal practitioners. They had not had either the same opportunity or the same occasion as Gary to saturate themselves with such exact knowledge—they knew that young Gary had distinguished himself in this field. He was able to sit down and from memory prepare almost any kind of legal form desired, and he had innumerable calls for this particular service during the days and weeks immediately following the fire.

Here again his special qualifications, born of hard mental work, were to bring an unexpected reward.

Two years later, by which time he had moved into larger quarters and had built up a considerable practice, he received this peremptory message from General Benjamin Sweet, Commissioner of Internal Revenue:

"Come to Washington. Start at once."

Called to the Capitol

In less than 60 minutes Gary was on a train bound for Washington. He did not take time even to go home or to provide himself with a satchel of clothing. On being ushered into the office of the high government official, Gary, after being complimented on the promptness of his arrival, was told that the work he had done in Chicago had made an impression upon Mr. Sweet, who had formerly practised law in that city. Then the commissioner explained that he had invested his fortune in partnership with two other men in property in Colorado, including a large tract of land and valuable herds of thoroughbred horses and cattle and sheep, and that differences had arisen because of the conduct of one of the partners, who was rapidly squandering the property and threatened to cause its entire loss.

"I want you to advise me what to do," concluded the commissioner.

Young Gary did not have time to reflect on the incongruity of the position—a veteran, experienced lawyer sending post-haste for one not half his age for legal advice.

"I could not advise anything without going to Colorado," replied Gary.

"I was hoping you would say just that. When can you start?"

"As soon as I get a clean shirt I can start back for Chicago and leave there to-morrow."

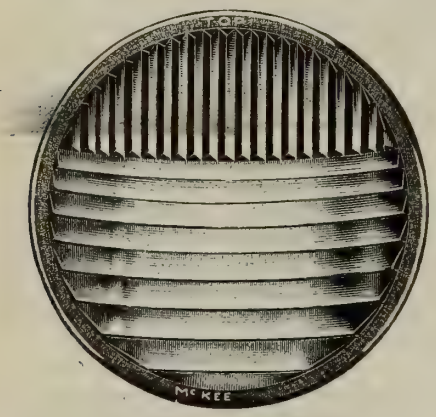
The moment he surveyed the situation in Colorado, Mr. Gary realized it was urgently necessary to file a dissolution of partnership and immediately enjoin the refractory partner from proceeding further with the dissipation of the property. Hurriedly drawing up the necessary papers, the lawyer found that the judge was located at Pueblo, fifty miles away. Thither Gary hastened, and on explaining matters induced the judge to give him an order for an injunction, endorsed on Gary's bill. The lawyer inquired where he could find the clerk. At Colorado City, he was told—fifty miles away. Off Gary went to hunt up the clerk and obtain the injunction writ and summons. The clerk explained that he had no forms there and would have to undertake a day's journey to procure them.

Initiative Wins

Gary was becoming alarmed, for his client's property was being sacrificed alarmingly and every hour's delay meant heavier loss. Why not press into service his exact knowledge of how to prepare a summons and write an injunction? He sat down and wrote out both documents, the clerk looking on in amazement. The clerk was even more astounded when, on reading them over, they appeared to be perfect. He signed them.

The whole matter was handled so successfully that Commissioner Sweet wrote the young lawyer a letter which is preserved to this day among the Gary family papers at Wheaton.

It was inevitable, of course, that a lawyer of Gary's calibre and industry should draw more and more clients. From his one room he moved into an office building erected after the fire at the corner of La Salle and Monroe streets, taking into partnership his older brother, who had also studied law and had succeeded Elbert as Chief Deputy Clerk of the Supreme Court. A few years later Judge Cody—he had been elected a Circuit Court Judge—was anxious to join the firm, and the name became Gary, Cody & Gary. From then on the head of the firm, although only in his early twenties, was building up a business which was netting him almost the salary then paid the President of the United States.



So indefatigably, irrepressibly energetic was Mr. Gary that the diligent building up of a successful legal career could not absorb all his vital powers. He was doing, in a sense, even bigger things in developing Wheaton, which, under his aggressive but unofficial leadership, had blossomed from a village into a town under a special charter. The townspeople nominated him as president of the Town Council, but, although his ticket won, his opponents had him barred out from serving because he was slightly under twenty-five years of age, the minimum specified in the law. Next year he won easily, and was twice re-elected before stepping aside to be succeeded as president by his father.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

NEW HEADLIGHT LENS

The McKee Glass Company are the manufacturers and the Aikenhead Hardware, Limited, Toronto, are the distributors of the McKee lens for use in automobile headlights. It is asserted the lens conforms with the new Ontario motor vehicle law which requires the

McKee Headlight Lens

beam of light to be thrown below a 42-inch dead line and a distance ahead. The lens embodies vertical and horizontal prisms, and the concave convex shape diverts the road beam below the 42-inch level. It is also claimed for it that it throws a side light of 100 feet, thus illuminating the roadside, enabling the driver to see around corners or car approaching. It is asserted the volume of light over plain window glass lens is inceased by 63 per cent. The beam from the lens is stated to be 600 feet in front of the car.

This lens has been adopted and is being used exclusively by some carriage manufacturers in Canada.

NICKEL-PLATED TOWEL BARS

The Newell Manufacturing Company, Limited, of Preston, Ont., is placing on the market a new style nickel-plated towel bar. The base is 1¾ in. diameter, while the bar is of 5-16 in. diameter. They are made in lengths of 12, 16, 18 and 20 inches. It is claimed for these bars that they are heavily plated with rust-proof solution before being nickel-plated. The fact that the goods are rust proof is asserted to be one of the distinctive features which works out for substantiability and serviceability. This concern also manufactures what they claim to be the only all-metal toilet paper holder made in Canada.

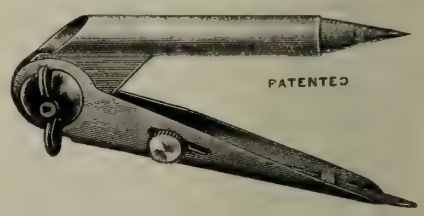
SYPHON CIRCULATING REFRIGERATOR

The Renfrew Refrigerator Company, Limited, of Renfrew, Ont., is placing on the market a refrigerator which they claim has distinctive advantages. It is claimed for this article that is has a perfect syphon and air circulating system, combined with eleven walls to protect ice and maintain low temperature. The refrigerator has vitreous porcelain linings. It is asserted there is no moisture present and that matches could be lighted on ice chamber walls. No. 3¼ size is made in ash, birch and oak, outside measurements being 39 in. width, depth 21½ ins., height 55½ ins., with ice capacity of 150 pounds.

NEW OIL GAUGE

Cummings Bros., Flint., Mich., are placing on the market a new CB oil gauge designed primarily for the Ford car. The manufacturers claim this article is the best insurance against burnt-out bearings. It indicates the oil level and removes danger and uncertainty caused by guessing. Stoppit is another of the new lines being placed on the market by this concern. This commodity is packed in metal containers, and labels being lithographed in three colors give it an attractive appearance. It is designed as a sure cure for leaky radiators. It is claimed for it that it never leaves

CB Oil Gauge



the trail of the leak until it is found and stopped.

CAST AND STEEL RANGES

The Hoosier Stove Company of Marion, Ind., are making a line of cast and steel ranges, soft and hard coal heaters. These ranges and heaters are being put out in smooth designs and finishes, and are of the latest pattern in these goods. The firm issues a catalogue, which will be mailed on request.

CARPENTER'S SCRIBER

J. Brais & Co., 1349 E. 90th St., Cleveland, O., are marketing a new article called the Improved Gem Scriber,

An Improved Gem Scriber

designed for carpenters' use. This article is asserted to be the handiest tool a carpenter has in his kit.

NEW TIRE PUMP

The Cassco tire engine-driven pump is being distributed in Canada by the Canadian Fairbanks-Morse Company, and is manufactured by the West Side Foundry Co., Troy, N.Y. It is designed to do away with the hand pumping of tires. It is claimed for this product that the air coming therefrom is dry and clean, as the new design of piston and cylinder prevents oil spray, thus preventing the detrimental effects of oil on tires. It is asserted by the manufacturers this pump will inflate a 34 x 4 tire to 80 pounds pressure in 1½ minutes, and that smaller tires take proportionately less time. The pump is sold complete with all fittings.

Cassco Pump for Ford Cars

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

FURTHER advances in linseed oil have been recorded during the week and $2.00 oil has now become a reality. The latest increase of 5c per gallon, following on a 23c jump last week, brings the price of raw to this figure.

Turpentine reveals a somewhat weaker tone and declines ranging from 2c to 7c per gallon have been made. The situation in the primary market shows little action though hopes of improvement in regard to shipment of supplies to Great Britain are held out.

At the instigation of the Federal Trade Commission in the United States, manufacturers are practically unanimous in signing a stipulation in which they agree not to use the term "Manila" in the brand-name or label on any of their rope containing less than 100 per cent. of pure Manila fibre, unless the matter contain qualifying words which conspicuously and clearly show the percentage of Manila hemp in the rope. Similar action may follow in Canada.

The order issued by the Dominion Government prohibiting export of scrap iron will not affect scrap merchants from all accounts. The only ones to suffer, it is said, will be manufacturers of shells and articles of iron and steel which produce scrap iron. In some quarters it is stated that Canadian buyers of scrap steel and iron pay far less than those of the States and the feeling exists that the steel men seem to have got behind the Government and forced its hands so as to corner all the scrap iron for themselves at a cheap price. One Canadian buyer takes exception to this statement that the price in the United States is more than that in Canada and feels that the action taken by the Government is simply to conserve supplies. The market holds firm, though Eastern reports indicate advances in many lines.

The hardware market generally remains firm, sheets, plates, pipe, boiler tubes showing no tendency to change. Advances have been made in cistern pumps, wrenches, cross cut saws, buck saws, hand saws, measuring tapes and sash weights. Business is reported in fair volume and in many lines shipments are going forward as rapidly as railways will accept the freight.

MONTREAL MARKETS

MONTREAL, March 14.—There are very few changes this week in staple or special lines and the trade is moving along very well. Supplies as reported are ample in a general way although it would seem that there is more trading between jobbers themselves than heretofore. This indicates the probability of some commodities being rather short and in the event of one being unable to secure his requirements in the regular way he will draw on the stocks of his fellow-jobber. There is a fair amount of business passing and this is more noticeable from country points than from the city trade. There is a great scarcity of certain kinds of wood handles, stated one jobber, and prices have been withdrawn on some lines. There have been a few revisions upward on some lines of auto accessories, tapes, bolt clippers, wire gates and fencing. The tin situation is unchanged with prices very firm and supplies light. Copper shipments are said to be cut off for the present from the States.

Prices For Wire Wheels And Tire Carriers Out

Montreal.

AUTOMOBILE WHEELS. — Prices for wire wheels are given herewith. White or colored wheels for use on Ford cars are listed at $87 and for the Chevrolet "490" white or colored the list is $110. Carriers for the Ford roadster cars are listed at $13.50 and for the sedan and touring cars the list is $15. In sets of five the wheels are subject to a trade discount of 20 and 5 per cent. and for smaller lots 20 per cent. The same discount applies to the carriers.

Babbitt Metal Advances; Also Kalsomine Brushes

Montreal.

BABBITT METAL, KALSO BRUSHES. —Advances were made this week in the price of kalsomine brushes. This applies to the line generally, the advance being approximately 5 per cent. Magnolia metal has also shown greater strength and this is quoted up 2c per pound to 29c. The latter advance is due to the increased costs of lead and other factors have added to this firming tendency.

Bolt Clippers Advance; Some Lines Tapes Up

Montreal.

BOLT CLIPPERS, TAPES, ETC.—Advances were made this week in bolt clippers and these are as follows: Number 0 is advanced from $3.30 each to $3.65; No. 1, $4.40 to $4.85; No. 2, $6.15 to $6.75 and No. 3, $7.90 to $8.65. Some advances have been made on different lines of tapes and others have been cancelled and will not be made hereafter.

Heavy Demand For Sap Supplies; Other Lines Sell

Montreal.

SAP SUPPLIES, WARES.—There has been an unusually heavy demand this season for sap buckets and other supplies needed in the sap bush. This has been met by the manufacturers and the retail dealers will undoubtedly be reaping a good trade from their farmer customers within the next few weeks. In speaking with one of the large manufacturers HARDWARE AND METAL was informed that the demand this season was unprecedented. Other lines such as pails and galvanized ware and the usual lines of tinware in demand during the early spring are selling very well.

Stoves Of All Kinds Expected To Sell Well

Montreal.

STOVES, ENAMELED WARE. — While the immediate business for stoves is not large, there are some going out to

dealers and trade is reported to be seasonably good. Prices are firmly maintained and bookings are now being taken for oil stoves that are so popular in the towns and cities during the hot weather. In view of the plate situation and the scarcity of iron there is a possibility that quotations may move upward ere long on steel and cast stoves. There is a good sale for enameled ware for delivery during the next few months.

Wire Nails Are Held Firmly; Unchanged

Montreal.

NAILS AND STEEL WIRE.—Jobbers report that they are now assembling and dispatching shipments that are billed to go out April 1. In view of the railway situation it is felt that such shipments should be sent forward as early as possible and this will be appreciated no doubt by the trade. Orders have been satisfactory so far this year and a good season is looked for in 1918. While there have been no revisions some think it possible that prices may be a little higher and others think they will hold without change. Wire nails are based at $5.25 per keg, cut nails at $5.60 and smooth steel wire base price is still $6.25 per 100 pounds.

Rope Sales Expected To Show Improvement

Montreal.

ROPE AND CORDAGE.—In view of the fact that the demand for rope has been confined to small sorting business, manufacturers and jobbers feel that there will probably be a better request for supplies as soon as weather permits resumption of outdoor work. In addition to this there will in all probability be an active demand from the shippng centres. Prices are held unchanged and these will continue to rule firmly. In view of the high prices for hemp it is stated that the Canadian prices, when compared with those across the border are even more favorable. On the present hemp basis quotations here, although high, are not as high as the manufacturer feels he is entitled to ask. It is stated that while there was a recent break of two cents in the prices of one U.S. concern that the same was temporary and that the old schedule has been resumed.

Sheet Plate Market Quiet And Unchanged

Montreal.

SHEETS AND PLATES. — Locally there has been no change in the sheet market and prices have held without revision of any kind being made. Trade is somewhat inactive and rather unsteady Dealers are supplying themselves with immediate needs from day to day and this sorting business is about all that is obtaining in the trade. It is expected that there will be very little change in the market for the immediate future inasmuch as there can be no improvement immediately in deliveries. Recent storms have but served to accentuate the difficulties of moving supplies forward and steel plate will have to await the clearance of transportation lines, as well as many other commodities.

BLACK SHEETS—		100 lbs.

Solder, Lead Sheets And Other Products Hold

Montreal.

LEAD PRODUCTS, SOLDER.—With a small amount of trading being done here, there is little change in the situation regarding lead products. These are held without change and trading is just of the regular routine nature. Of course the position on solder is very firm, tin being the controlling factor here. Lead has shown interesting developments for the week. Higher prices brought larger supplies to market but declines followed again in view of the larger supplies offering. Quotations here are as follows:

Lead pipe lb.	0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	
Lead wool, lb.		0 14

Zinc sheets, casks	0 26	0 30
Do., broken lots	0 28	0 32

New Discounts Named On Wire Fence And Gates

Montreal.

FENCING, GATES, ETC.—During the month of February a new list, effective March 10 and applying to all shipments made subsequent to this date, was issued by one manufacturer which reveals the following discounts in operation: Farm fences, heavy and medium heavy, 15 per cent.; poultry fence, 15 per cent.; stock gates, 20 per cent.; farm and ornamental gates, 25 per cent.; ornamental fence and flower bed guard, 25 per cent.; fence tools and sundries, 10 per cent.

Firm, Steady Market In Iron And Steel

Montreal.

IRON AND STEEL.—Locally there is no change in the iron and steel position and prices rule firmly with a possibility of their firming somewhat. From the country there is a very fair demand, while the local position regarding business is one of quietness. In a broad way there has been a satisfactory volume of business during the winter months, and this has been fully up to expectations.

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80

Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 20-0 21

Scrap Iron Of All Kinds Is Scarce And Higher

Montreal.

OLD MATERIALS.—There is very little movement of scrap metals these days and this is confined to small lots. The real interest of the week centres around all scrap iron products and the market is quite bare of large supplies. As a consequence prices have firmed and these are considerably better in several of the grades—the heavier ones being very firm. Light brass and yellow brass have been in a stronger position and each have moved up one cent per pound. Old rubbers, overshoes, tires and tea lead have held unchanged.

Tea lead	$ 0 05	$0 06½
Heavy lead pipe	0 06¼	0 06½
Yellow brass	0 13¼	0 14

Prices Hold For Oil And Gasoline

Montreal.

GASOLINE AND OILS.—There is the usual amount of demand for these products and prices are ruling at quotations shown in current quotations. Gasoline sales are still restricted due to the continued heavy roads and the consequent difficulty of getting outside the city with a car. This will soon be overcome and a heavy sale will develop for the product. Gasoline still held at 32½c per gallon. Coal oil sales are normal and the price of 17c still holds for Royalite and that for Palacine and Electroline is 20c per gallon.

Automobile Jacks Have New List And Discounts

Montreal.

AUTOMOBILE JACKS.—New prices and discounts are applied this week to various lines of foot lift automobile jacks. The Victor Jack No. 1 with an old list of $2.30 has been increased to $3.40; Badger foot lift jacks with a former list of $6.10 are advanced to $6.80. Two other lines are added: Badger No. 8 at $5.60 and also a truck jack No. 5 at $12.75. The usual discounts to all these lines are as follows: Lots of 24, 42½ per cent.; lots of 6, 37½ per cent. and in smaller lots 33 1/3 per cent. Prices are immediately effective as above revised.

New Prices Out On Shock Absorbers

Montreal.

SHOCK ABSORBERS.—The prices of shock absorbers are given as follows for the various types: Sets of four used on cars of 4,000 pounds and over are listed at $70 per set and these are known as the "heavy car type." The standard type for 3,000 pound cars and over list at $60. Intermediate type list is $47.50 and this is for cars of over 2,000 pounds, while the list for the junior type is $37.50. There is a special set for Ford cars and this lists at $28. The discount to the retail trade is 20 per cent. from these lists.

Tin May Yet Come In Under War Board Orders

Montreal.

INGOT METALS.—There is some relief in the statement that ingot tin may be permitted to come forward and that if this is done it probably will be passed through the War Trade Board to licensed jobbers for distribution. In this way there will be a closer check on supplies and it has been suggested that uncertainty in distribution previously was a contributing factor in the recent drastic order to shut off all imports. That is to say, there was some suggestion that the imports permitted to come forward previously had not been distributed in conformity with the requirements of the authorities and caused this serious decision to be made. As pointed out a week ago representations have been made by Ottawa and there is some hope of these meeting with a satisfactory response from the British government's board dealing with these exports. Other ingots are somewhat inactive.

COPPER.—The United States is reported to have temporarily shut off supplies owing to the fact that the Canadian importations are ample for the present needs of the country. This may have a tendency to firm prices. In the meantime these are unchanged at 33c-34c lb.

LEAD.—Little interest is manifested in lead this week and the product is stated to be rather scarce. Notwithstanding these prices are held at around 10½ to 11c per lb. Outside trading has been of a fluctuating nature and the prices rose and then declined at U.S. points.

TIN.—As pointed out above there is some hope that tin will still be allowed to come forward. Trading at present is necessarily confined owing to the extremely high price and the bare market. From 95c to $1 is quoted.

SPELTER.—An easier tone is reported in the spelter market and trading is light. Notwithstanding this, there has been no change in the price which rules around 10½c to 11c lb.

ANTIMONY.—It is suggested that should Japan enter the war there will be a firming of prices for antimony. In the meantime trading here is small at 19c per lb.

ALUMINUM.—The trading in aluminum is moderate this week. The setting of a price of 32c per lb. in 50 ton lots for virgin aluminum 99/100 pure by the United States Government is announced. No further information is available as to what small lots will sell at and trading has been limited.

TORONTO MARKETS

TORONTO, March 14. — Price changes have been numerous during the week and cover a wide variety of lines. Business has been very good, though some difficulty in getting the railways to accept freight has been evident. Solder, which has been active during the past two or three weeks, reveals a steadier tone and no price changes have been made over advances reported in last week's issue. Bar iron and steel hold steady with a fair demand reported. In some quarters, a shortage on band steel is reported in sizes ranging from one to two inches. Many lines of Lufkin's tapes have gone up in price and glaziers', log and board rules are also marked at higher levels. Glass boards have advanced and wooden tubs and pails are higher by 10 per cent. An advance in pumps has been made and new quotations are available on agricultural wrenches. axe and sledge handles, cross-cut, hand, buck and pruning saws, sash weights and other miscellaneous lines.

Cistern Pumps Go To Higher Levels

Toronto.

CISTERN PUMPS.—A change has been made in prices ruling on cistern pumps, the new quotations representing advances throughout. Stocks are in fair condition and the demand seasonable. Some improvement in movement with spring orders has been evident. Quotations prevailing to-day are as follows:

Fig. 1—No. 1, $2.30 each; No. 2, $2.55 each; No. 3, $2.85 each; No. 4, $3.40 each.
Fig. 2—No 1, $2.50 each; No. 2, $2.75 each; No. 3, $3.05 each; No. 4, $3.60.
Fig. 45—No. 1, $11.25 each; No. 2, $13 each. No. 348, $5.20 each. No. 349, $6.60 each.

Tapes And Rules Up; Glass Boards Too

Toronto.

TAPES, RULES, GLASS BOARDS.—An advance ranging from 5 to 10 per cent. on many lines of Lufkin tapes has been put into effect during the week. The Universal, 1020 series advances 5 per cent., Ass Skin, 7½ per cent. and the Sterling, metallic, tailors', pocket steel and marvel steel all go up 10 per cent. Glass boards, glaziers', board and log rules are all higher at the following net prices:

Glass boards—24 x 36 in., $11.85 each; 30 x 48 in., $14.55 each; 36 x 54 in., $17.25 each; 42 x 60 in., $20.45 each; 48 x 72 in., $25.85 each.
Glaziers' rules—No. 7136, $7.85 doz.; No. 7137, $9.90 doz.; No. 7138, $14.85 dozen.
Hickory log rules—No. 14, $21.90.
Hickory board rules—No. 3, $18.65; No. 6, $21.90; No. 8, $20.25; No. 10, $24.35.

Tire Holders And Folding Chairs Advance

Toronto.

TIRE HOLDERS, FOLDING CHAIRS.—The steady advance in steel and the shortage of supplies is influencing prices on many of the manufactured lines to higher levels. A change during the week on tire holders and folding chairs reveals an advance in price of over ten per cent. on these lines, quotations now being made on the following basis:

Tire holders—No. 70, 1 tire, $3.50 list; No. 75, 2 tire, $4 list; No. 180, 1 tire, $6 list; No. 185, 2 tire, $6.50 list.
Folding chairs—No. 106, $3.44 list; No. 56, $2.88 list.
Hanging seat—No. 300, $3.30 list; No. 90, $2.22 list.
Third seat—No. 45, $1.32; No. 46, $1.32.
All above subject to a discount of 25%; in lots of six, 30%; in lots of 24, 35%.

Sash Weights Higher; Cement Steady

Toronto.

SASH WEIGHTS, CEMENT.—Advances put into effect during the week on sash weights show a new range of prices. The sectional are now quoted at from $4.50 to $4.85 per 100 pounds, and the solid from $3.00 to $3.25 per 100 pounds.

Cement remains unchanged in a steady market with the demand light. Plaster of Paris is now being quoted at $3.25 per barrel, any quantity.

Glue Records Advance; New Line Sprinklers

Toronto.

GLUE, SPRINKLERS.—Smaller sizes of Le Page's glue have undergone revision and prices being quoted to-day are at higher levels than formerly ruling. Quotations on the 1-ounce are $19.20 per gross; 2-ounce, $27.00 per gross; ½-gill, $2.25 per dozen.

A new line of lawn sprinklers has been put on the market called the "B" sprinkler. It is claimed this can be set to spray at nearly any angle. These retail at $2.75 each, the dealer's price showing 25 per cent. discount from this figure.

Higher Prices on Axe And Hammer Handles

Toronto.

AXE, HAMMER HANDLES, WRENCHES.—Several lines of handles have undergone revision and best grades in axe and hammer handles have registered new high levels. In axes, the 3X best hickory are quoted as high as $4.40 dozen, and 4X $4.70 per dozen, while boys' axe handles are quoted at $2.60. Second growth hickory sledge hammer handles, 30 and 32-inch, reveal prices of $2.50 per dozen, and 34 and 36-inch are being quoted at $2.75 per dozen.

Bench drills manufactured by the Millers Falls Co. have registered an advance of about 5 per cent.

A new discount has been put into effect on agricultural wrenches of 42½

per cent. The list prices are as follows: 6 in., $10.00; 8-in., $12.00; 10-in., $14.00; 12-in., $18.00; 15-in., $24.00 dozen.

Advances In Many Lines Of Saws

Toronto.

SAWS.—Revisions in saws show advances in practically the entire range of S. & D. lines, including cross-cut, buck, hand, pruning and compass. A few of the more familiar lines with prices are shown herewith; other lines have advanced proportionately.

Cross-cut two-man Racer—5½ ft., $5.85 each; Maple Leaf, 5½ ft., $5.85 each; 6 in., $6.60 each; Narrow Racer, 5½ ft., $5.85 each.

Buck saws—Prince Rupert, $12.85 doz.; Maple Leaf, $10.50 dozen; Happy Medium, $10.50 doz.

Hand saws—No. 4½, 20 in., $17.60 dozen; 22 in., $19.25 dozen; 24 in., $21.45 dozen; 26 in., $23.65 dozen.

Pruning saws—No. 17, 18 in., $8 dozen.

Compass saws—No. 19, 12 in., $5.50 dozen; 14 in., $5.75; 16 in., $6 dozen.

Change in Collar Pads; Sad Irons

Toronto.

COLLAR PADS, SAD IRONS.—New prices issued on Ventiplex collar pads reveal an upward trend and quotations now being made are given herewith.

	Gross	Dozen
9 in. Gray	$66.00	$5.75
10 in. Gray	69.00	6.00
11 in. Gray	72.00	6.25
12 in. Gray	75.00	6.50
9 in. Yellow or blue	72.00	6.25
10 in. Yellow or blue	75.00	6.50
11 in. Yellow or blue	78.00	6.75
12 in. Yellow or blue	81.00	7.00

Nos. 60 and 70 sets of Dover sad irons are being quoted at $18.95 and $27.00 per dozen.

Crescent Wrenches Record Big Jump

Toronto.

CRESCENT WRENCHES.—Comparative prices on the Crescent single end adjustable wrenches reveal a big advance in this line during the week. The new quotations are considerably in advance of those prevailing formerly. Both old and new lists are reproduced:

New list—4 in., $1.55; 6 in., $1.55; 8 in., $1.90; 10 in., $2.40; 12 in., $3.

Old list—4 in., $1; 6 in., $1; 8 in., $1.25; 10 in., $1.60; 12 in., $2.

The discount remains unchanged at 25 per cent.; in lots of twelve, 30 per cent.; in lots of forty-eight, 35 per cent.

A slight advance is reported in auto tool rolls, in some lines of funnels for filling cars, oilers, oil and gasoline kits. Flat auto covers, 100 x 144-inch, are now listed at $14.50, and the 150 x 216 inch at $33.00, which represents an upward tendency with discounts unchanged at 25 per cent.; in lots of six, 30 per cent.; in lots of twenty-four, 35 per cent. Some lines of magnetos and switches, formerly quoted at 25 per cent., are now quoted at 20 per cent.

Advance Shot Guns About 10 Per Cent.

Toronto.

SHOTGUNS.—Double-barrel shotguns, Stevens, show a change in price during the week, an advance of about 10 per cent. being recorded. Single-barrel remained unchanged. Quotations now being named on the Stevens double-barrel guns are as follows:

No. 235—12 ga., $21.75 each.
No. 335—12 ga., $26 each.

Wire Nails Hold Unchanged In Market

Toronto.

NAILS, WIRE.—The situation in respect to wire nails shows no change over conditions prevailing last week. The market is very firm and a very fair demand exists. The present base of $5.20 per 100 pounds is being maintained. Cut nails hold steady at a base of $5.65 per 100 pounds, and no immediate change is anticipated.

Smooth steel wire is firm and quotations are being made at the $6.25 basis per 100 pounds. Fence wire shows a slightly narrower range than has been ruling formerly, and prevailing prices are as follows:

No. 9 plain galvanized, $5.35-$5.90 100 lbs.
No. 12 plain galvanized, $5.50-$6 100 lbs.
No. 13 plain galvanized, $6-$6.15 100 lbs.
No. 9 coil spring, $5.50-$5.90 100 lbs.
No. 12 coil spring, $5.80-$6.20 100 lbs.

Oils And Gasoline Remain Unchanged

Toronto.

OILS, GASOLINE.—Some slight relief in the matter of supplies of oils and gasoline is reported, and the market is being upheld very firmly. Palacine coal oil is said to be very scarce, but requirements in other grades are being met. Royalite coal oil is being quoted at 17c per gallon and Palacine at 20c. Gasoline shows no change at 31½c per gallon. The demand in coal oil is heavy and calls for gasoline are expected to become more numerous, as milder weather prevails. Quotations on lubricating oil will be found in current market quotations.

Business Held Up On Stoves And Ranges

Toronto.

STOVES, ENAMELWARE.—Considerable difficulty is being experienced in getting shipments of stoves and ranges away owing to the tie-up on the railways. Orders are reported in very good volume, but getting them away to the customer is not so easy. Shortages are reported in some lines, and in some quarters it is felt that a greatly curtailed output will result this year in respect to stoves. The present prices, though high, will not result in lessened inquiry, and more orders than there will be stoves are expected. Sales of enamelware continue good, and spring orders will continue to go out when transportation facilities permit. No changes in the prices on either stoves, ranges, heaters, or enamelware or tinware are reported for the week, a very firm undertone being noticeable in all lines.

Shortage Of Band Steel Reported

Toronto.

IRON AND STEEL.—A shortage of band steel has become apparent during the week, 1, 1¼, 1½ and 2-inch all being reported on the shy list. In some quarters ample stocks are reported as available. The situation generally in respect to iron and steel, whereas it shows no remarkable improvement, is really easier as regards supplies. The demand is maintained at a very fair level, and prices show no disposition to change from the figures given herewith:

TORONTO—	Per 100 lbs.	
Common bar iron	....	$ 5 25
Common bar steel	....	5 50
Refined iron	....	5 65
Angle base	....	5 75
Horseshoe iron	....	6 50
Tire steel	....	5 70
Mild steel	....	5 50
Norway iron	11 00	13 00
Toe caulk steel	....	6 25
Sleigh shoe steel	....	5 50
Band steel, No. 10	....	5 75
Do., No. 12	....	6 00
Spring steel	9 50	11 50
Mining drill steel	19 00	30 00
Sheet cast steel	0 42	0 45
Tool steel	0 20	0 42

Steel Sheets Still In Difficult Position

Toronto.

SHEETS, PLATES.—Relief seemed to be rapidly developing in respect to shipments of sheets, but further difficulties have arisen which are holding up deliveries, and in some quarters stocks are reported badly depleted, and orders are being booked for delivery on arrival of cars now in transit. From many sources the information is given out that stocks of both galvanized and black sheets are in very good condition. A shortage of 10¾ oz. galvanized sheets has developed. Generally speaking, however, supplies equal the demand, which is seasonable. Prices show no further revisions, being firmly maintained at basis given herewith:

BLACK SHEETS—	Per 100 lbs.	
10 gauge	$10 00	$12 00
12 gauge	7 55	10 10
14 gauge	7 45	8 40
16 gauge	7 30	8 50
18-20 gauge	7 30	8 05

14	8 10	8 35 9 35

Steady Situation Revealed In Corrugated Sheets

Toronto.

CORRUGATED SHEETS, EAVETROUGH.—A steady tone prevails in respect to corrugated sheets during the week, and no excitement of any kind has marked the situation on this line. Stocks are in very fair condition, and with the opening of spring greater activity in shipments is anticipated. Eavetrough and conductor pipe also hold steady, and the spring demand is beginning to assume more definite proportions. Prices as given in current quotations show no change. Corrugated sheets are quoted as follows:

TORONTO	Per 100 Sq. Feet	
	Galvanized	Painted
No. 28 gauge	$ 8 25-$ 8 75	$6 75-$7 25
No. 26 gauge	9 00- 9 50	7 75- 8 25
No. 24 gauge	13 00-	10 50
No. 22 gauge	16 00-	13 25
No. 20 gauge	19 00-	16 50
No. 18 gauge	23 00-	20 00

Discount 7½%.

Boiler Tubes Expected May 1; Wrought Pipe

Toronto.

WROUGHT PIPE, BOILER TUBES.—If present expectations are realized big shipments of boiler tubes are expected about May 1, and their coming will relieve a situation which has been rather full of uncertainty for some time past. No change in the price is anticipated, and quotations recorded below are likely to be maintained.

Wrought iron pipe reveals a very firm tendency and stocks are in very good condition. Nothing new has developed and prices hold steady, as shown in the current market quotations.

Boiler Tubes—	Cold Drawn	Lapweld
1 inch	$36 00	$ ....
1¼ inch	40 00	....
1½ inch	43 00	36 00
1¾ inch	43 00	36 00
2 inch	50 00	36 00
2¼ inch	53 00	38 50
2½ inch	55 00	42 00
3 inch	64 00	50 00
3¼ inch	....	58 00
3½ inch	77 00	60 00
4 inch	90 00	75 00

Lead Market Reveals Firm Tendency

Toronto.

LEAD AND ZINC PRODUCTS.—After two or three weeks of excitement in the lead and tin markets, which resulted in shoving prices of solder to very high levels, steadiness is again apparent, and quotations are holding firmly in all products at figures shown last week. The lowest prices shown on solder in the table below are quantity prices, and only quoted on shipments of one-half ton or more. In usual quantities prices would be 2c per pound higher than the low quotations given. The primary market on lead remains steady, with little change, and prices on lead pipe, trap and bends, and zinc sheets are all maintained firmly.

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	
Lead wool, lb.		0 16
Lead sheets, 3 to 3½ lbs. sq ft., lb.		0 13¼

Solder, wiping, lb.	0 38¾	0 43¼
Solder, wire, lb.	0 48½	0 56½
Zinc sheets, per lb.	0 26	....

Gov't. Order Prohibits Export Of Scrap Iron

Toronto.

OLD MATERIALS.—During the week the Dominion Government has issued an order prohibiting the export of scrap iron from Canada. Commenting on the order, one scrap iron merchant said: "It simply means a great monetary loss to those manufacturers of iron products who have scrap iron as a by-product, while the steel combine will not sell shell steel any cheaper to the manufacturers." He stated that Canadian buyers of scrap steel and iron paid far less than those of the States, one paying $24 a ton and the other in the States about $40. Exception has been taken to this statement by one Canadian buyer, who asserts that prices in the United States are less than those now ruling in Canada. His views are given elsewhere in this issue.

He declared further that the steel men seemed to have got behind the Government, forcing their hand so as to corner all the scrap iron for themselves at a cheap price. He stated that scrap merchants would not suffer, but only the manufacturers of shells and articles of iron and steel which produced scrap iron. Shipments of waste paper are not affected, although some shipments of scrap bagging have been held up at the border.

Use Term "Manila" Only On Pure Manila

Toronto.

TWINE, CORDAGE.—An investigation has been conducted by the Federal Trade Commission of the United States into complaints received that misleading labels and brands were being used on rope, and that advertisements, catalogues, circular letters, etc., were being circulated that offered rope as Manila rope which was not pure Manila rope. This has resulted in a stipulation being signed under which manufacturers agree not to use the term Manila in the brand name or label on any of their rope containing less than 100 per cent. of pure Manila fibre unless the printed, typewritten or written matter referring to the rope shall contain qualifying words which conspicuously and clearly show the percentage of Manila hemp in the rope. This reform should be welcomed by the trade generally, and it is more than likely similar conditions will obtain in Canada.

Considerable relief is felt over the settlement of binder twine prices. Cordage remains unchanged at prices appearing in current market quotations.

Woodenware Advances Ten Per Cent.

Toronto.

WOODENWARE.—As predicted in HARDWARE AND METAL, prices on woodenware show an advance, new prices being 10 per cent. higher than those formerly ruling. The statement from the manufacturer reads that wooden tubs and pails advance 10 per cent. on list before discount is taken. The new prices are shown in current market quotations.

Waste And Oakum In Firm Market

Toronto.

WASTE, OAKUM.—A firm situation is revealed in the market on waste, and manufacturers indicate that their plants are operating at full capacity. The commercial demand is by no means heavy, but with the opening of spring some improvement is expected along this line.

Oakum shows no great activity, and prices appear in current market quotations on both of the above lines.

Ready Roofings Higher In United States

Toronto.

ROOFING MATERIALS. — Advice from the United States indicates that higher prices have become effective in some lines of ready roofings. No change is reported locally, and it is not expected an immediate advance will be made here. Building papers are holding steady at prices given in current quotations.

Good Demand For Belting Exists

Toronto.

BELTING, TAP SOLES.—The demand for belting is reported splendid and shipments are going forward as rapidly as the railways will accept the freight. A firm situation in respect to prices exists and no change is anticipated. Tap soles and lifts are holding steady, and the demand is very fair.

Ingot Metals Reveal Steadier Tendency

Toronto.

INGOT METALS.—The situation in non-ferrous metals has become more interesting by reason of the uncertainty surrounding developments in the market, more particularly in regard to tin and aluminum. The revision of copper prices will come up for consideration some time in May, and it is understood that the producers will induce the United States Government to agree to a higher price after June 1. There is no improvement in the position of tin, the scarcity still being acute, with practically no supplies obtainable. Although the price of aluminum has been fixed in the States, there has been no change locally, a condition brought about by the scarcity of metal in this market. Lead is slightly easier, though no change in price is recorded. Spelter and antimony are both unchanged.

COPPER.—There is no new development in the copper situation and the market continues very quiet. At the present time there is somewhat of a shortage in the United States, due to a heavy and sudden demand by the Government, who cut off supplies from outside consumers for the time being. However, no fear is expressed that there will be an ultimate shortage of the red metal. It is reported that a movement is on foot among the producers to induce the United States Government to agree to a higher price after June 1. Quotations range from 30c to 32c per pound locally.

TIN.—There is no change in the position of tin, which is very scarce. The entire situation seems to be growing more serious each day, and inquiries and

demand for the metal far exceed supply. The demand extends for deliveries far into the future. There is no Straits tin offering and only limited quantities of Banca and Chinese. In this market there is practically no spot tin to be had, and price ranges from 95c to $1 per pound.

SPELTER.—The market has a weaker tendency on account of the light demand, which is resulting in a decline in production. The price of spelter in London remains officially fixed at £54 for prompts and £50 for futures, which are equal to 11.45c and 10.60c per pound. The local price is unchanged at 9¾c to 10½c.

LEAD.—Although the undertone of the lead market is strong, increased production is beginning to develop and an easier position is reported. Lead is now quoted locally at from 9¼c to 10c per pound.

ANTIMONY.—There is no change in the antimony market, which is attracting little attention. Present price, 16c to 18c per pound.

ALUMINUM.—Although the price of aluminum has been fixed at 32c per lb. in the primary market, there has been no change made here, due principally to the fact that very little metal can be obtained except for Government work. The market here is firm, with price at 60c per pound.

PIG IRON.—Little change is reported during the week. Receipts of coke are gradually improving, and furnaces are enabled to maintain operations. With improved conditions generally a heavier iron production is expected to develop. Foundry iron is quoted at $49.50 per ton.

LONDON MARKETS

LONDON, March 14.—Business here continues fair. Just now it is between seasons but good business is expected later, on garden tools, house cleaning supplies, prepared paints, etc. The sale for builders' hardware will be small as there is very little new building in sight. Prices continue very firm and advances may be expected on many lines.

Tire Chain Prices Firmly Maintained

London.

TIRE CHAINS.—Prices on automobile tire chains have been firmly maintained with discount unchanged at 25 per cent. on the Rid-o-Skid line. List prices prevailing are shown herewith:

30 in. x 3½ in., $2.65 per pair; 32 x 3½, $2.80 per pair; 34 x 3½, $2.95 per pair; 31 x 4, $2.90 per pair; 32 x 4, $3 per pair; 33 x 4, $3.10 per pair; 34 x 4, $3.20 per pair; 35 x 4, $3.30 per pair; 36 x 4, $3.40 per pair; 35 x 4½, $3.50 per pair; 36 x 4½, $3.60 per pair; 37 x 4½, $3.75 per pair.

Spark Plugs In Fair Demand

London.

SPARK PLUGS.—Greater interest in automobile accessories is becoming manifest and inquiries are being submitted for the many things used by the motorist. Spark plugs are in very good demand and shipments are going forward in fair quantities. Prices are firmly maintained for the Champion spark plugs on the following basis:

Champion X for Ford—In lots of 100, 52c each; less than 100, 54c each.

Champion O for Overland—In lots of 100, 59c each; less than 100, 61c each.

Champion Buick conical for McLaughlin and Chevrolet—In lots of 100, 59c each; less than 100, 61c each.

Champion Regular ⅞", for Maxwell and Gray-Dort—In lots of 100, 59c each; less than 100, 61c each.

Champion conical ½" for Studebaker—in lots of 100, 59c each; less than 100, 61c each.

No Change In Headlight Lenses

London.

HEADLIGHT LENSES.—Prices on headlight lenses now prevailing reveal no change over recent quotations. The demand is fair and is expected to improve when milder weather and better roads are available so the motorist can get out into the country. Quotations now being made on the Corning Conaphores are given herewith. These are for models 1916-17 cars mentioned:

8 in. Novial, size for Chevrolet, $5 per pair list; 8¼ in. Novial, size for Ford and Chalmers, $5 per pair list; 8½ in. Novial, size for McLaughlin and Gray-Dort, $5 per pair list; 8¾ in. Novial, size for Maxwell, Overland and Hup, $6.25 per pair list; 9 in. Novial, size for Studebaker, $6.25 per pair list; 9⅜ in. Novial, size for Paige, $6.25 per pair list. For models 1916-1917, less 25%.

Prices on the plain or clear headlight lenses are also given:

8 in. clear, $3.60 per pair list; 8¼ in., $3.60 per pair list; 8½ in. clear, $3.60 per pair list; 8¾ in. clear, $4.25 per pair list; 9 in. clear, $4.25 per pair list; 9⅜ in. clear, $4.25 per pair list. Less 25%.

Calf Meal Goes To Higher Levels

London.

CALF MEAL.—Further advances in calf meal have been made during the week. The demand at the present time is excellent and goods are moving out very freely. Chicken feed is also in demand and excellent sales are reported on sheep dip and disinfectant. These lines enjoy a good demand at the present season of the year and retailers are taking active interest in the various lines:

Royal Purple Calf Meal—100-lb. sacks, $4.55 per 100 lbs.; 50-lb. sacks, $4.65 per 100 lbs.; 25-lb. sacks, $4.75 per 100 lbs.

Royal Purple chick feed—100-lb. bags, $5.50 per 100 lbs.

Zenoleum sheep dip and disinfectant—8-oz. tins, $2.40 doz.; quarts, $5 doz.; ½ gallons, $8.40 doz.; 1 gallons, $15 doz.

Zenoleum lice powder, $2.40 dozen.

Cistern Pumps Advance In Price

London.

CISTERN PUMPS.—New prices have been issued on cistern pumps which provide for a substantial increase. The price of raw materials and labor have entered largely into the cause of this latest change. The demand is seasonable, which is only fair, though some shipments are being made with spring orders. Net prices figured at the new discount of 35 per cent. off list are given herewith:

No. 1 open spout, $2.18 each; No. 2 open spout, $2.44 each; No. 3 open spout, $2.67 each; No. 1 closed spout, $2.31 each; No. 2 closed spout, $2.57; No. 3 closed spout, $2.86 each.

Sap Pails In Demand; Snow Shovels Up

London.

SAP PAILS, SNOW SHOVELS.—A good demand has been evident on sap pails and spouts and shipments have gone forward freely. The government campaign for increased production of syrup would seem to be bearing fruit. Prices are unchanged as follows:

Sap pails, straight or flaring, $19.50 per 100; sap spouts, Eureka, $12 per 1,000.

An advance in one of the cheaper grades of snow shovels of 50c per dozen, is reported and the arctic is now being quoted at $4.50 per dozen.

Gauge Glasses Go To Higher Levels

London.

GAUGE GLASSES.—New prices have just been issued on gauge glasses which reveal the fact that this line has followed the tendency noticeable in nearly all other lines, that of an advance. The present quotations are being made on the folowing basis:

½ x 10 in., 45c per doz.; 12 in., 50c per doz.; 9-16 x 12 in., 60c doz.; 14 in., 65c doz.; ⅝ x 10 in., 60c doz.; 12 in., 70c doz.; 14 in., 75c doz.; 16 in., 85c doz.; ¾ x 12 in., 75c doz.; 14 in., 95c doz.; 16 in., $1.10 doz.; 18 in., $1.20 doz.

Nails Are Now Moving Freely

London.

NAILS.—Sales of nails are assuming good proportions and a very free movement is now indicated. American roofing nails in kegs are selling at $8.00 and in 25 pound boxes at $8.25 per 100 lbs. No change in either wire or cut is revealed in the quotations of $5.20 and $5.60 respectively per 100 pounds base.

Solder Is Higher; Cordage Unchanged

London.

SOLDER, CORDAGE.—The continued strength in the primary markets on tin and lead have resulted in further advances being put into effect on solder. Strictly half and half has now reached the high level of 52c per pound and sales are reported fair.

Prices on rope are being firmly held and no change over present quotations is expected. Interest is manifest over the action being taken in the United States by manufacturers at the instigation of the Federal Trade Commission to have only one brand of Manila rope and that 100 per cent. pure, any deviation from this to be noted plainly.

Pure Manila, 39c base per lb.; British Manila, 33c base per lb.; New Zealand hemp, 33c base per lb.; sisal, 27½c base per lb.

Spades And Shovels Firm; Also Harvest Tools

London.

SPADES, SHOVELS, HARVEST TOOLS.—An increased interest is expected to develop in spades and shovels and harvest tools during the next few weeks. Although construction work is not expected to be as heavy as usual, a good demand for shovels will develop. Some shipments applying on booked orders have been made but the movement is by no means free as yet. Present prices on these lines remain at former levels as follows:

Spades and shovels 1sts, 30 per cent.; 2nds 20/2½ per cent.; 4ths, 5 per cent.

Net prices figured at above discounts are: 1sts, Jones, $14.30 doz., Bull Dog, $14.30 doz.; 2nds, Burns, $13.87 doz.; 4ths, Olds, $12.40 doz.; Fox, $12.40 doz.; Black Cat, $11.93 doz. Harvest tools 25 per cent.

Poultry Wire, Screen Wire, Lawn Mowers, Steady

London.

POULTRY WIRE, SCREEN WIRE, LAWN MOWERS.—With the approach of milder weather greater interest is being taken in these lines and retailers show a disposition to book, where delivery is not wanted just now. Some shipments are going forward and prices are steady as follows:

Poultry netting, Canadian, 1 in. and 2 in. mesh, 15 per cent.

Screen wire, painted black, 100 ft. rolls $3 per 100 sq. ft.; bronze, 14c sq. ft.

Lawn mowers, Dairy, Star, Woodyatt, Empress, 40 per cent.

Bamboo poles which have attained very high levels remain unchanged during the weeks as follows: 12 ft., 90c doz.; 14 ft., $1.10 doz.; 16 ft., $1.40 doz.; 18 ft., $1.75 doz.

Net Prices On Window Glass

London.

WINDOW GLASS.—The situation following last week's advance in window glass shows no change. Prices are holding firm at quotations shown herewith and new net prices figured at the new discount are reproduced herewith:

	Single	D.D.
Under 25 in.	$12.60	$17.18
26 to 34 in.	13.20	18.64
35 to 40 in.	13.76	19.80
41 to 50 in.	17.63	22.50
51 to 60 in.	18.45	23.10
61 to 70 in.	19.87	24.52
71 to 80 in.	....	26.55
81 to 84 in.	....	34.09
85 to 90 in.	....	36.64
91 to 94 in.	....	37.35
95 to 100 in.	....	43.91

Putty Firm; White Lead In Oil Unchanged

London.

PUTTY, WHITE LEAD.—A very firm situation is revealed in putty though no change in prices has been made. The demand is seasonable which is rather light. Small quantities of white lead in oil are moving and no revision in quotations is apparent:

Putty, standard, 25, 50, 100 lb. drums, $5.15 per 100 lbs.; pure, 25, 50, 100 lb. drums, $6.90 per 100.

White lead in oil, per 100 lbs.: Pure, tons, $15.70; less than tons, $16.05; pure Elephant, tons, $16.20; less than tons, $16.55.

Linseed Oil Advances; Turpentine Declines

London.

LINSEED OIL, TURPENTINE. — Conditions in the linseed oil market show no improvement during the week. Crushers indicate that supplies of flax are not reaching them promptly and the further advance of seed has resulted in prices on oil advancing another 5c per gallon to make $2 oil a reality. Quotations now being made on oil are as follows:

Per gal.: 1 to 2 barrels, raw, $2; boiled, $2.03.

Turpentine shows weakness locally and declines of 2c per gallon have been made in prevailing quotations. These are as follows:

Per Imp. Gal.: 1 barrel lots, 70c; 2 to 4 barrel lots, 69c; 5 gal. lots, 80c.

WINNIPEG MARKETS

WINNIPEG, March 14.—Business for the past week has been very brisk, due no doubt to the mild spell, and prospects of an early spring. Booking for fall business also shows up well.

Price changes for the week are again rather numerous, and all on the upward trend, with but two exceptions, these being tap soles and No. 90 nail hammers. Among the advanced lines appear auger bits, short eye augers, buck saw frames, shoe polish, awl-for-awls, hand saws, fibre ware, tennis racquets, waders, duck decoys, and Worsell grain scoops.

Tap Soles Decline 20 Per Cent.

Winnipeg.

TAP SOLES.—This week's changes show a noted decline in the price of tap soles, new price lists received from manufacturers being approximately 20 per cent. lower than former prices, and new prices now effective are given herewith:

Tap soles—No. 37½, $2.35; No. 122, $4.40; No. 123, $4.20; No. 126, $3.30 dozen pairs.
Tap lifts—No. 50 $1.55 dozen pairs.

Buck Saw Frames Reveal Upward Trend

Winnipeg.

BUCK SAW FRAMES.—New prices have just been named by the manufacturers on buck saw frames, showing advances of from 10 to 15 per cent. and are quoted to-day as follows:

	—Dozen—		
	Prince Rupert	Happy Medium	Maple Leaf
Complete frames	$6.25	$4.20	$5.40
Long ends	2.10	1.30	1.60
Short ends	2.00	1.20	1.55
Cross bars	2.15	1.70	2.25

Auger Bits Up 20 Per Cent.; Augers Too

Winnipeg.

AUGER BITS, AUGERS.—Due to increased manufacturing cost prices have again advanced on Gilmour auger bits. These show an increase of approximately 20 per cent. over former quotations, being quoted to-day at 50 per cent. off list. Net prices are as follows:

3-16 in., $3.00; 4-16 in., $2.50; 5-16 in., $2.50; 6-16 in., $2.50; 7-16 in., $2.50; 8-16 in., $2.50; 9-16 in., $3.00; 10-16 in., $3.00; 11-16 in., $3.50; 12-16 in., $3.50; 13-16 in., $4.10; 14-16 in., $4.10; 15-16 in., $4.75; 16-16 in., $4.75; 20-16 in., $7.00 doz.

Following the advance in auger bits new prices have also been named on Gilmour short eye augers. To-day's quotations are based on 35 per cent. off lists. Net prices are given below:

¾-in., $9.00; 1-in., $9.75; 1¼-in., $11.85; 1½-in., $14.80; 1¾-in., $17.40; 2-in., $19.50; 2½-in., $31.20; 3-in., $57. 20 doz.

Awl-for-Awls Higher; Thread And Needles Up

Winnipeg.

AWL - FOR - AWLS, THREAD, NEEDLES.—A further revision has been found necessary on awl-for-awl speedy stitchers, which move up about 7½ per cent. New prices now effective are as follows:

Awl-for-awls; $6.40 dozen.
Extra reels, $1.90 dozen.
Waxed thread in 25-yd. reels or 25-yd. skeins, $1.90 dozen.
Extra needles, 95c dozen.

Fibre Ware in Further Price Revisions

Winnipeg.

FIBRE WARE.—New prices were given in last week's issue of HARDWARE AND METAL on fibre ware. Since then manufacturers have found a slight revision necessary on some sizes. The change, however, is very slight. New prices now in effect are as follows:

Tubs—No. 3, $12.70; No. 2, $14.90; No. 1, $18; No. 0, $20.95 dozen.
Pails—Star, $4.60 dozen.
Twin Beaver washboards, $4.90 dozen.

More Saws Up; Shoe Polish Higher

Winnipeg.

SAWS, SHOE POLISH.—Following last week's advance on crosscut saws, etc., new prices have also been made on Columbia hand and panel saws. Prices ruling to-day are herewith given:

Hand, 26 in., $15.60 doz.; panel, 20 in., $12.60 doz.; 22 in., $13.80 doz.

New price lists just to hand show an increase in the price of 2-in-1 shoe polish, new resale prices which have been established by the manufacturers being $1.20 doz.

(Continued on page 46.)

WEEKLY PAINT DEPARTMENT

Weather Destroys as Sure as Fire

It Becomes a Matter of Insurance to Paint Buildings — Business Men Would Not Think of Letting the Matter of Fire Insurance Slip by Without Being Attended To

"FIRE, after all, only comes by mere chance or accident. But if property owners feel the necessity of being protected against accident or mere chance, how much greater is the necessity of protecting these same buildings against just as sure but a little slower disintegrating influence than fire?" said an expert paint man in replying to a question from HARDWARE AND METAL as to why he deemed it essential for painting to be done at the present time.

Slower But Certain Destruction

The same question has been put to a number of paint men. One and all are in accord as to the basic reason why painting should be carried out each year. He is a poor business man indeed who lets his property run the risk without sufficient fire insurance to recoup him in case it is wiped out. The destruction caused through the wearing elements of time is just as sure but no less certain than the blotting out by fire. The only difference lies in the fact that fire wipes out in a few minutes whereas the elements may take a little longer to accomplish their ends. But a building exposed to wind and weather is deteriorating and the loss is certain because it is being carried on continuously.

Only One Kind of Insurance

"The effects of the elements are not stopped through war, high prices of labor or scarcity of labor, but these forces continue to operate day and night, summer and winter. And the only kind of insurance which the property owner can take out against it is protecting coats of paint," asserted one of the paint experts recently interviewed.

These are powerful factors which the paint salesman should drive home in talking with prospective customers. Many there are who do not realize the seriousness of allowing their buildings to go for a year or two without the much-needed coat or coats of paint. As pointed out last week by an expert paint salesman, the cost of building materials is far higher now than it has ever been. It would cost a great deal more to replace those same buildings. Property is more valuable now because it would cost more to rebuild if from any cause it were blotted out.

Springtime is usually considered the most favorable time for painting. But this is really an erroneous idea. Buildings that require painting in the fall should be painted then for the simple reason that the damage to an unprotected surface during the winter time is immeasurably greater than at any other time during the year. But if the building needs to be painted in the springtime it should not be allowed to scorch under the summer's sun until the fall comes round. In fact, the time to paint is when the building needs it. To allow it to run past that time is like setting fire to it by degrees and allowing it to consume slowly.

True Economy Is Conservation

The truest kind of economy is to conserve that which we have. To allow valuable buildings to go unprotected and to withhold the spending of a little money which would provide them with a proper measure of paint protection is in reality the poorest kind of economy. It is, in fact, absolute waste.

In this age of keen competition, when resources must be conserved in order to permit of the strongest fight possible, it is the poorest kind of fighting efficiency to allow buildings to get into such disrepair through lack of paint covering. A family that takes pride in keeping their house in a state of repair and in having it look its best at all times will be better able to take their part in the struggle for supremacy. It is the same principle that permeates the soldier's life when he is made to keep his attire looking spick and span as a part of his discipline. He is a better fighting unit because his clothing is neat and well-kept. So also with a business man. He is a better fighting unit—keener for trade—if he keeps his surroundings looking at their best. In this way painting also becomes a matter of real economy.

There is a chance for the paint salesman to drive home these arguments with respect to insurance of buildings and the real economy that results therefrom. It is time to start to sow the seed in this respect. Some preliminary talk can be done along these lines. When the fine spring days come around it will be an easier matter to get the painting business under way.

When you tell him—
"The Bristles can't come out"

There's more than a guarantee of Boeckh Brush Quality in that statement, "the bristles can't come out." It's the most powerful sales reason any brush could have. When Mr. Average Man is selecting a paint brush and you hand him a "Boeckh Steel-Grip Rubber Set" and say "the bristles can't come out," you've made a sale. For you're able to tell him about *Steel-Grip* and *Rubber Set,* the two reasons why.

There isn't another brush that gives you the positive sales action of "Steel-Grip Rubber Set" with the bristles that won't come out.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 14.—The real interest of the week centres around the strong position of linseed oil again, and this gives rise to many probable changes that may have to be made. Oil has been sold as high as $1.95 in single barrel lots and even at this it is very, very scarce. The paint men are just wondering whether there can be any possibility of improvement in the situation soon. In speaking with one firm HARDWARE AND METAL was told that there "is little likelihood of there being much improvement in the position on oil for at least six weeks and probably longer." If seed is shipped into the United States from the Winnipeg market in large quantities it gives rise to various opinions as to the effect on the Canadian prices. Thus, if there be a heavy lot of seed left for shipment down the lakes when navigation opens, one paint maker states that "there may be quite a decline in the price of oil." Others state that there is not more than the required amount of seed available in Canada if none be shipped out. In as far as the manfacturer is concerned he has provided for his requirements for some time ahead and this enables him to proceed with his manufacturing. The mills and factories are very busy and are sending forward the requirements of their customers even more promptly than in previous years. There is every indication that the trade will open early this year. Turpentine has taken a drop and has sold as low as 65 cents per gallon for barrel lots and 63 cents is the lowest quotation for 5 barrel lots. The firm tendencies are likely to cause a revision of prices also for white lead in oil and as well for putty. The latter commodity is very firm, and another contributing factor to this firmness is the strong position of whiting markets.

Linseed Oil Holds Interest At High Price

Montreal.

LINSEED OIL.—The seed market has been soaring and record prices have been reached. This is reflected again in the firm position of oil and while there are really no quotations being made a few barrels have sold as high as $1.95 for raw and $1.97½ for boiled. It is worth noting that the situation in United States markets is almost identical with the conditions here and prices here compare very closely with the quotations made by the jobbers in Montreal and other points. As regards present delivery of oil, there is really nothing doing. In a few instances odd barrel lots have been supplied, but there is little available for distribution. Prices are expected to remain high and $2 is predicted in some quarters as a probable limit. Not a jobber has suggested that there is any probability of a decline in oil for some weeks, and in one interview HARDWARE AND METAL was informed that the situation was likely to remain firm for six weeks to two months. Whether the prices will remain high after the opening of navigation will depend upon another factor. Granted that a great deal of seed were available for shipment via the Great Lakes as soon as the season opened this same source suggested that there was every likelihood of their being a more favorable revision of prices. However, with the amount of seed that is going south into the States just now there may be a dearth of needed supplies for the Canadian trade and if this be the case the prices will stay up. Bookings for future delivery are being taken on the basis of $1.85 for raw and $1.87½ for boiled.

Linseed Oil—	Raw, Imp. gal.	Boiled, Imp. gal.
Single barrels only	$1.95	$1.97½
5 to 9 barrels	....	....
10 to 25 barrels	....	....

For immediate delivery only.

Five-Cent Decline Recorded In Turpentine

Montreal.

TURPENTINE. — While there is a weaker market the reason for a decline of five cents per gallon is accounted for through the condition of trade more than from any other cause. This reflects the situation in the south where there has been a declining market and the very slow trade is there assigned as the price-disturbing factor. Even at the decline of 5c per gallon sales have not been stimulated much and until the spring months there will not likely be a very great demand. Supplies here are reported to be ample for the needs of the Canadian trade at present.

Turpentine—	Per Imp. gallon
5 bbls. and over	$0.65-$0.69
1 barrel lots	0.63- 0.67

Putty Prices Likely To Be Higher

Montreal.

PUTTY.—In view of the linseed oil situation there is some likelihood of a revision upward of putty prices. This is the biggest factor in such a probable change and in addition to this the firm position on whiting and its being hard to get will be added factors in making a change likely. In some quarters it has been stated that new prices may be arranged within the next few days and the indication as above outlined obtains in paint circles generally. For the present there is not a great deal of business, but what there is holds in a firm position at the following prices:

Standard Putty—	Per 100 lbs. 5 ton	1 ton	Less
Bulk, in barrels	$3.75	$3.90	$4.10
Do., ½ barrels	3.90	4.05	4.25
Do., 100 lb.	4.60	4.75	4.95
Do., 25 lb.	4.60	4.75	4.95
Do., 12½ lb.	4.85	5.00	5.20
3 and 5 lb. tins	6.60	6.75	6.95
1 and 2 lb. tins	7.10	7.25	7.45

Pure linseed oil putty—$1.75 per 100 lb. advance on above prices.

Glaziers' putty—$1.35 per 100 lb. advance on above prices.

Strong Position On Paint Revealed

Montreal.

MIXED PAINTS, ETC.—In view of the very serious advance that has been registered in the price of oil and in consideration of the strength of the lead market, paint makers are considering very seriously the length of time that they will be able to continue selling mixed paints on the present basis. As a matter of fact it is frankly admitted that another advance may be necessary very soon. A further advance of 25c per gallon has been made in the United States. Spring orders in the hands of the various firms are being shipped forward with much facility these days and all the makers seem to have provided themselves with ample supplies of raw materials to cover their present manufacturing requirements. Business is said to be good and the retail trade is expected to be in a position to take care of the good business that promises for 1918.

Very Firm Condition In White Lead In Oil

Montreal.

WHITE LEAD IN OIL.—That there has been no upward revision of prices for white lead in oil is not due to any weakness. As a matter of fact the position is decidedly firm and in view of the strength of lead and particularly as a result of such high prices for linseed oil it is stated that an advance would be justified. However, no immediate change is expected owing to heavy stocks which seem to be in very light demand. However, there is a feeling in some quarters that higher prices must rule and these may be arranged in the very near future. Trading in the meantime is just fair. Five-ton lots of standard are selling on the basis of $15 per 100 lbs.; ton lots at $15.50 and small lots at $15.85 per hundredweight.

(Continued on page 48.)

Ramsay's Helps as Business Getters

Attractive colored easels as shown above will be found extremely helpful. They can be arranged on counters or used for window displays. The value of a window as a business getter should never be overlooked.

Ask for easels when sending in orders.

MAKERS OF PAINTS AND VARNISHES SINCE 1842

TORONTO MONTREAL VANCOUVER

If interested, tear out this page and keep with letters to be answered.

TORONTO

TORONTO, March 14.—Expectations held out in respect to improved conditions developing in the linseed oil situation have been disappointing and a real scarcity is reported from practically all sources. Receipts of flax are very light, and, although some shipments are reported, these are by no means capable of effecting great improvement. Weakness in the primary markets, reported last week, has resulted in declines being registered during the week locally. Stocks are in fair condition, but great difficulty is experienced in getting shipment through from the South. A very free movement in mixed paint is apparent, and the market has a very firm undertone.

Linseed Oil Reaches $2.00 Mark

Toronto.

LINSEED OIL.—Two dollar linseed oil has become a reality, as a further advance of 5c has been recorded during the week to bring prices in some quarters up to $2 per gallon for raw. Shipments of flax are very, very light, and the situation has reached a very acute stage. An advance of 12¾c per bushel in the cash price of flax on the Winnipeg exchange is shown for the week, from Wednesday to Wednesday. Higher quotations were made in the week than the $3.96¼ price ruling on Wednesday, and futures have gone to over $4 per bushel. Altogether the situation reveals extreme firmness, and declines are not looked for. Prices on linseed oil show a wide range during the week, and at the low price of $1.87 being quoted no spot stocks are available. However, orders are being accepted on this basis for delivery in about two weeks' time. Quotations at the present time are being confined to the one and two-barrel basis.

	Raw. Imp. Gal.	Boiled. Imp. Gal.
1 to 2 bbls.	$1.87-$2.00	$1.89½-$2.03
3 to 5 bbls.	.....	.....
6 to 9 bbls.	.....	.....

Less than barrel lots 10c per gallon higher than single barrel price.

Decline Registered In Turpentine

Toronto.

TURPENTINE.—In last week's issue of HARDWARE AND METAL the weakness apparent in the primary market on turpentine was outlined, and this is now reflected locally in a decline which ranges from 2c to 7c per gallon. Developments during the week in the primary market indicate that Great Britain is going to inaugurate a new system of purchasing naval stores, which it is thought may bring with it a movement more in keeping with the legitimate demands of the business interests involved. British trade interests demand consideration and need raw supplies available from the United States. There is evidence that in as large a degree as possible her industries will be sustained and hopes are entertained for a greater sent shipments are awaiting cars, and Canada is about the only one for whom shipments are being accepted. Even here receipts have not been heavy, though stock is reported rolling. Rosin is in light supply, but the demand is being taken care of satisfactorily. Prices on turpentine now show the following range, with little movement apparent:

	Imp. Gal.
1 barrel	$0.65½-$0.70
2 to 4 barrels	0.64 - 0.69
5 gallon lots	0.70½- 0.80

No Improvement Apparent In White Lead In Oil

Toronto.

WHITE LEAD IN OIL.—No improvement is shown in the demand for white lead in oil, and a dull tone is evident in the market. No indications of any change are given out, and prices are expected to hold firm at their present levels. Stocks are heavy and really more than adequate to cover requirements, as indicated by the light demand. Prices appearing in current quotations show no change.

Splendid Demand For Mixed Paints

Toronto.

MIXED PAINTS.—Spring orders are moving out freely, and from the volume of business coming in it is thought that retailers who had been holding back on account of prices are now convinced that no lower quotations will be available. This realization of the firm tone to the paint market is very likely developing action on the part of retailers, and they are covering for their requirements now. A very firm undertone to the ready-mixed paint market is apparent, and some point to further increase as possible. Some difficulty is being experienced in getting shipments away owing to freight congestion, but it is hoped this condition will not prevail for long.

Glass Firmly Held; Putty Unchanged

Toronto.

GLASS, PUTTY.—Prices on window glass have been firmly maintained during the week at the new list and discount established last week. The discount now prevailing for full boxes is 25 per cent. and 10 per cent. for cut lights. No great activity is revealed in this commodity just now, the demand being limited. Stocks are in fair condition. Plate glass remains unchanged in a firm market.

Putty is holding firm, and no change has been made in prices on standard, which are based in casks at $4.30 per 100 pounds in less than ton lots. Pure putty takes an advance of $1.75 per 100 pounds. Other prices appear in current market quotations.

Brushes In Very Firm Market

Toronto.

BRUSHES.—Whereas stocks of brushes of all kinds are in fair condition, the difficulty in securing French and Russian white bristles is increasing, and some styles of brushes made from these have movement of naval stores. At the pre- been eliminated for the present. Orders for all bristles have to be placed months in advance, and very heavy stocks maintained to be reasonably sure of supplies for manufacturing purposes. Rumors of a probable advance within the next week or two are insistent, and this will range from 10 to 25 per cent. Business is excellent and spring orders are moving as freely as transportation facilities will permit.

WEEKLY MARKET REPORT

(Continued from page 41.)

Grain Scoops Go To Higher Levels

Winnipeg.

GRAIN SCOOPS.—Due to higher cost of production new prices have just been issued on Worsell grain scoops, which show about a 10 per cent. advance. To-day's prices are as follows:

Japanned, $15.50 doz.; galvanized, $17 dozen.

The regular lines of scoops show no change in price, holding firm at figures below :

Crescent scoops—No. 4, $15.80 doz.; No. 6, $16.80 dozen; No. 8, $17.80 dozen; No. 10, $18.80 dozen.

Moose and Jones scoops—No. 4, $16.90 dozen. No. 6, $17.80 dozen; No. 8, $18.70 dozen; No. 10, $19.60 dozen.

Many Lines Of Sporting Goods Advance

Winnipeg.

SPORTING GOODS.—New prices have just gone into effect on several lines of sporting goods, including tennis racquets, waders, duck decoys and rifles. The two former lines are imported from England and show heavy advances over last year.

Prices ruling to-day are as follows:

Tennis racquets—Doherty, $11 each; Varsity, $5.50 each; Eclipse, $4.45 each.

Twill waders, $9 pair.

Stocking length waders, $5.50 pair.

Duck decoys—No. 1, $9; No. 2, $8.50; No. 3, $7; No. 4, $11 dozen.

Remington rifles—No. 12A, $20; No. 12C, $22.50.

Remington repeating shotguns—No. 10A, $42.25 each.

Nail Hammers Register Decline

Winnipeg.

NAIL HAMMERS.—Advice just received from manufacturers of No. 90 nail hammers show a substantial reduction in price amounting to about 25 per cent. Winnipeg jobbers have therefore been able to reduce the price from $7.55 dozen to $5.50 dozen.

Linseed Oil Higher; Turps Unchanged

Winnipeg.

LINSEED OIL, TURPENTINE.—Prices on flax seed continue to soar, Winnipeg market on Saturday touching $3.93 bushel. As predicted in last week's issue of HARDWARE AND METAL, higher prices were expected on linseed oil and during the week it advanced 16c per gallon. During the past month linseed oil has shown a total advance of 25c per gallon. Prices ruling to-day are as follows: Raw linseed oil, $2.00 gal.; boiled linseed oil, $2.03 gal.

No change is reported on turpentine and prices hold firm as formerly quoted, namely: Barrels, 80c gal.; ½ barrels, 83c gal.; 5-gal. cans, 85c gal.; 1-gal. cans, 85c gal.; plus the usual extras for containers.

Business Problems During the War and After

JUDGE ELBERT H. GARY, clerk in a general store, student of law, and head of the United States Steel Corporation, warns business men:

"It is probable that the Russian Revolution and its consequences were planned in Germany, and have been financed and directed by German money and brains. Germany is now endeavoring to 'Russianize' several other countries."

LABOR IS IMPORTANT

Above is one of Judge Gary's warnings. Another refers to labor-power for production of food and munitions of war. Another calls business men to organize for efficiency. The whole article is head and shoulders above average 'war-business' articles because Judge Gary is head and shoulders above even his peers in big business.

IN THE FINANCIAL POST

You can get the business value out of this powerful article to-day, for it appears in THE FINANCIAL POST for this week. Some one you know subscribes for THE FINANCIAL POST. Think of the most efficient friend you have. 'Phone him and borrow his copy.

OTHER CONTENTS TO NOTE

Besides Judge Gary's article in this week's FINANCIAL POST, look for these headings. There's worth-while business news for you in every one of these items:

Outlook for Trade in Russia after War.

Sir Robert Borden and Luxury Imports.

Ontario Guarantees Loans to Farmers.

The Future of the Grand Trunk and C.P.R.

The "Muddling Along" Policy with the War.

The Making of a Mail Order King.

Canadian Car Co. Had Big Profits.

Larger Profits for Dominion Canners.

These articles and many others on current business affairs appear in THE FINANCIAL POST of date March 9th. To read THE FINANCIAL POST this week and every week is to place yourself head and shoulders higher in business information than the rank and file whose news comes to them haphazard. THE FINANCIAL POST has a staff of expert editors with representatives in important centres. The Editors of the strong group of THE MACLEAN BUSINESS NEWSPAPERS add their intensified practical knowledge of the different business fields each week to the news columns of THE FINANCIAL POST.

Get Your Share of this New Business

From fifteen to twenty million dollars is usually spent every year in refinishing motor cars. No one likes a shabby car, but many will be neglected this year from economical reasons unless owners adopt the *"Berry way,"* which makes the cost nominal.

Berry Brothers'
Auto Color Varnishes

enable the unskilled varnisher to refinish his car in his own garage and produce a handsome, durable finish in any color combination for the mere cost of the material.

We furnish an attractive cut-out for counter display, and folders telling how much varnish it takes for a car, how easily an amateur can use it, and showing in colors how cars look when refinished. A selling help of real value.

Ready to Ship Assortments

We have already put up, well selected assortments of colors that we can ship promptly. Order one to-day and get in the field early. You will sell it quickly and want more. Write for further particulars anyway.

The Jamieson Company's First Move

These are the big objects back of **JAMIESON'S** first move. In our business, as well as in yours, there must be "conversation," but business must go on. We must adjust ourselves to the new conditions and produce products that will meet them.

Here is our reply to the Country's needs.

To help you reduce your paint investment.
To help you meet war-time conditions.
To help you maintain your paint business on a profitable basis in spite of conditions.
To help you overcome high prices and encourage painting.

Get in the big spring drive for business.

Write us about the agency in your town.

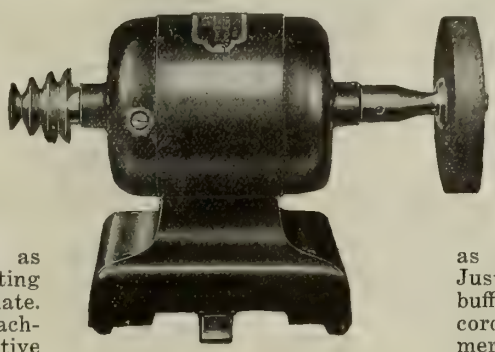
NORTHERN ELECTRIC
"DUMORE" UTILITY MOTORS



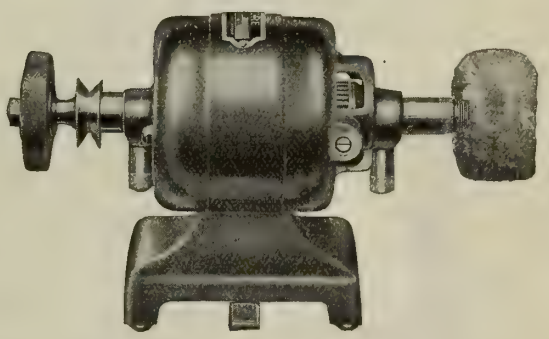
—are a boon to housewives, and go a long way towards helping solve the servant problem by furnishing sufficient power to do light chores. "DUMORE" Utility Motors are small in size but capable of long, hard service in driving many domestic appliances, or with attachments for polishing silverware, cleaning cutlery, sharpening knives, etc.

TYPE "A" 1/25 H.P.

Built to meet the demand for a light, compact power unit. Finished in black enamel. Equipped with 3 ft. of cord and attachment plug, wheel arbor and emery wheel. Wheel arbor nickel plated. Speed 2000 to 9000 R.P.M.

TYPE "B" 1/25 H. P.

The Type B Motor is the same as the Type A illustrated above, excepting that it is finished in all nickel plate. Equipped with 3 ft. of cord and attachment plug. Makes a very attractive looking motor for any use.



TYPE "C" 1/16 H. P.

Light and powerful. Always ready for use, and is as near trouble proof as it is possible to make a motor. Equipped regularly with 3-step pulley on one end of the motor shaft and a wheel arbor on the other, together with emery wheel. The Type "C" can be equipped the same as the Type "D" motor if so ordered. Just the motor for light polishing and buffing work. Equipped with 8 ft. of cord and attachment plug, Cutler-Hammer 3-speed Rheostat. Speeds 2000-6000-8000 R.P.M.

Practical—Efficient—Economical

For Jewelers, Dentists, Hotels and Restaurants the "DUMORE" Utility Motor will be found indispensable in a great many ways. Furnished in three sizes—"A"—1/25 H.P.; "C"—1/16 H.P., and "D"—⅛ H. P. For the benefit of the trade we have undertaken to advertise these famous "DUMORE" small motors to the public through the Daily Papers from coast to coast, and it will be to your distinct advantage to carry this line in stock for demonstration when called upon to do so.

For full particulars, prices and attractive literature, write our nearest house.

TYPE "D" 1/8 H. P.

The Type "D" Motor is one of the most popular of stock sizes. Is especially adapted for jewelers' and dentists' work. Equipped with 8 ft. cord and attachment plug. Cutler-Hammer 3-speed Rheostat in the base. Shaft ends are tapered. Ritter chuck and wheel arbors can be used in this motor. Speeds 2000-6000-8000 R.P.M.

EMPIRE WATER SUPPLY SYSTEMS

You can make big profit and satisfied customers by furnishing your trade with an Empire Water Supply System, which at very moderate cost keeps water on tap, under pressure, in kitchen, bathroom, barn or wherever desired.

Many years of service have proven the value of Empire Water Supply System, and the convenience resulting from an ample supply of running water—under pressure—should be the first consideration of those who desire a home that is modern.

Empire Water Systems can be supplied with Hand Pump, Gasoline Engine or Electric Pump. We carry in stock all lines of plumbing material. Write for our Catalogue on Rural Plumbing.

Paint a Defense
Against Deterioration

There is a greater loss to property through lack of paint than loss by fire. Canada's fire loss in 1917 was over $23,000,000.00.

There are now, more than ever, greater opportunities for the sale and use of

Maple Leaf Paints

because they meet every need, for the adequate protection and preservation of property.

Housecleaning Time should suggest Wa-Ko-Ver

Housecleaning always reveals floors to be stained, woodwork that needs retouching, furniture that should be brightened up—in fact, a hundred and one places where Wa-Ko-Ver could be used with telling effect.

If you keep Wa-Ko-Ver well to the fore just now in your windows, on your counters and in your advertising, the housewife's mind will become receptive to the Wa-Ko-Ver idea. The discovery of worn floors, scratched woodwork, etc., during housecleaning will at once suggest Wa-Ko-Ver—and your store.

Make use of housecleaning time to bring greater sales of Wa-Ko-Ver, the guaranteed stain, that beautifies all woodwork, and wears so wonderfully.

The truest indication of the success of any business policy is increased sales.

TAKING our sales of Electrical and Automobile Supplies as a criterion we have indisputable evidence that our policy of giving exceptional service meets with the approval of dealers everywhere.

To many our service—painstakingly exact, prompt and sure—has proven a revelation. To all it has been a means of making more sales, and of giving, in turn, an improved service to the consumer.

You, too, can benefit by this highly developed service by simply sending us your order.

PRESCOTT W. ROBINSON, Canadian Representative, 414 Drummond Building, Montreal

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

THE BUYERS' GUIDE

If what you want is not here, write us, and we will tell you where to get it. Let us suggest that you consult also the advertisers' index facing the inside back cover, after having secured advertisers' names from this directory. The information you may desire may be found in the advertising pages. This department is maintained for the benefit and convenience of our readers. The insertion of advertisers' headings is gladly undertaken, but does not become part of any advertising contract.

John Wanamaker's Dominance

JOHN WANAMAKER surpassed the merchants of the days of his beginning because he had an idea that they didn't have: namely, to multiply sales and customers. John Wanamaker has possessed this identical idea ever since, and it has made him the prince of merchants.

Smaller men among manufacturers and retailers lack this idea: they devote more thought and effort to buying right and running their business trimly. But they are not master merchants.

Now great success cannot come to any firm or any man apart from the Wanamaker idea—which is to multiply sales and customers. Given this idea, and pursue it ardently always, and fortunes and dominance are secured.

The winning and holding of customers and the enlargement of sales call for the employment of advertising. The printed solicitation gets to buyers that flesh-and-blood salesmen cannot get to, and gets to them at right times, and wears down resistance. Printed solicitations produce friendliness, and accelerate the traveller's sales efforts when he calls. Printed solicitations lower the cost of selling. The flesh-and-blood man cannot call on men for much less than $2 a call. The printed solicitation can make calls for as low as a cent a call.

A cent a call! For this very small sum a seller can have access to a very complete list of buyers—the best of them as well as the most of them. A seller can get to this fine company of buyers no matter where they may be—in large cities, in crossroad villages, in off-the-main-line towns. He can get to foreign prospects—in Newfoundland, British West Indies, in South America. A seller can have access to a class of men who have formed the habit of reading advertisements as a necessary part of their day's work; and reading in particular the advertisements which are carried in their specialized business newspaper which they subscribe to, paying cash in advance therefor, and which they rely on for complete news relating to their business, including the news of advertisers—their proposals or statements about their goods.

All this for a cent a call!

Are you a director or official, with a voice in the selling policies of your house? And are you discouraging the use of advertising when advertising proposals come up for consideration? Think of John Wanamaker, Timothy Eaton, Marshall Field, Gordon Selfridge, Sears-Roebuck, Butler Bros., and a score of other firms making a great success. Think of the firms in Canada who have built up tremendous demand for their trade-marked, standardized and advertised product. And analyze the reasons for their great success. You will perhaps then have a new view concerning the function and value of advertising as a sales force or agent.

Then consider the cheapness of advertising to the retailer. You will get help from the table following:

	Cost per page (minimum)	Cost per year for page space	Cost per call
Dry Goods Review	$35	$420	1 2-5 cents
Men's Wear Review	30	360	2 cents
Canadian Grocer	24	1,248	5-11 cents
Hardware and Metal	24	1,248	8-11 cents
Bookseller and Stationer	25	300	1 2-3 cents
Sanitary Engineer	16.70	400	1 3-4 cents

PRINTED solicitation at such low cost ought assuredly to be incorporated into the selling plans of every wholesale or manufacturing firm relying on retailers to distribute their products or merchandise. Will you discuss the matter with us?

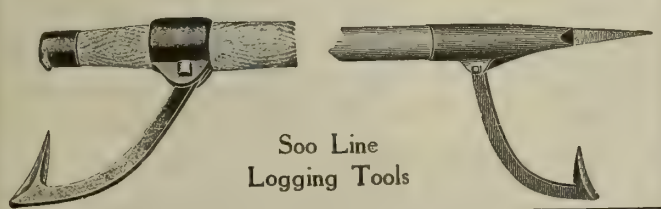
SAGER AXES
always make Satisfied Customers



because of their sterling quality and excellent design. Our "Sager" special chemical process of tempering gives Sager axes their individuality.

Soo Line Logging Tools

Lumbermen prefer Soo Line Logging Tools because of the careful attention given to the design and their dependability when subject to hard usage.

We desire to impress upon the Merchants the necessity of placing orders NOW for Peavies, Pike Poles, etc., for Spring trade, as otherwise they may be disappointed in being unable to obtain deliveries.

White Enamel
one of the
DOUGALL QUALITY LINE

Nothing is more beautiful than White Enamel—of the right kind.

The illustration above shows what a charming effect can be obtained with the use of DOUGALL'S WHITE ENAMEL.

It stays white—will not crack—can be washed—in fact is practically indestructible. Made in pure white and can be tinted to any color desired.

Write for Particulars.

Becoming a Bigger Man

WHAT is the difference between some men you know and others known to you? Why are some men earning $3,000 a year and some $30,000? You can't put it down to heredity or better early opportunities, or even better education. What, then, is the explanation of the stagnation of some men and the elevation and progress of others?

We are reminded of a story. A railroad man, born in Canada, was revisiting his home town on the St. Lawrence River. He wandered up to a group of old-timers who sat in the sun basking in blissful idleness. "Charlie," said one of the old men, "they tell me you are getting $20,000 a year." "Something like that," said Charlie. "Well, all I've got to say, Charlie, is that you're not worth it."

A salary of $20,000 a year to these do-nothing men was incredible. Not one of the group had ever made as much as $2,000 a year, and each man in the company felt that he was a mighty good man.

Charlie had left the old home town when he was a lad. He had got into the mill of bigger things. He developed to be a good man, a better man, the best man for certain work. His specialized education, joined to his own energy and labor sent him up, up, up. To put it in another way: Charlie had always more to sell, and the world wanted his merchandise—brain, skill and ability. Having more to sell all the time, he got more pay all the time.

Charlie could have stayed in the old home town; could have stagnated like others; could have been content with common wages. In short, Charlie could have stayed with the common crowd at the foot of the ladder. But Charlie improved himself and pushed himself, and this type of man the Goddess of Fortune likes to take by the hand and lead onward and upward.

Almost any man can climb higher if he really wants to try. None but himself will hold him back. As a matter of fact, the world applauds and helps those who try to climb the ladder that reaches towards the stars.

The bank manager in an obscure branch in a village can get out of that bank surely and swiftly, if he makes it clear to his superiors that he is ready for larger service and a larger sphere. The humble retailer can burst the walls of his small store, just as Timothy Eaton did, if he gets the right idea and follows it. It is not a matter of brain or education so much as of purpose joined to energy and labor. The salesman or manager or bookkeeper or secretary can lift himself to a higher plane of service and rewards if he prepares himself diligently for larger work and pay. The small manufacturer, the company director, the broker—all can become enlarged in the nature of their enterprise and in the amount of their income,—by resolutely setting themselves about the task of growing to be bigger-minded men.

Specialized information is the great idea. This is what the world pays handsomely for. And to acquire specialized information is really a simple matter, calling for the purposeful and faithful use of time. This chiefly.

One does not have to stop his ordinary work, or go to a university, or to any school. One can acquire the specialized information in the margin of time which is his own—in the after-hours of business. Which means: If a man will read the right kind of books or publications, and make himself a serious student at home, in his hours—the evening hours or the early morning hours—he can climb to heights of position and pay that will dazzle the inert comrades of his youth or day's work.

IF business—BUSINESS—is your chosen field of work, we counsel you to read each week THE FINANCIAL POST. It will stimulate you mentally. It will challenge you to further studious effort. It will give you glimpses into the world of endeavor occupied by the captains of industry and finance. With the guidance of the POST, and with its wealth of specialized information, you, a purposeful man, aiming to go higher in life and pay, will find yourself becoming enlarged in knowledge and ambition, and will be acquiring the bases and facts of knowledge which become the rungs of the ladder you climb by.

It is the first step which costs. But this cost is trivial—a single dollar. We offer you the POST for four months for a dollar. Surely it is worth a dollar to discover how right we are in our argument. If you have the will to go higher in position and pay, sign the coupon below.

THE MACLEAN PUBLISHING COMPANY, LIMITED,
143-153 University Avenue, Toronto.

Send me / us THE FINANCIAL POST for four months for one dollar.

Money to be enclosed / remitted.

Advertising makes for a better product—

Not only does advertising create a good impression regarding the product advertised but it **makes for a better product.** There are added responsibility and written-printed claims to substantiate.

Ads That Pull

THE retailers who are securing best results from their newspaper advertising are those who are using illustrations in their advertisements. Just as a mail order catalog would be dead without illustrations, so is the average consumer advertisement when illustrations are omitted.

Canadian retail hardware merchants can secure attractive illustrations through HARDWARE AND METAL'S Electro Service. Mounted electros are supplied at a cost of 20c each. Booklet showing 365 electros will be supplied on request. Address below.

Sell Handles that are Most in Demand

STILL'S

There are more of STILL'S HANDLES sold in Canada than any other make. What's the logical conclusion of this fact?—*they are the best.*

There's a Still Handle to meet every need: Axe, Pick, Sledge and Hammer Handles; Cant Hook and Peavie Handles.

There's nothing like selling the best of everything. Good profits in our handles, too.

4 Good Reasons --- READ 'EM!

Why you should sell Rolled Thread Bolts and Screws:

BETTER QUALITY—Rolled Thread Bolts can only be made from first quality Basic Open-Hearth Stock.

STRONGER—Actual tests show 13 per cent. greater strength than Cut Thread Bolts.

NO USELESS WEIGHT—Shanks are smaller than threads. No useless weight to pay freight on.

BIG FIRMS ADOPTING THEM—Some of the largest users on the continent will accept nothing else and they always investigate before acting.

Made in Canada

Conservation of Food

DOMESTIC ECONOMY is impossible without FRUIT JARS.

This is fully recognised by all Authorities interested in FOOD CONSERVATION and their PUBLICITY CAMPAIGN will undoubtedly stimulate the use of JARS this year and create a demand far above normal. RETAILERS should be ready to do their part by having JARS on hand when required.

REQUIREMENTS should be carefully considered and orders placed with WHOLESALERS as early as possible.

LATE ORDERS may not ensure delivery in time to meet the requirements of the PUBLIC.

NO FRUIT or vegetables should be wasted this year for want of JARS.

Ask your Wholesaler for JARS "MADE IN CANADA" and guaranteed by a reliable manufacturer.

Adv. of Dominion Glass Company, Limited

Made in Canada

Wanted

SITUATIONS VACANT

WANTED—TINSMITH FOR COUNTRY SHOP —must be competent, reliable, exempt from military service. Good salary paid to right man. Apply Drawer A, Rocanville, Sask.

GOOD LIVE EXPERIENCED RETAIL HARDware salesman for one of best stores in Toronto. Give all details in first letter. Apply Box 370, Hardware and Metal.

WANTED—AN EXCEPTIONAL OPPORTUNity for an intelligent and aggressive salesman, to represent a very reputable paint and varnish house in Ontario. Must be sober and industrious. Applications treated confidentially. Box 367, Hardware and Metal.

WANTED — FIRST-CLASS HARDWARE clerk and window dresser. Must be well posted and capable. Good position to the right man. Apply to The Bond Hardware Co., Guelph.

WANTED—YOUNG MEN FOR WHOLESALE and retail hardware firm. Also man experienced in wholesale and retail automobile accessories. Apply Oliver Vokes, 40 Queen St. East, Toronto.

THOROUGH HARDWARE MAN OR LADY capable of taking charge of all office work. Reply, stating full particulars, Box 380, Hardware and Metal.

WANTED

WANTED — A SECOND-HAND 5-GALLON Bowser outside gasoline tank. Quote cheapest price. J. A. Loeppky, Wymark, Sask.

ADVERTISER DESIRES TO RENT OR PURchase hardware store in Western Ontario, with or without stock. Give all particulars to Box 379, care Hardware and Metal, Montreal.

EXPERIENCED TRAVELLERS WITH GOOD connections, calling on the hardware trade, wanted for every province of the Dominion to sell an up-to-date line of builders' and cabinet hardware on liberal commission. Splendid opportunity for A1 men. Apply Box 384, Hardware and Metal.

MISCELLANEOUS

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314 Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

FOR SALE

FOR SALE — INSIDE BOWSER GASOLINE pump with five-barrel tank; used since fall of nineteen sixteen; am replacing by street pump. A snap for cash. H. Stevens, Ochre River, Man.

HARDWARE STOCK AND BUSINESS FOR sale in live town of 800. First-class farmers' trade. Hydro just coming in. Apply Box 360, Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN large Eastern Ontario city; stock about $8,000.00. Price right for quick sale. Box 361, Hardware and Metal.

FOR SALE, AT A LIBERAL DISCOUNT—2 National cash registers, cost $210.00 cash; 1 Taylor safe, cost $150.00; 1 oval glass counter show case, cost $30.00; 1 set of tinners' tools, cost $250.00. J. H. Millard, Melfort, Sask.

FOR SALE—BUILDING AND HARDWARE stock in good live Saskatchewan village. Stock on hand about $6,000. Living rooms above. Good opportunity and terms for right man. Box 726, Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN good Western Ontario city; stock five thousand; paying business; act quick. Box 365, Hardware and Metal.

HARDWARE AND TINSMITHING BUSINESS in a Western Ontario town of 800, with good farming connections. Stock, fixtures and tools, $12,000; can be reduced. Box 372, Hardware and Metal.

HARDWARE BUSINESS FOR SALE—IN A Northern Ontario town of 8,000 population. Stock of shelf and heavy hardware, in excellent condition. Stock can be reduced to about $15,000.00. Will sell or lease premises. Owner has been in business over twenty-five years and wants to retire. Box 730, Hardware and Metal, Toronto, Ont.

TO BE SOLD BY LOTS ONLY—FIRST:— Buggy shafts at 30, 20% off list; buggy and waggon spokes, 35, 20% off list; buggy rims, 25, 20% off list; hubs, assorted, 30, 20% off list. Second:—Cut nails, assorted, $5.00 base. Third:—Sherwin-Williams prepared paints in ¼, ½ and 1 gallon at $3.00. Stock given on application. Courchesne & Chaput, Joliette, P.Q.

WELL ESTABLISHED RETAIL BUSINESS and buildings for sale—in Western Ontario town, of population 835. Stock about $38,000.00, consisting of shelf and heavy hardware, furniture, groceries, crockery, tinware and graniteware, harness, wallpaper, tinshop and plumbing. Been in business 28 years. Good reasons for selling. Apply Box 382, Hardware and Metal.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

If interested, tear out this page and keep with letters to be answered.

Lloyd George
and the War

COL. JOHN BAYNE MACLEAN contributes to the March issue of MACLEAN'S MAGAZINE a strong article dealing with the need for efficiency in the Lloyd George Government and giving interesting information with reference to the young man who is rapidly coming to the front in Imperial affairs—Sir Eric Geddes, the head of the Admiralty. This contribution is one of a notable series.

„SIXTEEN MONTHS IN GERMANY.
What a Canadian Prisoner saw and heard there—and how he escaped," By John Evans

This article presents a picture of conditions in Germany and gives many new facts with reference to what is going on in that country. The writer worked for sixteen months in the mines of Westphalia and came in close contact at all times with the miners. The story of his escape is a thrilling one.

"CANADIANS IN MESOPOTAMIA."
By a Canadian Medical Officer.

Little has been known heretofore of the campaign in Mesopotamia. This article gives details of the campaign and of the part which Canadians are taking in it. It shows how the inefficiency of the first campaign has been done away with and how splendidly organized the British army now is. The article contains many interesting anecdotes of adventure on that front.

"LABOR THE DOMINANT FACTOR."
By Agnes C. Laut.

This is an article on the war situation as it is developing on this side of the Atlantic, showing that labor is becoming a dominant factor. In the United States the antagonistic attitude of the labor union is dying out and being replaced by a strong desire to assist in war measures.

"CANADA'S NEW BOSS."
By H. F. Gadsby.

A political article, dealing with the "man behind" Union Government. It gives interesting and exclusive information with reference to the political situation at Ottawa as it is developing since the election.

"A CASUALTY."
By Robert W. Service.

A war poem which tells of an experience which actually happened to Service while driving a motor ambulance on the Western Front. It will be illustrated by C. W. Jefferys.

Fiction in the March Number

"BY THE TIP OF AN EYELASH," by A. C. Allenson, illustrated by R. M. Brinkerhoff. A bright story combining business, love and horse racing.

"THE GARDEN OF SPICES," by L. M. Montgomery, illustrated by F. Weston Taylor. This is a most unusual and charming love story.

Two long instalments of the two serials **"THE PAWNS COUNT,"** by E. Phillips Oppenheim, and **"THE MAGIC MAKERS,"** by Alan Sullivan.

"THE GIRL ON THE VERANDAH," by Arthur Beverly Baxter, who wrote **"The Man Who Scoffed,"** and **"Mam'selle Butterfly."**

Regular Departments and Features

There are the regular features and departments: Review of Reviews; Business Outlook; The Investment Situation; The Nation's Business; Books; Women and Their Work. A food article by Miss Chapman is a feature, and a new Spring Department on Seeds and Garden Culture starts in this number.

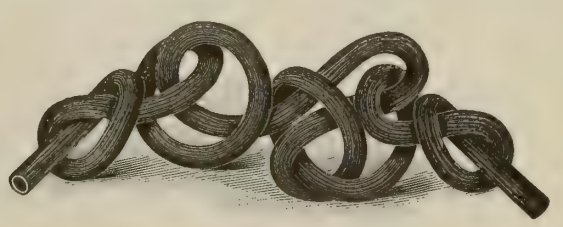
MacLean's Magazine
At all News Stands—20c.

"HENDRYX"

STANDARD STEEL AND BRASS CHAINS

MR. CHAIN USER: August, 1917.

For many years we have made a specialty of chain for manufacturer's use, and are well equipped for this business.



Our chain is made of special wire found by us to be best suited for the purpose. The links are well shaped, small and compact, making a heavy, strong chain.

A sample mailed to us of what you may need will be given immediate attention, and interesting prices quoted on any quantity. Yours very truly,

The Andrew B. Hendryx Company, New Haven, Conn.

Covering the World

HOYT'S
Babbitts and Solders

From Nome to Auckland, from 'Frisco to Archangel, from Glasgow to the Cape, from Vancouver to Singapore, wherever men go in ships, wherever wheels turn, there you will find Hoyt's Metals serving their several purposes.

From the four strategically located central establishments the far-flung battle line of the Hoyt sales organization reaches out to the uttermost edges of civilization.

Hoyt's Nickel Genuine, Hoyt's Trojan, and Hoyt's Frost King Babbitts are reducing friction in all parts of the world, while Hoyt's Bar and Wire Solders, Came Lead and Specialties are giving perfect satisfaction to all peoples.

Metals so universally demanded as are Hoyt's will surely satisfy you. Try them and see.

Best in Quality and Manufacture

Westwo REGD

Painted Sets for Wagon Plow and Implement

THE "GUARANTEED" LINE

Good Appearance Protected

The appearance goes a long way toward putting through a sale in selling wagon sets. Wagon sets put up in crates give insurance against bruised woods, marred finishes and other defects likely to discount its sale value.

Westwo REGD **Painted Sets are Put Up in Strong Crates**

Westwo line also covers a wide range of eveners, hitches, whiffletrees, neckyokes, etc., in sizes and style to suit all Western requirements.

Send for Westwo folder.

D. Ackland & Son
LIMITED
WINNIPEG CALGARY

GUARANTEE
All Westwo
Sets are guaranteed, and any defective part will be replaced free.

"NO GALL SORES"

Sweat Pads
Housings
Saddle-Blankets

"Keep Horses fit"

NOW is the time to make a display of Ventiplex goods.

Give prominence to them and they are certain to attract business.

Ventiplex Pads, Housings and Saddle Blankets assist in greater production because horses are always free from the handicap due to gall sores.

Ventiplex Goods lengthen the life and usefulness of a horse by removing irritation and giving comfort. They are made of fine wool felt, sanitary, hygienic, very durable and easily washed. Warranted to make the collar fit.

Boost this line --- you'll find it mighty profitable and very satisfactory.

Burlington Windsor Blanket Co., Limited

793 King Street West - TORONTO

LIGHT NARROW BUTTS

Packed the "National" Way, which means less handling and quicker sales

National Wrought Steel Light Narrow Butts come in three styles, as shown here, Loose Pin, Tight Pin and Ball Tip. They are perfectly made from cold rolled steel and will hang true and swing readily. They can be supplied in any finish desired.

To make their good qualities all the more appreciated and to make selling simpler, they are packed one dozen pairs in a box, *each pair in a separate envelope with screws.*

Selling a pair of these hinges entails just one operation on your part. You simply pass to your customer the sealed envelope containing both hinges and screws. No fussing around to find the right size screw. No delay, no mistakes—your customer perfectly satisfied.

You'll like handling "National" Hinges both because of quality and the handy way they're packed.

We would like to have your name on our list for the 1918 catalog.

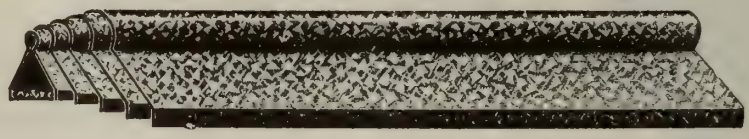
Repairing old buildings ***Fixing up new buildings***

Be Prepared!



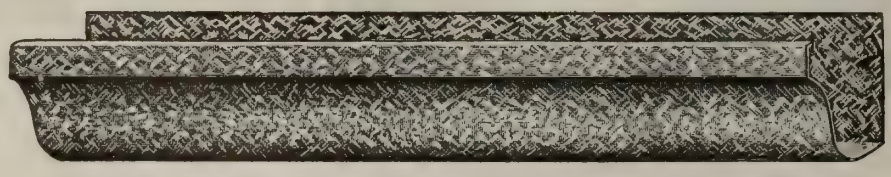
Pre-winter building and repairing offers great opportunities for business—the dealer who goes after it early and with a good line is the one that will reap the profits.

Wheeler-Bain products rank with the best of their kind manufactured anywhere.

Our *Rotary Screw Fan Ventilator* solves the ventilating problem better than anything of its kind on the market. Economical, too. A lot of them in use and giving perfect satisfaction.

Our *Conductor Pipe* is made of the best quality of galvanized iron. Seam is absolutely tight and straight and has stood the test of time.

Corrugated Roofing and Siding



Here's a good line that offers a fine opportunity. Seek out the orders that will be required for covering garages and barns and sell them our unsurpassed products—good profits.

Our Profitable Line of Products

Ridgeroll, Eavetrough, Skylights, Conductor Heads, Galvanized Sheets, Copper Sheets, Valleys, Elbows, Ventilators, Conductor Hooks, Tin Plates, etc.

STEWART HORSE CLIPPING MACHINES
STEWART SHEEP SHEARING MACHINES
CLARK AUTOMOBILE HEATERS
PRINCESS ELECTRIC FLAT IRONS
STEWART HANDY WORKER
STEWART HORSE and CATTLE GROOMING MACHINES, ETC.

Stewart goods are famous for the way they sell, serve and satisfy—and for their good profit to dealers. They are backed up by liberal dealer co-operation in the way of "Go to your dealer" advertising, display signs, materials, etc.

If you have never sold them be sure to try them this season. You'll be pleased with the results.

Stewart Horse Clipping Machines

Horse clipping machines will be in demand as soon as Spring comes. Not much time now—order at once and be prepared to make a good profit on this line.

Stewart Horse Clipping Machines cut keenest and last longest. There are more Stewart's sold than all others put together. They will get you the cream of the clipping machine business.

The Stewart No. 1 Ball Bearing Clipping Machine sells to the user in Canada for only $11.00. It's the machine dealers should stock.

Recommend the Stewart No. 1 Machine for clipping the udders and flanks of dairy cows. It is just what is needed, and the sale for this purpose is growing rapidly.

Order from your jobber now, while he has the stock to take care of you.

Your Jobber can supply you with Stewart Goods

If interested, tear out this page and keep with letters to be answered.

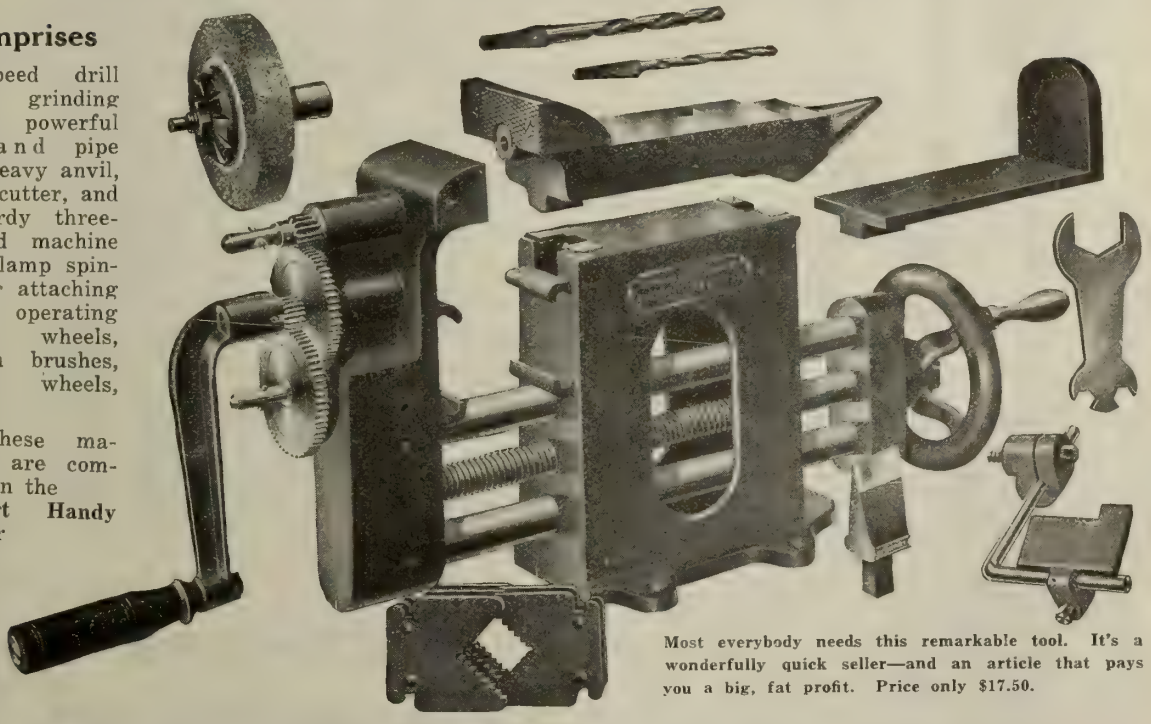
Stewart No. 9 Ball Bearing Sheep Shearing Machine
Retail Price $17.00

Here's a big seller for dealers in sheep localities.

Wool is bringing a big price to-day and for this reason you should boost the Stewart Sheep Shearing Machines. The additional wool secured in one shearing of even a small flock will pay for a Stewart No. 9, which is our best hand operated machine. Stewart Sheep Shearing Machines shear faster, cannot injure the sheep and give fully 15% **more wool** than can be obtained by shearing with hand blades.

Ball Bearing throughout, turns easy and will last a lifetime with ordinary care. Retail price with four combs and four cutters only $17.00.

Order now from your jobber.



The Stewart Handy Worker

Six-in-One Tool for the Farm, Shop, Garage and Home

Comprises

Two-speed drill 'press, grinding outfit, powerful vise and pipe vise, heavy anvil, metal cutter, and a sturdy three-speed machine with clamp spindle for attaching and operating emery wheels, scratch brushes, buffing wheels, etc.

All these machines are combined in the **Stewart Handy Worker**

Most everybody needs this remarkable tool. It's a wonderfully quick seller—and an article that pays you a big, fat profit. Price only $17.50.

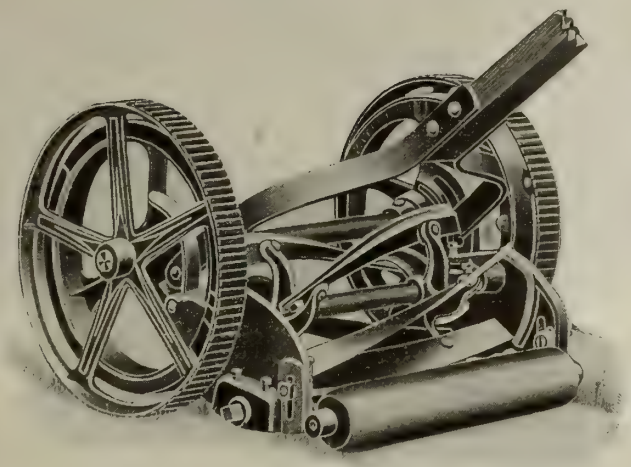
GOODELL-PRATT

1500 GOOD TOOLS



SCREW-DRIVERS

The Goodell-Pratt Pocket Screw-driver Set No. 231 is a mighty convenient, practical and deservedly popular tool that everyone has a use for every day. The Set consists of a Hollow Handle, with a Chuck, three small Screw-driver Blades and a Reamer. When not in use, the Chuck and Blades are contained inside of the handle. The whole tool is exceptionally well made, the Blades are of tool steel and the Handle is handsomely polished, nickeled and buffed. It is 3¼ inches long when closed and weighs 4 ounces. A practically indestructible tool. Dealers will find our line of Screw-drivers a very comprehensive one as it contains a tool for every class of work. There are 20 different models, each one adapted to its particular job. Goodell-Pratt Advertised 1,500 Good Tools offer great profit-producing possibilities. Better get in line.

Goodell-Pratt Company

Bigger Profits From Your Dry Cell Sales—Write Me Personally for My Plan

W. M. Turnley, Manager
The Dominion Battery Co., Limited, Toronto

I WANT to tell you how to increase your Dry Cell sales and how to make more money on every sale. If you're getting ALL the Dry Cell business in your community, my plan will increase your **profits.** And, if your Dry Cell business can stand more prosperity, you surely should write me immediately. At any rate, since it costs nothing to learn what I have to offer—**write me now.**

Here's a better Dry Cell that satisfies everyone—the RELIABLE. Dealers like to sell it—users like to buy it. Made in four types for every Dry Cell use—Ignition, Telephone. Regular and Three-volt Lighting — each type the best when used in the service for which it is intended.

RELIABLE Dry Cells sell too fast to lose their power on the shelf. Still, RELIABLE Dry Cells are made to have extraordinarily long shelf life.

Conservation

never meant so much to all of us—to the whole British Empire—as it does to-day. Admiral Jellicoe said recently that the people in England may expect a hard time during the next four or five months; we have to save every scrap of food to send enough to keep them from starvation and to feed our soldiers. This year there is an abundance of ice which must be used to conserve the food we have, consequently the up-to-the-minute hardware man will early exhibit in his store a refrigerator that is a necessity of the time.

The Frost King All-Metal Refrigerator

is an innovation which will replace the old heavy refrigerator

Note the Following Features

CHEAP—Sells at a popular price.

LIGHT—Weighs only 28 lbs. One person can carry it from position to position.

COMPACT—Height from floor to top is 33½ inches; width is 20 inches; depth is 14 inches.

ATTRACTIVE—Proportions are pleasing. Color is pearl grey. Finish is enamel — double-coated. An inconspicuous article of furniture, yet has style. Door is defined by heavy embossing. Name, "FROST KING" is in gold on embossed medallion.

STRONG—Made of sheet metal heavily galvanized (rustless). All parts bolted together so they can be taken apart or repaired simply. Construction is first-class. Hinges are solid and stout

SANITARY—No wood or other absorbent materials used. Dampness, odors and germ-breeding surfaces and corners entirely absent.

LARGE ICE HOLDER—Ice holder is galvanized sheet steel, with a capacity of 25 lbs. of ice. Measures 18 x 11 x 8 inches. Is instantly removable. Ice put in from top. Top lifts in its entirety.

COMMODIOUS FOOD CHAMBER—Measures 18 x 13 x 19 inches. Has grill shelf removable, made of galvanized sheet metal.

DROP DOOR—Door is hinged horizontally and when open forms a braced shelf.

INSULATION—Ice holder is suspended in ice chamber and is separated from outer walls and top by air chambers after the manner of a thermos bottle, thus economizing in ice and maintaining an even icy-cold temperature.

WATER ESCAPE—Water drains to waste pipe, which empties into pan placed under the refrigerator or through a pipe passing through the floor.

FEET—Refrigerator has cast-iron feet, bolted on. Bottom of refrigerator stands 5 inches above floor. Thus ample space for pan for water from melting ice is provided.

The "Frost King" is suitable for any home, summer residence, apartments and especially adaptable to camp use.

Procured from all leading jobbers or direct from us.

Stanley Tools

BAILEY IRON PLANES

The Standard For More Than Fifty Years

Made by the most skilled Plane makers in the world.

The average Carpenter invariably demands a *Bailey*.

He learned his trade by their use as did his father before him. You never have to "carry over" a *Bailey Plane*. They are always in demand and constitute one of the most staple articles a Hardware Dealer stocks.

Improvements are constantly being made in their manufacture, tending to make them daily more popular and more sought after by discriminating Carpenters and Mechanics.

If you do not carry these Planes, arrange to do so at once. You will be surprised how your Plane sales will increase.

Westclox

They All Have the Patented Construction

A BIG factor in the success of *Westclox* alarms has been the patented *Westclox* construction. These clocks have made good because they are as good all through as they look outside.

All *Westclox* alarms —the complete line, now nationally advertised— have this same type of construction.

Needle-fine pivots of polished steel greatly reduce friction. Lighter main-springs are required. There is less wear and tear on the move ment.

That's why *Westclox* win friends quickly and hold them.

The new advertising is telling your customers about this entire line and about the patented construction which is a *Westclox* family trait.

Advertising played a big part in building *Westclox* reputation. Now that same kind of advertising is winning friends for every clock in the line.

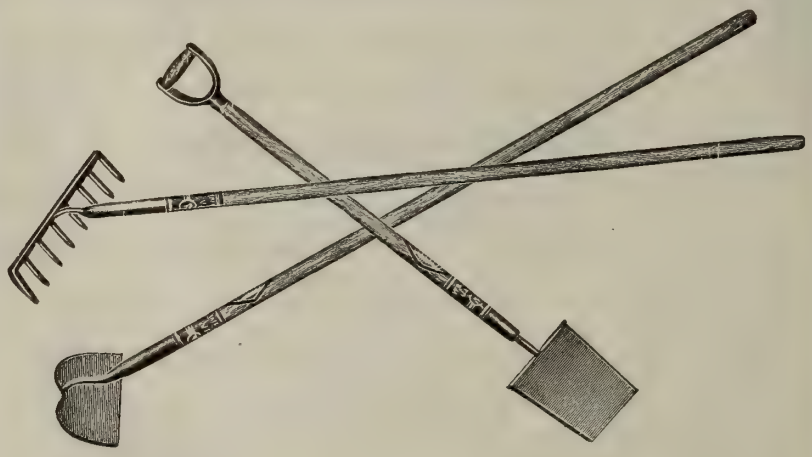
Our New Handy Garden Hoe

will hoe, plow, list, pulverize, cover, and cultivate

As a Hoe It breaks up the soil easily..



As a Plow It has the angle cutting Shear of the Plow; it cuts a smooth level bottom, and completely turns the surface of the soil with its full Stubble Mold Board; and it cuts and turns the roots of the weeds to the sun and air, leaving a clean Pulverized Surface.

As a Lister It cuts a Smooth, Even Furrow.

As a Pulverizer By pushing it backwards in a Listed furrow, it Pulverizes, smooths and Packs the fine mulch for a Perfect Seed-bed and Furrow.

To Cover Seeds After the seeds have been planted in the furrow, push the Lister backwards over the furrow, and by raising or lowering the point of the handle you can cover to any uniform depth required.

As a Pulverizing Cultivator It can be used as a SURFACE CULTIVATOR or as a SUBSOIL CULTIVATOR.

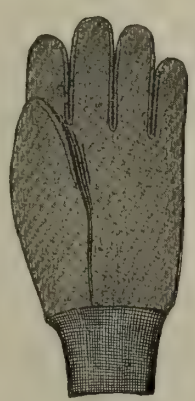
How many horse owners in your community?

Just think. There are more than a few. And every one of them appreciates the fact that a sore shoulder is a serious discount to the value of a horse.

Right there is where you can get them interested in the TAPATCO BRAND COLLAR PAD—the pad that keeps the horse's shoulders in good working condition all day and every day.

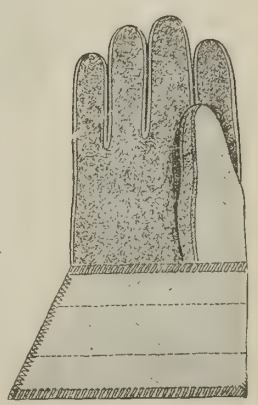


The excellent grade of cotton drill from which the TAPATCO Pad is made and the specially prepared composite stuffing in every one is a guarantee of long wear under the most trying conditions.

Note Exclusive Tapatco Patent

—A new patented staple and felt reinforcing device for attaching the hooks to the pad. This prevents the hooks from pulling off easily, even where the fabric has been weakened by long use. **This form of attachment is found only on pads manufactured by us.**

You'll need a big supply of Tapatco Cotton Gloves this year



Increased activities on the farm and in the field of production generally will boost the demand for TAPATCO Gloves.

These are high-grade, easy-selling gloves that will stand up and satisfy under the most severe service. There are none better for use in field, garden, workshop or factory.

Order through your jobber now and play up TAPATCO—the glove of service and quality. Made in Band Top, Knit Wrist and Gauntlet Styles, light, medium and heavy weight. Jersey gloves and mitts in Oxford, Tan and Slate.

We also make a leatherette-faced glove that is a winner everywhere.

ODD SIZES!

"You'll get it from Baines & Peckover" — that's the common expression in the metal trades when it comes to odd sizes, special lengths, etc., in bar iron and steel, sheets, bolts, etc. Of course, we carry standard sizes, too, in immense variety. You'll always get what you want, quickly, from Baines & Peckover.

Merchant Bar Iron and Steel

In the largest variety in odd and special sizes, for example: rounds from 1/8" to 12½" diameter.

Soft irons—Staybolt, Swedes, Refined, etc.

Steels—Nickel (up to 5½" diameter round), High Carbon, Reeled, Shafting, etc. In fact everything in cold rolled, round, square, Hexagon and Flat. Also Strips, Flat Wire, etc. Tool Steels of all kinds. Hoops, Bands and Box Strapping.

Reinforcing steel for concrete—We cut bars to any length and bend to shape ready for use. Expanded Metal and Lath, Column Spirals, Stirrups, etc. We have everything in this line and enormous stocks at that. You get quick shipment here.

Angles, Channels, Tees, Beams—in every size you are likely to want, and cut to length.

Rails and all their accessories.

Sheets

We have them in all gauges and sizes—standard and special. Galvanized, Black, Corrugated, Canada Plate, Tin Plate, etc.

Plates in plain and chequered, anything cut to any size to suit anybody.

Chain—Proof-Coil and BBB.

Rope—in Manila and Wire Cable, all sizes.

Bolts

We carry an enormous stock of Bolts, Screws, Nails, Nuts, Rivets, Washers, etc., of all kinds. It is worth your while to get acquainted with our stocks as we can handle your emergency orders.

☛—We keep a stock of Bolts up to 36" in length.

Quick shipments are the rule with us. Send us your orders.

Get our Stock List—it shows the biggest variety listed in iron and steel and their various products. Write for it to-day.

A Winner All Along the Line

Put the Barnet in your show rooms and watch sales grow. In the Barnet you can show your customer every modern feature worth having. The Barnet's patented syphon and air circulating systems insure perfect refrigeration.

Write to-day for full particulars and attractive selling proposition.

THE BARNET

Made in Canada

No. 6

Made in ash, birch, or oak; width 66½", depth 22½", height 58½", ice capacity 240 lbs.

Insulation

No less than eleven protecting walls —flax fibre—correct dead air space—chemically prepared papers.

Circulation

Improved syphon principle; foods preserved sweet, fresh and cool, in unbroken current of pure, dry air.

No Moisture

As an experiment, matches can be lighted on the walls of the ice chamber after being enclosed in the refrigerator many days.

Drainage

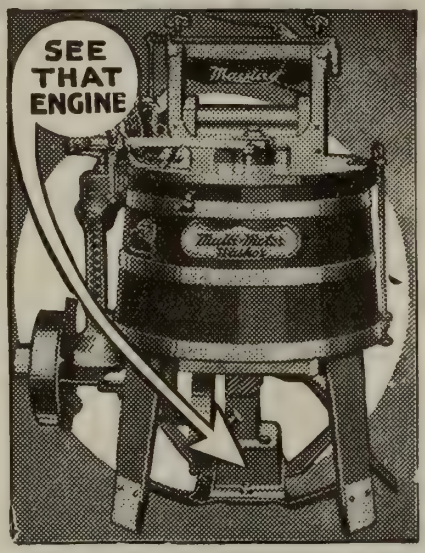
No drainage pipe—simply an opening in refrigerator floor. This avoids accumulation of slimy matter and odors.

Ventilation

The Barnet system is exclusive and is protected by our patents. Prevents contamination and co-mingling of odors.

Vitreous Porcelain Linings

A great attraction to women—easy-to-keep-clean; will not check or peel. The Barnet carries a hard and fast guarantee.



The Barnet syphon system is the highest achievement in effective refrigeration. It appeals to the best trade. To provide a complete line, we also manufacture a low priced refrigerator that is good value for the money.

Maytag
Multi-Motor Washer
With
Swinging Reversible Wringer

Maytag
Electric Washer
With
Swinging Reversible Wringer

Showing how wringer swings to any desired position.

To-day the Maytag Policy of helping the Dealer is, in part, as follows:

Intensive advertising to the consumer, producing the inquiries which are turned over to the dealer. The prospective buyers are followed up direct from our Western headquarters at Winnipeg, and all prospective buyers are referred direct to the store of our customer. Direct campaigns by mail to prospects whose names are furnished by the dealer.

Our instruction book, The Laundry Manual, which is a book of practical information for both Dealer and Buyer, is absolutely free and contains, in addition to detailed description of the Washers, many valuable formulas and receipts which are appreciated by all. Our Literature is the best. It not only tells the whole story but is artistic and attractive.

The Maytag policy has always been one of close co-operation with the dealer, and to-day it is broader than ever.

WE WANT ONE DEALER IN EVERY TOWN·
WRITE FOR OUR DEALERS PROPOSITION.

The Maytag Washers are getting into the homes of Canada, because they save time, labor, clothes and money. The Maytag Washers have an established reputation, are an unqualified success from every point of view. This is the reason they have won their way into the hearts of the housewives of Canada, and this is one of the many reasons why it will pay you, Mr. Dealer, to get on the band-wagon while the getting is good.

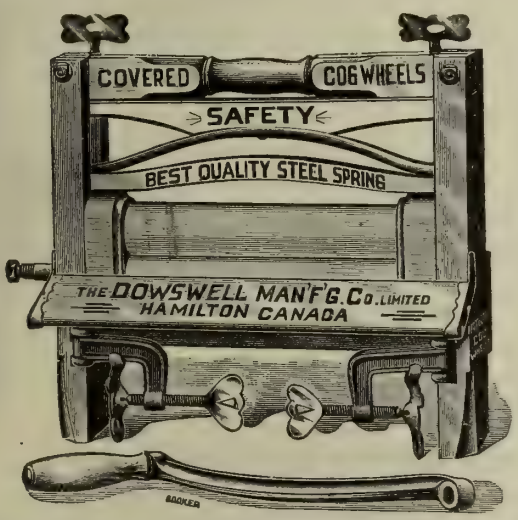
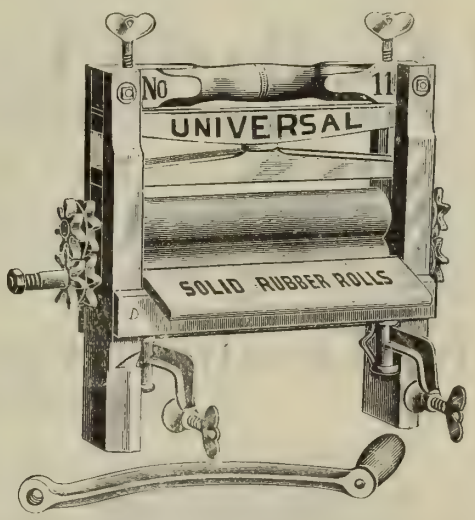
Satisfaction in Wringers

The Backbone of a Wringer is the Quality of its Rolls



¶ For the Rolls in our Wringers the raw material is selected with great care. They are manufactured by only experienced experts, using the most modern methods. We give full Wringer value for money received.

THE BICYCLE—A popular, high grade wringer, has steel ball bearings, covered cog wheels, sure-grip tub clamps and extra high grade rolls 11 x 1¾".



THE EZE—Has steel ball bearings, covered cog wheels, folding apron, sure-grip tub clamps. Standard grade rolls 11 x 1¾".

THE "SAFETY"—For round or square tubs, fitted with steel ball bearings, sure grip tub clamps. Extra grade rolls 11" x 1¾".

OUR WASHING MACHINES—Are just as good as our Wringers.

THE UNIVERSAL—Low priced. 10 or 11" rolls.

THE NEW IDEA STYLE B—It is the latest and best in detachable tub washers. Complete with permanent wringer stand. Easy on the clothes, hard on the dirt.

Laco Lamps Meet the Present Demand for Economy in Power

You can not only cut your lighting costs and sell other goods to better advantage by lighting your own store with

LACO NITRO LAMPS

but you can build a profitable, trade-winning business by *selling* them.

LACO NITRO LAMPS are the latest development of the tungsten lamp for use in stores, offices, factories, warehouses, churches, schools and other public buildings. They comprise a tungsten filament burning in nitrogen gas. They consume less current, yet give a greater candle-power per watt than any other type of lamp.

LACO TUNGSTEN LAMPS are the standard of quality for *home* lighting. Their strongest selling argument is the same as Laco Nitro: *Greater Efficiency at Lower Maintenance Cost.*

Our Big Advertising Campaign

is familiarizing the public throughout Canada with the reasons for Laco superiority, and is directing enquiries to the logical source of supply—the local Hardware and Electrical Shop. If you have not yet linked up with this profitable business, lose no time in communicating with our nearest distributing centre.

WAKYTE MFG Co.
WAKYTE
WINNIPEG · CANADA

People will patronize the store that handles guaranteed goods.

The WAKYTE Label is an absolute guarantee to both Dealer and Consumer.

Wakyte Closets, Chemical and Barrel Trucks

WAKYTE CLOSET NO. SPECIAL

The Progressive Hardware Dealer desires to handle goods on which he can make a good profit and a quick turnover, at the same time satisfying his customers.

WAKYTE Quality Goods at low prices ensure a quick turnover to the Dealer, and absolute satisfaction to the Purchaser. This explains why **WAKYTE** Closets and Chemical are now carried in stock by practically every Hardware Dealer from Coast to Coast, in preference to all other makes.

When you sell **WAKYTE** Closets or Chemical to your customers you know that you have given them more value for their money than they can get anywhere else. These closets are made in three designs (but only ONE Quality), No. 2, No. 3 and Special. The seat is finished in Mahogany, and the body in Maroon Enamel.

WAKYTE POWDER CHEMICAL

Wakyte Powder Chemical

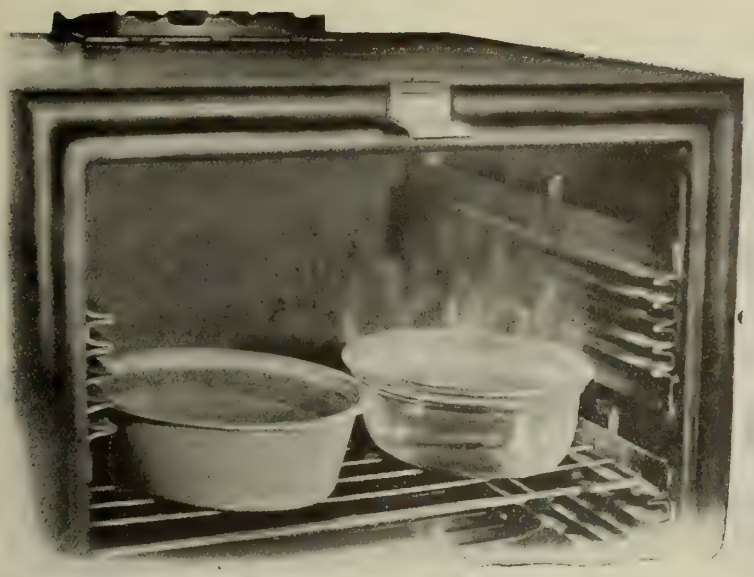
We recommend your ordering **WAKYTE** Powder Chemical to replace liquid chemical previously supplied. It is put up in packages having the same capacity as one gallon cans. A package costs less than a gallon of liquid, yet is equal to nearly 1½ gallons. In addition to this it may be shipped under any weather conditions without loss or damage.

PATENTED

Wakyte Barrel Trucks

We strongly recommend your equipping your store with **WAKYTE** Barrel Trucks. No such convenience has ever been offered to you for handling your barrels of oil as this truck, and you cannot make a better investment than by equipping your store with them NOW. They are inexpensive and will last almost a lifetime. Answers three purposes, viz.: Hoist, Truck and Permanent Stand for holding barrels of liquid.

Photographs and prices of **WAKYTE** 1918 Models are in the hands of all Wholesale Hardware travellers, who are now booking orders for Fall delivery on **WAKYTE** Closets, Chemical, Barrel Trucks, etc. We recommend your placing your order at once, as by doing this you are guaranteed present prices for Fall delivery.



WAKYLE CLOSET NO. 2

For the convenience of our customers, a complete stock of **WAKYTE** goods is carried at Winnipeg, Edmonton, Calgary, Saskatoon and London, Ontario.

We solicit your inquiries and orders.

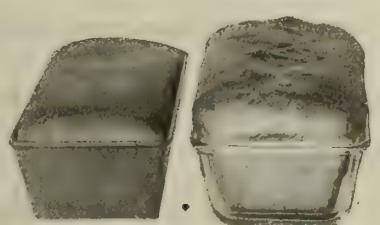
Sensational test

A metal pan and a Pyrex dish were filled with cold water and put into an oven. The water in the Pyrex dish boiled in ten minutes. The water in the metal dish, though left in the oven for two hours, never boiled. This is because metal shuts out 60% of the oven heat from the water, while all the oven heat goes right through Pyrex. This test can be duplicated in every coal oven and almost every gas one. It is only in exceptional ovens that it is ever possible to get a great enough heat to boil water in metal.

Revolutionizes cooking!



The simple test photographed above shows how much more heat Pyrex absorbs than ordinary pans. The two loaves of bread prove how much better this extra, more even heat cooks food.

Ordinary pans waste fuel, time and flavor

Scientists tell us there are two kinds of heat in the oven—hot air heat and heat which radiates from the walls and bottom of the oven. Only one-third of oven heat is hot air. Two-thirds is radiant heat.

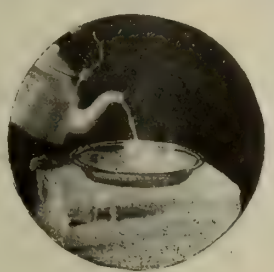
Only the hot air can heat a metal pan. Just as an iron shutter keeps out the sun's rays, so every metal pan keeps out radiant heat. Just as a window pane lets in the warmth of sunlight, so all the oven heat floods through Pyrex.

This means that food cooked in Pyrex gets all the heat instead of just one-third. This is why every food cooked in Pyrex is so thoroughly, so evenly cooked, why it is so much more delicious. This is why bread baked in Pyrex rises an inch higher, why pies have crisp undercrusts just like the top, why meat is so tender.

Baked in ordinary pan *Baked in Pyrex*

Pyrex bakes bread an inch higher. This photograph of the same dough baked in the same amount of the same sized pans is proving it to millions

6,000,000 people will learn these facts this year



Full pages in The Ladies' Home Journal, The Saturday Evening Post and Good Housekeeping, sometimes in color, will tell these and other amazing facts about Pyrex to millions of people in every city and town. McCall's Magazine, Christian Herald and Jacobs Religious List, comprising forty-nine magazines, will spread this news to smaller towns and villages and even the heart of the country this year. 6,000,000 families in the United States and Canada will learn the startling improvement Pyrex makes in cooking.

You will feel the demand in your town. Your customers will be asking for Pyrex.

Write to-day for full information and the 1918 Price List.

PYREX SALES DIVISION
304 Tioga Ave., Corning, N.Y.

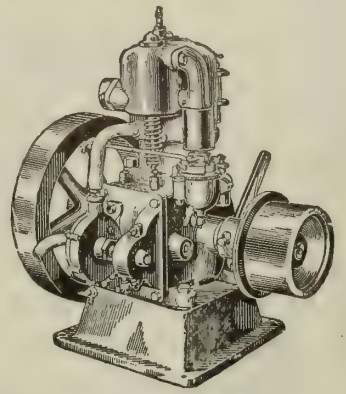
Cushman

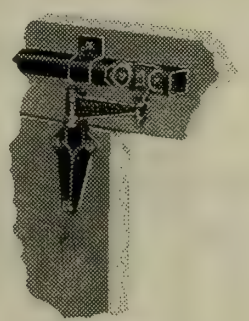
Light Weight Engines



FOR ALL FARM WORK—4 TO 20 H.P. These engines are in big demand in the West.

FARMERS HANDY 4 H.P. TRUCK
Easy to move around from job to job, Same engine used on binder

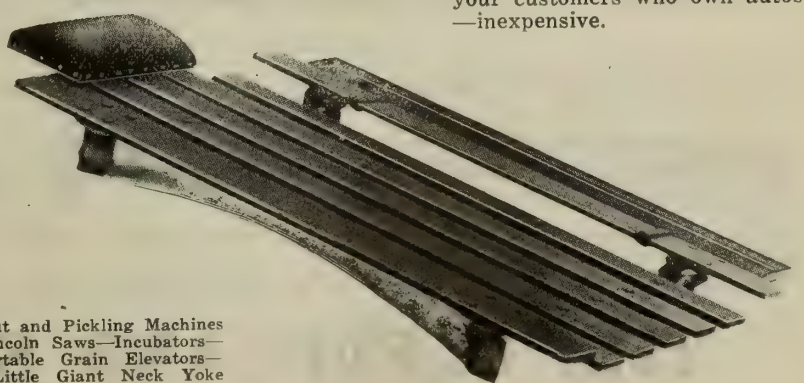
Cushman Engines are the lightest weight farm engines in the world, yet they are even more steady running, quiet and dependable than most heavy engines, because of Throttle Governor, perfect balance and almost no friction or vibration.



May be attached to machines such as binders, balers, etc., to save a team. Easy to move around. Moving parts enclosed and run in bath of oil. Run at any speed —speed changed while running. Direct water circulating pump prevents overheating. Schebler Carburetor and Friction Clutch Pulley.

Klean Kwick Washer

KLEAN KWICK VACUUM WASHERS are taking the housewives by storm. They are "making good" in lightening the burden of wash-day and cleaning clothes as no other washer is doing.
Built on a new and correct principle of washing—forcing and pulling the hot suds through the clothes by air pressure and suction.
The heart of the **Klean Kwick Washer** is the STOMPER, which does the work. The stomper is a cone, that when attached to our improved mechanical construction forces over a thousand gallons of hot water and steam through the clothes in three to five minutes. This means quick washing, clean washing, easy washing. **Sell this washer—it's a money-maker.**



All Hangers Equipped with Roller Bearings.

WAGNER
Garage and Barn Door Hanger

An improved design: Far in advance of any ordinary garage or door hanger.
Opening a clumsy or awkward door is a distasteful operation. A child can open the heaviest and clumsiest of doors equipped with the WAGNER improved hanger. An easy line to sell and nice profit on each sale.

WAGNER Auto Creeper
Complete with Metal Tool Rack

A garage is not half equipped without an auto creeper. This WAGNER is easy-running, strong and efficient. Sell one to all your customers who own autos —inexpensive.

Write for a full account of each of these Cushman lines. Any information gladly furnished.

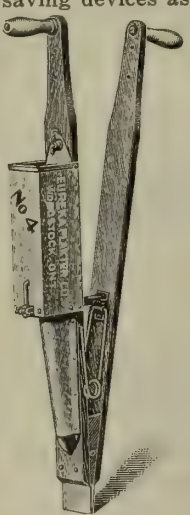
WIRE

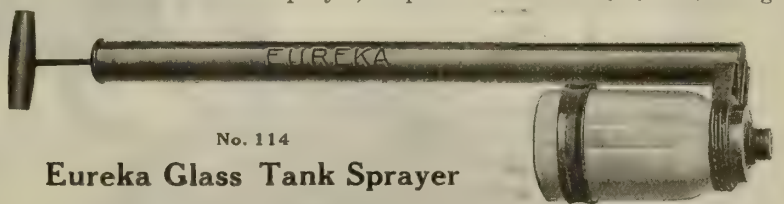
All Those Extra Acres

mean added sales of Garden Implements



A larger area of Canadian soil will be under cultivation this year than ever before, and this despite the fact that there are fewer men to do the work. The only solution is the more general adoption of such labor-saving devices as are shown here.

It is the patriotic duty of all Hardware Dealers to make careful and well thought-out plans to place as many Eureka Time-Saving Tools as possible on Canadian Gardens this Spring. Let "Greater Production" be your watchward and Eureka Tools your good helpers.



Fountain Compressed Air Sprayer

No complex or intricate parts, positive and automatic in action, easily operated, easily controlled—a time-saver, labor-saving and solution-saver. Will spray 2,000 plants in one minute on one filling.

EUREKA CORN PLANTER

In one and two-hand styles, adjustable seed guard, positive, accurate, well made, nicely finished, very durable.

No. 114

Eureka Glass Tank Sprayer

Reliable, durable, economical—a neat appearing, efficient sprayer for potatoes, small shrubs, live stock or for disinfecting poultry houses.

The EUREKA PLANTER Co., Ltd. WOODSTOCK, Ont.

When roofs begin to leak this Spring!

When the snow thaws and the heavy spring rains come there'll be leaky roofs all about you. Turn this circumstance to your advantage by having in stock a supply of Reed's Patent Plastic Asphalt Roof Cement. This is the roof cement that for twenty-five years has stood the test of heat, cold, rain, snow and wind and has never failed to stick where laid. It mends all manner of leaks in slate, metal, gravel and prepared roofs, is effective for pointing around Chimneys, Skylights and Dormer Windows, and for repairing coping stones, gutters and wood and stone work. It is the most useful substance a roofer or plumber can have, and it gives a satisfaction that reflects on the Dealer who sells it.

Reed's Patent Plastic Asphalt Roof Cement can be obtained from all jobbers or direct from the makers. It is put up in 1, 5 and 10 lb. tins, in drums of 125 lbs. and in barrels of 500 lbs. A trial order of the smaller tins will soon demonstrate its stability and value

SMALL TOOLS

P. & W. Adjustable BLADE REAMERS

These reamers have eccentric relief and can be set to size without regrinding. They are unexcelled for design and simplicity and ease of adjustment. The eccentrically relieved blades are stronger than others, do not chatter, and produce a smoother hole. The hand, shell and fluted chucking reamers have interchangeable nuts, screws and wrenches. The bottom of a hole can readily be faced. By a simple adjustment of the blades the reamers can easily be set to size without regrinding.

PROMPT SERVICE

is assured at our nearest store, where P. & W. Small Tools are carried in stock. Place your order there to-day.

"Reliable" Agents are making money

"Oh dear! This is hard work."

"I'm not One Bit tired, Grandma."

Because they have the best churn proposition on the market agents for RELIABLE Patent Dash Churns are reaping a bountiful harvest of orders.

Every woman who churns has at some time used an old-fashioned dash churn. Although she may now be using some patent churn she still remembers longingly the beautiful butter the old dash churn made, and if it wasn't for the heavy labor involved she would go back to the old methods.

It's this fact which makes RELIABLE Churns so much easier to sell than other makes. The "RELIABLE" is a dash churn with the labor removed. The tried and proven method of butter-making embodied in the old dash churn is linked up in the "RELIABLE" with a simple, effective, fool-proof mechanism which relieves the operator of practically all labor.

In selling a "RELIABLE" churn you are not handicapped by first having to overcome the prejudice usually entertained in regard to patent churns. Your prospect has, through his or her own experience, been sold on the dash principle. Selling the "RELIABLE" is simply a matter of securing the prospect's confidence, and with the positive five-year guarantee behind you that is an easy matter.

One agent sold 14 "RELIABLES" in one day, another 11, another sold 30 in a week, and another 25. That's the way they go, once you introduce one or two in a locality everybody wants one.

If there is no "RELIABLE" agent in your district be advised to write at once and secure the Agency yourself.

There's good money in selling "Reliable" Churns. The following prices are effective in Ontario, Quebec and Maritime Provinces:

No. 4 with Pulley or Crank, $6.30, retails at $ 9.75
No. 5 with Pulley or Crank, 6.50, retails at 10.00
No. 6 with Pulley or Crank, 6.50, retails at 10.00

Complete with 1/20 H.P. Robins and Meyers Motor $31.00. Retails at $35.00.

The Reliable Churn Co. of Canada

T. W. FOSTER, MGR., 141 King St. E., TORONTO

This Help Costs You Nothing

"RELIABLE" PATENT DASH CHURNS are being advertised in *Family Herald & Weekly Star, Farmers' Advocate, Ottawa Valley Journal, Farmers' Magazine, Toronto Globe, Toronto Star,* and the 55 *Weeklies* on the *Hamilton Union List.*

They have also been demonstrated at the *Canadian National Exhibition.*

The Easy Washer

More than an easy washer—it is a fast and careful washer. Not only rubs the clothes naturally the way a woman does when washing by hand, but the double acting rub permits the washing to be done in half the time required with other machines. The two rubbing boards built on the principle of a washboard, gives more run than any other machine made.

Requires but small quantity of water, will not tear the finest fabric, or bunch the clothes. The system of this washer makes it supreme of all machines, and appeals readily to the housewife. Made in two sizes for "standard" and large families.

Little Giant
Screw Plates

There is a Little Giant Screw Plate for every possible need for mechanics, plumbers, blacksmith shops, garages, automobile owners, steamfitters, electrical conduit workers, ranches, mines, etc.

All Little Giant Screw Plates are furnished with Little Giant Dies. These have recently been improved by the application of a new idea.

Both sides of the die are bevelled so that the die may be reversed and the screw cut from either the face side or through the guide. Little Giant Dies are adjustable by means of set screws at the end of each half, and once adjusted and the guide screwed on, they are held in the collet as tightly as a solid piece.

Of Importance to You

Here's What We Are Telling Hack Saw Users

An Epoch Making Event in the Hack Saw Field

a chart awaits your request—

If interested, tear out this page and keep with letters to be answered.

YOU SHOULD KNOW

The Starrett Hack Saw Chart will now guide both dealer and user in their selection of the proper blades

The Standardization of Hack Saw Practice by Starrett

An enormous reduction in hack saw waste is now possible through the use of the Starrett Chart, which tells you just what saw to use in hand frame or machine to get absolutely the best results on every kind of metal.

Starrett Hack Saws

are made in a wide variety of sizes and flexibility, and of number, shape, and set of teeth,—veritably a saw for every conceivable purpose,—of Tungsten steel, properly hardened for their duty, with milled teeth of the right set.

Are you getting all the value that Starrett put into the saw? You will never know until you use a Starrett Hack Saw Chart as your guide. By the chart it is easily possible to select a saw that will give from 25 to 100 percent more in cutting power or endurance than one not suited for the job.

An indispensable help to every STARRETT HACK SAW USER—and the reason why every hack saw user should use Starretts. Send immediately for this most helpful chart. Printed on heavy card 5½ by 9 inches, eyeleted for hanging. Sent FREE. Use the coupon.

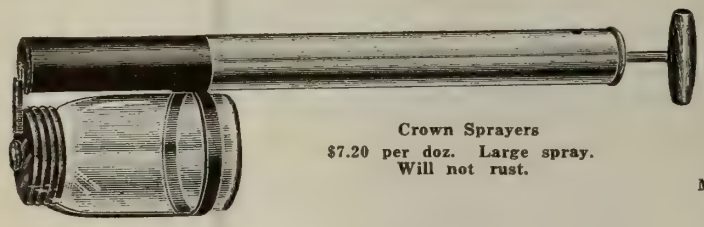
COLLINS SPRAYERS

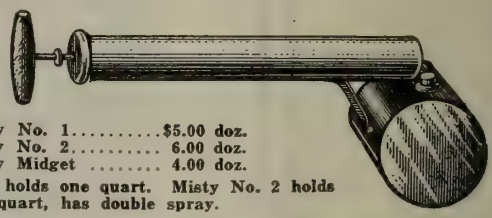
Patent Stove Pipe, etc.

are the best that money can buy



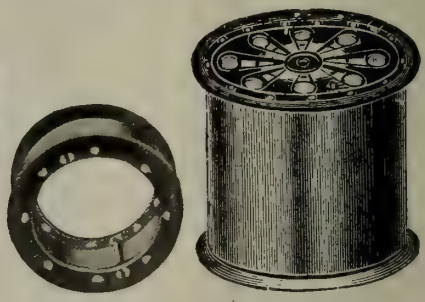
Our aim is to make our lines as attractive in appearance and price as possible. We have endeavored to simplify everything we make so that it does not require a skilled mechanic to operate.

During the war we have found it profitable to push the lines that aid in production of foodstuffs. Spraying every year saves millions of dollars' worth of the Nation's food supplies.



We have here listed some of our leading lines, giving the trade price. We would esteem it a favor if you asked for our new catalogue just off the press.

$5.50 each. Heavy stamped 22-gauge heads reinforced with bands. Relief Valve.

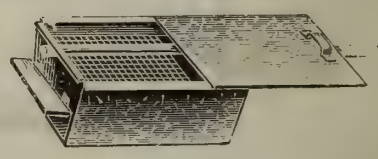


Crown Sprayers
$7.20 per doz. Large spray. Will not rust.

Misty No. 1.....$5.00 doz.
Misty No. 2..... 6.00 doz.
Misty Midget ..... 4.00 doz.
Misty No. 1 holds one quart. Misty No. 2 holds quart, has double spray.

Canuck Powder Gun, $6.00 doz.

Partition Thimbles
$5.40 per doz.



Floor Thimbles
$7.20 per doz.

A full line of Solid Thimbles.

Pipe	Per 100
7-inch, heavy	$21.80
7-inch, light	19.00
6-inch, heavy	20.50
6-inch, light	18.00

Every length of our pipe is guaranteed and is sure to prove satisfactory. Shipped 25 to crate. Fastened with two special rivets.

Sturdy Ash Sifter
Best Sifter. Sifts so quick. $2.40 per doz.

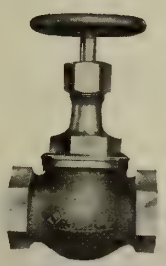
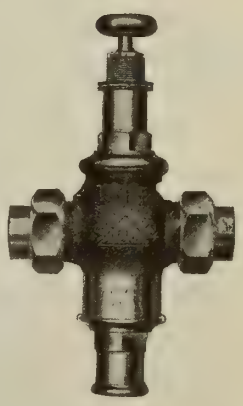
TRADE MARK J.M.T. REGISTERED A GUARANTEE OF QUALITY



Consistently High in Quality

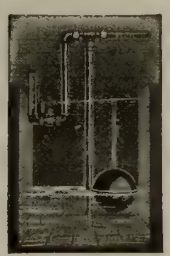
J.M.T. Products have acquired their present enviable reputation through day-in-and day-out high quality. There is never a dimunition of quality, rather there is a steady improvement. Conscientious effort to give honest value and careful inspection throughout the process of manufacture insure perfect goods always.



Stack Water Heater

--the Heater that Conserves

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated. As a consequence circulation is very rapid, a greater amount of water being heated in a given time than is possible with any other type of heater. More hot water with a smaller consumption of gas—that's true economy.



J.M.T. Valve

WAR TIME ECONOMY

will demand the CONNOR BEAVER Washing Machines as the solution to the trials and hard work of wash day. With the CONNOR BEAVER Washing Machine it is not any longer wash day but Wash Hour. It is the release from all day drudgery over the old fashioned wash tub. An extra day each week of the year put back into the calendar.

Top view showing CONNOR BEAVER Washing Machine closed. Note alternative position of operating handle, to operate while seated. Machine cut gears for smooth and quiet running take away all friction and loss of power. High Speed Fly Wheel carries the load.

The open, four-winged Dolly gives full and free circulation of the hot suds, producing quick and effective results.

By the attachment of a flange pulley, machine can be operated by belt drive.

We carry a complete stock of Washing Machines and Clothes Wringers for prompt shipment. Write us for prices.

Cleaning-up time is here

The J D Lawn Rake and Dandelion Stripper

WHY

spoil your Lawn and Grass with a hard, rough rake. Reasons for using the J D Patented Lawn Rake:

Cleans lawn well without injuring the grass. Cleans itself, thus saves time.

Strips smallest buds, preventing any blossom whatever, hence no dandelions second year. See section above.

For top dressing has no equal and a sieve is unnecessary.

Picks up peanut shells, matches, cigar stubs, small stones, acorns, etc.

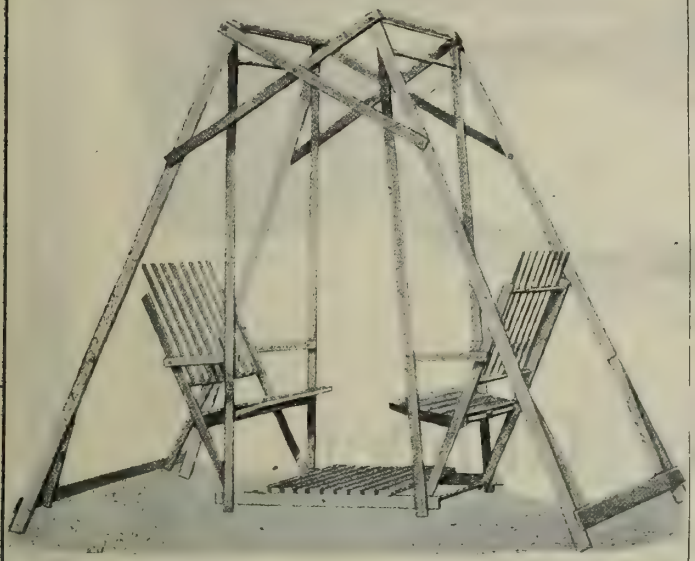
SAMUELS' "CANADA" Dustless ASH SIFTER

With its new Sales-making Feature

To the already numerous distinctive features of Samuels' "Canada" Dustless Ash Sifter has been added one which makes for greater convenience in handling the sifted ashes. The stiffening bands on the revolving sieve have been so widened as to cause all the screenings to fall to the centre of the can. As the illustration indicates, a smaller ash can or pail may be placed inside the waste can and so catch all the screenings, which can then be removed more easily than if the larger can had to be carried out. This feature also makes for longer life for the Samuels' Sifter, since the waste can is not subject to the ash man's abuse.

Previously the Samuels' Sifter had the most convenient receptacle for unsifted ashes, the simplest and least laborious method of screening the ashes and the handiest means of collecting the cinders. Now with this new method of collecting the screenings it leaves all other sifters hopelessly behind.

The Samuels' is the sifter for sales and satisfaction. Do you know how inexpensive it is?



J. SAMUELS, 275 Queen Street West Toronto

Show Her the Way

FOR goodness' sake, cries the average housewife, show us how to save money out of the deluge of sky-high prices for meats, sugar, flour—everything. And seldom a thought has she of what a tidy sum can be saved every little while by checking up the honest mistakes of grocer, butcher, etc. Show her.

Just a bit of enterprise, pushing the Renfrew Scale to the front—displaying it—and showing her how it soon pays for itself will stir up a tidy lot of sales worth while. Right now is the "psychological moment."

Clinch your sales by showing the Government Inspector's Certificate of correct weights accompanying every Renfrew. Scales supplied in black or all nickel-plated finish. The

Renfrew

HOUSEHOLD SCALE

Capacity ½ oz. to 30 lbs.

Government Inspector's Certificate accompanies every scale.

Model D High Speed Heavy Duty MODERN TOOL GRINDER.

It's a Case of Love at First Sight

If this tool grinder is on display when the farmer comes in the chances are he'll buy it.

Here are one or two points that will impress him:
—the clamp holds it firm, eliminating vibration.
—it gives high speed, yet the gears are so compact it will go into a tool chest.
—it has a universal tool rest, thus providing means to sharpen various tools.

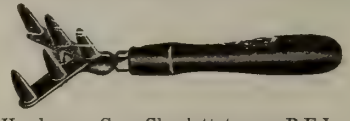
Gilson Weeder



Patented

There'll be patriotic satisfaction as well as profit in selling your customers Gilson Weeders. Gilson Weeders eliminate so much of the labor of weeding and cultivating as to encourage constant attention to the garden, with a resultant increase in production.

Gilson Weeders, and all Gilson Garden Tools have special features that appeal instantly to gardeners of both small and large spaces. They'll save time, save labor, and leave the ground in better condition than ordinary tools. The Gilson proposition is interesting from all standpoints. If your jobber cannot explain it to you write us direct.

To help you sell Gilson Garden Tools we are regularly using space in both Farmers' Magazine and MacLean's Magazine.

BUILD YOUR BUSINESS ON THE SURE FOUNDATION OF
STANDARD MERCHANDISE

IT pays to rely upon the staying-power and the selling-power of standard lines.

O-Cedar Products assure your customer of value, satisfaction and service.

Give your customers merchandise that represents the best in materials, and workmanship, and at the lowest price.

When you are asked for a Floor Mop, be able to say, "Yes, we have the O-Cedar Mop." If you are asked why you recommend it, point out how strongly it is made (all parts securely fastened and riveted) the fine grade of cotton fibre and drill used; how strongly it is sewn; the length and spread of the mop; the attractive lithographed container. But, above all, explain that it is treated with O-Cedar Polish, which is the big reason for its unique success.

Extra Service

The service to be gained from any rubber product depends largely upon the quality of the material and the excellence of the workmanship. That is why Dominion Rubber System products are outstanding. Only the best in material and workmanship is incorporated in the making of those products. That ensures long service and life and proves a matter of no little economy to the buyer.

Over half a century of continuous manufacturing has taught the Dominion Rubber System how to produce qualities that will "stand up" under any circumstance, and, as a result, the products that carry the name and brand of the Dominion Rubber System are looked upon as the standard by which to judge qualities and values throughout Canada.

For anything in Rubber, write to our nearest Branch, where prompt and intelligent attention will be given to all enquiries.

A Light Foot, A Nimble Mind and the Will To Do

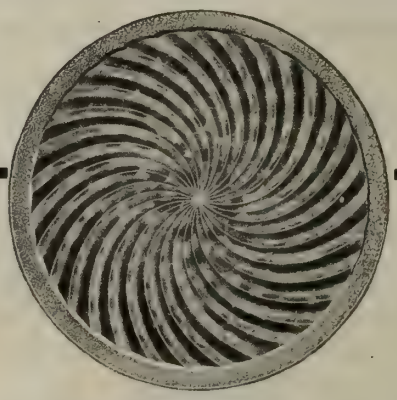
It is the unexpected which disturbs the world of business; this calls for rapid decisions, scrapping of old plans, making new ones on the spur of the moment, swinging the organization in back and giving her a full head of steam.

If business men had to do this once every year it would be of small consequence.

If original plans held good many more commercial houses would achieve success. But to-day this isn't the case.

It is the ability to change a carefully laid plan—change it in the heat of battle to meet some new contingency—this is the thing that wins in war or business.

Light on your feet, quick with your brain and willing with your hand—there you have it.



We believe in keeping fluid — we make every possible preparation, then we go at each new problem with an open mind, a loyal organization and the will to serve. It is no royal road we travel — we hew our pathway each and every day.

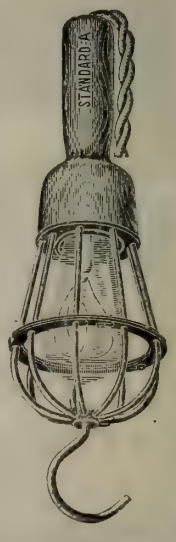
It is all done in order to serve our customers—if we can help them it is our pleasure—if we do help them it is our reward. And—

The reward piles higher each day, but far from taking it for granted as our right, we are working the harder to serve the better —and serving.

Miller-Morse Hardware Company, Limited

Winnipeg, Man.

There will be more new Motorists in Canada this Spring than ever before.



Every one of those new Motorists must conform to the Anti-Glare Headlight Laws.

"Dominion Lenz" satisfies both the Law and the Motorist

"Dominion Lenz" affords a simple, effective means of overcoming headlight glare and at the same time giving the motorist full light protection. It breaks up the direct rays of light from the reflector, projecting a soft, bright-as-day light well ahead on the road. It gives improved illumination without dazzling the eyes of approaching drivers and pedestrians.

A need in every Garage

Every garage in your town needs a Crescent Portable Lamp Guard. Protection for lamps and safety from fire is provided in most convenient form. Light and easy to handle, but very strong and substantial.
Ask for our "Loxon Leaflet." It describes a number of different Lamp Guards.

Dealers: This beautiful color ad. appears in MacLean's Magazine for April. Tear this ad. out and put it in your window as a reminder to your customers.

"My $100.00 Table—Saved"

"My beautiful dining-room table had been in storage several years and was in very bad condition—dull, dirty, marred, scratched. I had just about decided to sacrifice it to a junk-man. Then, suddenly, I remembered what wonderful results a friend of mine had obtained with

LIQUID VENEER

"A single application with a piece of cheese cloth worked wonders. The 'bluish' smokiness, the dirt, the mars and scratches vanished and my table was restored to me in all its original lustre, beauty and newness. I was truly amazed.

"Now I use Liquid Veneer throughout the house on all my furniture and woodwork. I *know* it will keep everything new-looking *twice as long*—will save the expense of buying new furniture and also that of having old pieces refinished."

You, too, can renew and restore, saving many dollars in refinishing costs. Send for our new booklet, "The Proper Care of Your Furniture" and learn the real secrets of furniture beauty. Sent FREE upon request.

Don't forget, Liquid Veneer sells at the same old prices, 25c and 50c a bottle.

Buffalo Specialty Co., 381 Ellicott St., Buffalo, N.Y.

Canada, Bridgeburg, Ontario

May we send you this "Cut-out"

THE above "cut-out," beautifully lithographed in nine colors, represents a garage equipped with Stanley Garage Hardware. With other automobile accessories grouped about it, this display will form a most effective window trim that cannot fail to attract the attention of automobile owners and garage builders.

It is made of heavy cardboard—can be adjusted in a moment.
The dimensions over all are 50 inches long by 36 inches high.
Because of the unusual value of this display, it will be sent only to those dealers who stock 10-inch and 24-inch Garage Hinges No. 1457 and the Stanley Garage Door Holder No. 1774. If you are not already selling these items, your request for a display should be accompanied by an order of reasonable size. In sending such an order, please give the name of the jobber through whom your Stanley Garage Hardware is to be shipped.

Send for this display today.

Stanley Garage Hardware is carried in stock by the leading builders' hardware dealers.

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 30 TORONTO, MARCH 23, 1918 No. 12

Our Thirtieth Annual Number

"ARE you going to issue a Spring Buying Number this year?" asked an Ontario hardware merchant, who visited HARDWARE AND METAL'S *office recently. This merchant's father was one of the first subscribers to* HARDWARE AND METAL. *When the father retired from business, his son, who had grown up in the business, took it over and is conducting it to-day. "I have in my possession," continued the merchant, several of your big buying numbers. I consult them frequently, because they are a guide and a directory combined. I not only find the editorial matter instructive and interesting, but I secure a great amount of valuable information from the advertising pages." This merchant is typical of hundreds of other successful hardware merchants doing business in Canada. We told the merchant that we were working on our Big Annual Spring Number and that it would be one of the biggest and best we had ever issued. This issue is* HARDWARE AND METAL'S *30th Annual Spring Number. Each spring for the past 30 years this Spring Buying Number has gone out to the trade. There are many hardware merchants in Canada who have been taking* HARDWARE AND METAL *since the first issue. There are scores who have received* HARDWARE AND METAL *regularly for upwards of 20 years, while many hundreds of merchants have been regular subscribers for 15 years or over. Over 90% of the Canadian hardware trade from coast to coast subscribes to* HARDWARE AND METAL. *We believe our success in securing as a subscriber to* HARDWARE AND METAL *practically every worth-while hardware buyer in Canada is due to the fact that we have endeavored during all these years to give the trade the best possible service.*

Interior view of left side of May Brothers' Store, West Toronto. Note the Silent salesmen in which various lines such as shaving equipment, mechanics' tools and other lines are featured. In wall show cases will be noted displays of mechanics' tools and builders' hardware, and many other lines of hardware.

THE store of May Brothers at West Toronto has been equipped after a great deal of thought and study on the part of the proprietors. The ideas which they have embodied in their store have been gleaned from many sources. George E. May, proprietor of the firm, took the time and trouble to make a trip to several of the large cities of the United States in order to see what other stores had in the way of equipment. Mr. May has also been a reader of HARDWARE AND METAL *for many years and is frank to say that some of the ideas which he has embodied in his store were the result of descriptions of other stores which have appeared in these columns from time to time. But these hints from various sources have been but factors which have helped May Brothers to form their own composite idea of what interior store arrangement should be. They have worked out their own ideas and have obtained something distinct and original.*

Store Equipment One of Bi

May Brothers of West Toronto Have Recently Moved In ness-Pulling Power of Fixtures and Store Displa Cases—Makes the Customers Feel Th After Considerable Time a

THERE is absolutely no question but that a fine display creates trade. It is just as sure to attract trade as the handing out of gold dollars free of charge would attract a crowd. People sometimes think that I carry the idea of fixtures to an extreme. But in my opinion they are just as essential in the winning of trade as bread is essential to the making of a meal." The above sentiments expressed by George E. May, of May Brothers, to a representative of HARDWARE AND METAL, give the impelling motive that recently led Mr. May to move into new premises and equip his store in such a way that it is now one of the best and most complete retail hardware stores to be found in the Dominion.

The store of May Brothers is located in West Toronto, on the south side of Dundas Street, in one of the busy manufacturing districts of the city. May Brothers have been in business in West Toronto for twelve years, eleven of which were spent in their location on the north side of Dundas Street nearly opposite their present location. May Brothers have been developing along the lines of a specialty hardware store. In other words, they have found out the lines which pay them best and are confining their attention to those lines.

Comes of Hardware Family.

George E. May, the proprietor of May Brothers, comes of a hardware family. His home town was formerly in Creemore, Ontario, where he learned the hardware business in his father's store, and where his father, W. A. May, is still engaged in the hardware business. Twelve years ago he started in business with his brother, Harris B. May, in West Toronto. Some two years later H. B. May withdrew from the company and is now located at Indian Head. George E. May has continued the business under the firm name of May Brothers. While Mr. May had his training in the hardware business in a small town where the trade was largely with the farming community, he preferred the larger city because the nature of the business was somewhat different.

When Mr. May decided some time ago to change the location of his business, he

Interior view or May Brothers' Store, West Toronto, showing right side. Observe the prominence given to mechanics' tools in silent salesman and the neat arrangement of goods on shelves and in drawers The paint department is also shown in this photograph.

actors in Getting Business

ine New Stor and Have Given Much Consideration to Busi- -Carries Large Stock of Tools—Attractive Display is Their Store — Equipment Selected hought Given to The Matter

secured a store almost opposite the location in which he had done business for eleven years.

Mr. May decided to make his store one of the most attractive and incidentally one of the most practical in the Dominion. He had one big idea in view, and that was to give his customers the best possible service at the least possible expense and without waste of time on the part of his sales staff or on the part of customers.

The store is located at the busy intersection, where practically three lines of street railways meet, and not only enjoys a large share of regular business, but secures a very considerable amount of transient trade.

Mr. May has always been a keen observer of the business methods of other merchants, and has frequently made visits to various parts of the country so as to secure ideas which he could adopt in his own business. Mr. May is also a reader of trade newspapers and has made it a practice to visit hardware conventions and to attend meetings where he could secure ideas regarding better methods of conducting a retail business.

It is therefore only to be expected that in the new store of May Bros. the many practical innovations are not merely those arrived at by snap judgment but are the culmination of a search for information and ideas covering a period of years.

Mr. May believes that in conducting a city store service is as big a factor as price in conducting a successful retail hardware business.

It therefore follows that the splendid quarter cut oak fixtures have not been installed for appearance alone, but for the purpose of displaying goods to advantage and in such a manner that they are easily viewed by the customer and easily accessible to the sales staff. The new store has been departmentized and the arrangement of goods has been planned in a careful manner in order to give each department the prominence which it deserves.

Splendid Interior Appearance

On entering May Bros.' new store the visitor is impressed by the attractive appearance of the store interior, the neatness of the displays and the provision which has been made for the ease and convenience of customers.

STORE frontage in West Toronto is valuable and May Brothers made a study of the best way to utilize space in order that the store might not have a cluttered appearance. The dimensions of the store are 20 feet in width by 100 feet in length. Examination of the illustrations will show how admirably they have succeeded. Silent salesmen, wall show cases, neat arrangement of goods on shelves, drawers for the smaller articles, each of which is labeled. "A place for everything and everything in its place" might well be applied as one of the mottoes of this firm. Neatness thus secured is one of the big factors that has assisted in the economical distribution of their space. It is also a factor that helps to make their interior displays stand out and catch the eye of the customer. May Brothers consider this matter of interior store arrangement one of the cardinal points in helping to win trade.

The visitor must have been favorably impressed before entering the store because the windows as shown in one of the accompanying photographs are models of neatness and attractiveness.

May Brothers depend to a great extent on their window displays for their advertising to reach the public of West Toronto. Their store was equipped with fine big display windows with this in view. They are 16 feet in length, extending back from the street front for that distance on either side of the entrance. The entrance-way is wide and tapers toward the doorway. The floor of these windows is built of bird's-eye maple with a cherry-wood border, which makes a most attractive background for the articles. In the evening the windows are lighted with powerful electric lights, the amount of the power which it is possible to turn on the two windows being 3,000 watts. The store in itself is excellently lighted with the indirect method and the total of the lighting power is 1,600 watts from the store ceiling. Some comparison of the lighting power in the windows can be had when it is realized that in the two windows the amount of light that can be turned on is almost twice as great as that of the entire store in the rear. The recent order preventing the lighting of store windows has, however, restricted the use of the light in the evening.

To say that these display windows are one of the features of May Brothers' store is putting it mildly indeed. They are more than a feature; they are an advertising medium—a trade puller.

Mr. May states that some of the best results secured in the way of sales are in direct returns from window displays.

Carry Large Stock of Tools

May Bros. carry an exceptionally large stock of machinists' tools, cutlery, carpenter's tools, shaving supplies, electrical appliances, and many other of the smaller lines of special hardware for which there is a constant need and a ready sale.

The special tool window displays and also the special window displays of cutlery which appear from time to time in May Bros.' store are among the best in the Dominion.

Each window display is carefully planned and a suitable background is prepared in each case for the displays.

It is not uncommon to make sales as a result of these window displays several weeks after the window display has been removed.

Customers very frequently come into the store and ask for goods which they have seen displayed in these windows many weeks previous.

Occasionally special displays are featured showing largely one line of goods. For instance, on one occasion a special alarm clock window was arranged and on another occasion a special window display featured vacuum bottles almost entirely.

In each of these cases prices were quoted on each line and a great many direct sales were made. It turned out, however, that for several weeks after these displays had been in the window customers came in repeatedly asking for the lines which they claimed they had noticed in the window some weeks before.

Store With a Slogan

The front of the May Bros.' store, including the show window, is well covered with signs as shown in the accompanying photograph.

The main sign above the store entrance gives the name of the company in large gold letters. The name also appears in the tiled entrance and also on the windows themselves. A most attractive design is shown on each of the windows and can be noted in the accompanying photograph with the store slogan, "It pays to deal at May's."

This is a slogan which is carried out

GEORGE E. MAY
Proprietor of May Brothers' Hardware, West Toronto.

in a number of ways in connection with the store's advertising.

Store Arrangement Complete.

A careful study of economical store arrangement has been made by May Brothers. The dimensions of their store is 20 feet in width by 100 feet in length. George E. May took the time and the trouble to make a trip to various cities of the United States before making his selection of fixtures and before deciding upon the arrangement of his store interior. The example of May Brothers is evidence of what can be done in the way of utilization of every available bit of space. There is a proper place for everything. And everything is kept in its place.

A Service Counter

Right on entering the store is a service counter provided for the convenience of customers. This counter does not take up a great deal of room but nevertheless it is greatly used by customers. It is provided with a city directory, telephone directory and telephone. The fame of this service counter has spread all through the business section surrounding May Bros.' store and it is not only used by the hundreds of customers who use May Bros.' store but certain other persons looking for information are frequently sent to May Bros.' store by merchants who sell other lines but who are not in a position to give information such as is available at this service counter.

A portion of this counter with telephone and directory is shown in one of the accompanying photographs.

When the public comes in to use this service counter the whole store stands out before them in the form of a vast and well arranged display of hardware which is bound to create a lasting impression.

Two attractive silent salesmen are located immediately inside the main store entrance and are shown in the accompanying photograph. At the time these photographs were taken one of the silent salesmen contained a most attractive display of tools, while the other was devoted to a display of razors, shaving supplies, cutlery, etc. The silent salesmen and counters in May Bros.' store are most attractive indeed and are fitted with marble bases.

Immediately behind these silent salesmen are two attractive wall cases enclosed behind glass doors and containing displays of goods for which there is a need in the average home.

Paint Department

Next in order on the right-hand side is the display of paints. There is a large stock of paints kept on the shelves the year round. "Paint sells all the year round with us," said Mr. May. "And it sells because we keep it prominently before the people." Below the paint shelves are the drawers for keeping the paint brushes. About midway in the paint display is a sample case of all the various styles of paint brushes. This display of brushes is kept permanently under glass. It is an easy matter for the customer to pick out the style of brush that he would like. As soon as his selection is made the brush can be obtained from the stock drawers. These drawers are all labeled, each drawer carrying only one kind of brush. The brushes range in price all the way from 5c up to the expensive kalsomine brushes. The brush display in the glass panel is on a swing door, behind which are small shelves for color cards and other advertising matter supplied by the paint manufacturers. On the back of the brush panel is tacked some instructions to guide the clerks in the selling of paint. The display of paint and brushes is very complete.

Kitchenware Section Next.

On the right-hand side of the store following the paint display comes the arrangement of kitchen ware, comprising such things as cleaners, stove polish, enamelware, aluminum pots and kettles. In the centre of this kitchen-

One of the features of May Brothers' store at West Toronto is the magnificent windows. These windows are 16 *feet in depth and extend for that distance on either side of the entrance way. The flooring of the windows is of bird's-eye maple with a border of cherry wood. This makes a fine background for display. On the wall of window interior an attractive rural scene is painted. It will be noted that mechanics' tools and cutlery are given prominence in the lettering on the windows. Standing out prominently is the slogan of the firm: "It Pays to Deal at May's." This is painted in bold lettering in an oval.*

ware display is a sample case containing such articles as large kitchen spoons, egg beaters, parers, knives. The drawers underneath contain all sorts of articles such as those generally carried in the average hardware store, comprising fly swatters, sponges, flue stoppers, mop cloths, string mops, stovepipe wire, enamel cups, pipe dampers, funnels, enamel mugs, soap dishes, lemon squeezers, coat hangers, graters, patty pans, towel rollers, cake cutters, sink cleaners, asbestos mats, potato pressers, cake turners, rolling pins, oilers, potato mashers. Nearest the floor the space is divided into sections and the articles are concealed by little hinged doors fastened with cabinet catches. These shelves are given up to the larger articles such as pot covers, chair seats, drying pans, dust pans, ash shovels, shoe lasts, lamp glasses, clothes line pulleys, roller skates. May Brothers have effectually solved the method whereby so much of the bulky stuff in a hardware store can be kept in a neat arrangement. It is this class of stuff which usually gives a hardware store that cluttered appearance which is not uncommon. There is a drawer for each of these articles. Each drawer or shelf carries a neatly printed label in letters large enough to be discerned without the necessity of having to put on "specs" to read it.

Attractive Display Cases at Sides.

One of the features of the store in the rear section is the display cases at either side and in the rear. The display cases at the sides are located about three-quarters of the distance from the front of the store and are of the narrow pillar-type. They extend upward to the height of some eight or nine feet and are equipped with a light at the top, which throws a brilliance on the display below. A little touch of richness is added through the brown drapery that depends from the top of the case One of the cases is given up to the display of gas mantles, globes and similar lines of gas lighting accessories. These show cases coming, as they do, about three-quarters of the distance from the front of the store, have the appearance of forming a pillar and so cause a break in the otherwise straight sweep of the store. The lighting system and the draperies give them a very attractive appearance and help brighten the interior of the store—a part which is so often neglected in the lighting arrangement.

Display Under Glass in Rear.

Following out the idea of lighted display cases to add to the brightness and attractiveness of the store interior May Brothers have had erected a show case which extends almost the entire width of the store at the rear, with the exception of two doorways—one to the basement at the right and one to the office at the left. This display case is equipped with the indirect lighting system and has the rich brown colored drapings, in width about twelve inches, hanging from the interior of the case at the top. This case at the time the visit was made to the store carried a display of aluminumware. Over the top of the case are some large letters directing attention to the display. It is the policy of May Brothers to change the display in this case from time to time. When the display is changed the lettered cards can also be changed. This is a novel feature of the May Brothers store and effectually banishes a dark interior.

Bolts, Screws and Nuts in Rear.

On the left-hand side at the rear are the drawers containing such commodities as bolts, screws and nuts. These are all arranged in drawers according to the various sizes, with neat labels for pipe fittings, carriage bolts, coach screws, machine bolts and various other kinds. The excellent lighting at the rear of the store permits of these articles being shown to excellent advantage when the customer is requested to step to that section of the store.

On the left-hand side of the store, about three-quarters of the distance

from the front, is the display of carpenters' tools and builders' hardware. Samples of these various lines are carried in cases under glass, while the goods themselves are in the original containers on shelves at the back of the displayed samples. The counter for this section carries a covering of corrugated rubber matting. This matting protects the surface of the counter and makes the handling of the goods noiseless. As will be observed by reference to the photograph of that section of the store, pails are kept on the top shelving, neatly piled, and are reached by the aid of the store sliding ladder.

Big Sale for Machinists' Tools.

West Toronto is a manufacturing district and there is naturally a big opportunity for the sale of various kinds of machinists' tools. May Brothers give these lines extra prominence by placing them well to the front part of their store. A silent salesman carries a display of machinists' tools such as calipers, micrometers, surface gauges, ivory dividers, rules, punches, squares and similar lines. The mechanics have been made to feel that they are just as welcome as the most aristocratic buyer. May Brothers have given them to understand that they appreciate their custom and for that reason always try to have a complete stock, in order to supply on short notice, all the needs of machinists.

Special Cabinets for Quick Service

One of the interesting features in connection with May Bros.' displays and stocks of tools, cutlery, etc., is the extensive and complete cabinet arrangement for such lines as chisels, files, drills, butcher knives, etc.

These cabinets are all fitted with special compartments for various sizes of chisels, files, etc., and in this way no time is lost in selecting the size or kind required by a customer.

Where several sizes of a line of goods are jumbled up or mixed in together there is always a considerable amount of time lost on the part of both dealer and customer in finding the desired size.

There is a special compartment provided for each size and style of a chisel, file or any other one of the dozens of lines which are carried in the hardware store and there is no loss of time in serving a customer. There is also the elimination of the danger of clerks stating that a certain size is out of stock when, as a matter of fact it might be mixed up along with other sizes and thus a sale would be lost.

A great deal of time is also saved in stock-taking when the size and style is in a separate compartment as the stock-keeper can tell at a glance just how the stock stands and exactly how many are on hand of each size or style.

This is a most attractive feature, as it saves a great deal of time not only for customers but also for the buyer and for travelers when taking orders.

This plan is also followed out in connection with drills of various kinds and with a great many other lines.

Portion of office of May Brothers, showing manager's desk and bookkeepers' desk, together with invoice cabinet. The office is on a mezzanine floor and overlooks the store.

The same is applicable to many cutlery lines, for instance, butcher knives, special drawers are provided for sizes such as 12-inch, 8-inch, 6½-inch, and so on right down the line.

All drawers and compartments are labeled with the name of article and also details regarding size, price, etc.

Rear of Store is Attractive

One of the most commendable features of May Bros.' new store is the attractiveness of the rear of the main store interior. One of the accompanying photographs shows this department of the store which is almost as attractive as the main entrance.

By consulting this photograph the reader will note that the special counter is available with two scales for weighing nails and other lines of bulk goods.

Back of this counter is shown a great many lines of hardware such as butts, cabinet locks, padlocks, drawer pulls, cabinet hardware, hat and coat hooks, shelf brackets, snaps, hooks and eyes, and dozens of other small lines of shelf. goods.

These lines are all attractively displayed on sample boards behind glass doors which swing outwards, and they make a most unusually attractive display.

A stock of these lines is located on shelves behind the sample boards and is easily accessible to the salesmen.

The reader will also note in this photograph a display of aluminum ware in a glass case referred to previously in this article.

The office is also shown in this photograph as well as the two side wall cases previously referred to.

Tables for Clearing Lines.

This concern believes in the value of keeping goods turning. It is not good business to have commodities remain on the shelves for a whole year. The greater number of times they are made to turn the more there is in it for the dealer. To this end May Brothers are following the idea of tables for special lines which may be placed on sale. At the time HARDWARE AND METAL'S representative visited their store they had on sale certain sizes of paint in cans. They took occasion to clear out some of the pint sizes which they had in stock and which the manufacturers recently decided to discontinue. Scrub brushes was another line on which there was a sales drive. At the time the photos accompanying this article were taken this concern was making a bid for the oil heater trade. With the coming of milder weather and the dwindling of demand they cleared the floor and made room for other lines.

Displays Are Changed Around.

May Brothers believe in changing the appearance of their store interior by changing the displays around. For instance, at the time the photos accompanying this article were taken the alarm clocks were on the left-hand side of the store and the vacuum bottles were on the right-hand side, while a short time later their positions were changed. The displays of paints and kitchenware are kept permanently in one section of the store. This changing of the displays in the interior of the store gives an attractiveness the same as the changing of the store windows.

Sell Lines That Pay

May Bros. have been developing along the lines of a specialty hardware store. "We have been endeavoring to eliminate the lines which we find are not profitable to handle," said Mr. May. "We have succeeded in eliminating a great many lines which took up a great deal of space

but on which there is not a fair margin of profit. On the other hand we have constantly added to our stock those lines which we could sell to our customers and on which we could make a rapid turnover at a fair margin of profit. We feature these lines prominently in our display cases and in our show window and in other ways, and in this way we have doubled and trebled our sales on many profitable lines on which we can make a rapid turnover on a small investment."

This does not mean that May Bros. have a small stock for their stock is a large one. It is a most unusual stock and one which is composed largely of lines which are turned rapidly with a comparatively small consequent loss as a result of slow moving lines.

May Bros.' store and stock is one instance of where, by making a careful study of the best lines to handle, a merchant can eliminate a great deal of loss which is sometimes created in business by heavy stocks of slow moving lines.

The Paint Department

May Bros. have worked up a large trade in paints, including inside and outside paints, wall colors, floor paints, and various kinds of floor finishes, varnish and oil stains, floor wax, and many sundry lines which comprise a complete stock of the finishes which are necessary in a complete paint department.

It is the claim of May Bros. that when a customer visits their store asking for information for goods to be used in connection with paints or varnishes in the home, that the wants of these customers can be supplied quickly.

A close study has been made by Mr. May and by his sales staff of the many important matters with which a successful salesman should be familiar in selling to this class of trade.

The paint department of May Bros.' store as shown in one of the accompanying photographs, occupies a most prominent location and is shown here the year around.

May Bros. not only have an exceptionally large paint and varnish trade during the big paint selling season, but through their efforts during the years they have been in business they have made paints and varnishes an all year around seller with the result that there is a constant demand for it the year around.

A great many of May Bros.' customers have been educated to understand that they can do a very considerable amount of painting and varnishing or refinishing in their own home in the cold weather just as in the spring and summer.

Special paint displays are frequently featured in the show windows, and many of the paint sundry lines receive attention in silent salesmen displays.

It is not uncommon to visit May Bros.' store and find in one of their attractive silent salesmen a splendid display of sundry lines such as gold bronze, enamels, stains, and the many smaller lines for which there is a ready sale if the goods are properly displayed and explained to the public.

Stock Room in Basement.

The stock room in the basement is neatly and conveniently arranged. The rear compartment has sections for iron pipe, building paper and stovepipes and elbows. Building paper and roofing can be compactly stored by reason of shelving which permits a second tier to be placed above the first tier on the basement floor.

The centre compartment of the basement is given up to such lines as glass, sash weights, spades, shovels. All glass cutting is done in this compartment on a table specially built for that purpose. In the front compartment there is storage space for the various lines of stock carried upstairs. There is perfect accessibility to every part of the stock room by reason of the arrangement in aisles with shelving to carry the stock. There are numerous lights which make it easy to obtain goods from every section of the stock room.

Store Equipment

May Bros. have not only equipped their store with the most modern show windows, silent salesmen, wall fixtures, etc., but they have paid a great deal of attention to the smaller details which are very important but which are sometimes overlooked.

The store interior, such as the walls, ceilings, etc., is decorated in a manner which harmonizes with the store equipment. The store is well lighted with modern fixtures, a modern cash register is used for cash transactions, store ladders on both sides have been provided for reaching the shelves which are not accessible at arm's length.

Another feature is a place for testing tungsten lamps in order that the customer may see that the lamps are in good condition when they are purchased.

(Continued on page 116.)

Rear section of store of May Brothers, West Toronto, showing the location of the office, the pillar-like showcases at either side, the large showcase in the rear. These showcases are well lighted and have rich colored brown silk drapings. Counter in foreground is covered with corrugated rubber matting to protect the counter and cause less noise in handling goods. Builders' hardware is arranged on shelves, behind display cases which contain samples of various articles.

Ad Writing and Designing Not Difficult

Illustrations Very Valuable to Tell a Story—Put News Into Your Advertisements—Study of Few Type Faces Will Help—Should Learn to Prepare "Dummy" or "Layout"—Number of Words to Square Inch—Advertising a Big Subject

By John C. Kirkwood

THE average retailer isn't very strong on advertisement-writing. This isn't his line. And so the retailer dodges the preparation of advertisements. Some retailers, on the other hand, take keen pleasure in the preparation of advertisements. Both the man who dislikes and the man who likes preparing an advertisement are advised to use illustrations to take the place of words.

Illustrations attract the eye. By their contrast with reading matter they pull the eye to them. So from his point of view they have a very real value. But the right kind of illustrations are suggestive of merchandise.

Avoid Foolish Illustrations

It may be a hammer that is shown, or a lantern, or a brush, or a piece of fur, or a hand bag, or a man wearing a flaring necktie. Whatever the illustration may be, it probably speaks swiftly to many persons and gets their attention.

Just here it is to be said that foolish illustrations in an advertisement distract the attention, and so defeat the purpose they are intended to serve. One frequently sees humorous illustrations in country weekly newspapers, used by jewellers, boot and shoe dealers, hardware dealers, and other classes of retailers. Looked at critically they are really out of joint as a rule, with the text or message of the advertisement. The effort to relate text and illustration is clearly a forced and unhappy one. Illustrations of this sort can be left alone with advantage.

Illustrations Are Easy to Get

Illustrations of the right kind can be had very often for nothing—from manufacturers. The great majority of manufacturers delight to supply retailers with electros. Not always, however, do manufacturers provide retailers with the electros of desired size and character. But if the retailer puts up to the manufacturer the right kind of request, for the right thing, the manufacturer will probably meet the retailer's wishes.

Speaking on this point of how illustrations of the right sort can be obtained, it is once more to be pointed out that HARDWARE AND METAL supplies electros of some hundreds of articles of common things stocked by hardware dealers. These electros are sold at 20c each. Sheets showing them all are sent free to all applying for them. Address request to HARDWARE AND METAL, 143-153 University Avenue, Toronto. Scores of retailers all over Canada have bought these electros and use them, with excellent results, week after week.

News Advertisements Recommended

The best type of advertisement for the hardware dealer is a straight news advertisement—one that gives real news about goods and the store's service. This

JOHN C. KIRKWOOD.

is the simplest and easiest advertisement to write. Readers—that is prospective buyers—want just plain news, as a rule. Very few readers want or will give time to fancy writing, or to empty gush, or to bald generalities. Nor do they want to be entertained. On the contrary, they want the advertisements they read and to which their attention is invited to be simple, straightforward statements of fact—descriptions of or particulars about the goods, or their uses or value.

The average reader of a newspaper reads it in more or less of a hurry, because there is something else waiting to be done. For this reason, it is wise to make advertisements meaty and crisp—this by giving real and desired information about goods advertised. This information should if possible be related to an illustration.

Study Mail-Order Catalogues

If one wants to know what to say about goods, one will find an admirable aid in the mail-order catalogues of the big department stores. In these catalogues descriptions of goods are terse, adequate and without any superlatives. The aim is to economize words. Every word means space and cost. So there is an object in cutting down descriptions of goods to the brevity of telegrams. Now, if the retailer will let himself be guided, in the preparation of his advertising by the mail-order catalogues he will be producing good advertisements.

Typography Is Important

The advertisements of the big department stores which appear in metropolitan dailies can very profitably be studied not only for their style and language, but for their "display" or composition. The retailer can be sure of this fact: Good ad-compositors and good ad-designers are responsible for the superior adsetting of department store announcements.

Here is a practical suggestion: When you see in an Eaton, or Simpson, or Hudson Bay Company, or Goodwin advertisement a style of setting pleasing to you, cut out the particular part you like, and give it to your printer—the man who will set up your advertisement—and ask him to follow as faithfully as possible the style of the clipping given him. Thus you will be getting nearer and nearer all the time to better typographical effects. And your local compositor, when it is put up to him to reproduce as faithfully as possible good, well-designed, and well-set compositions, will himself go to school, as it were, and will eventually give you something quite fit to be placed alongside the ad-compositions one sees in the metropolitan dailies.

Many retailers do not know much about the designing of advertisements or good ad. composition. This is something, often beyond their comprehension. One reason for this lack of knowledge is that their attention is never or but rarely directed to this aspect of advertising. Another reason is that their printer—the man who sets up the advertisements—is often quite as lacking in a knowledge of what constitutes good typography as is the retailer. Yet well-set advertisements go far towards making advertising resultful; and since this is so, it is clearly a matter that should concern the retailer who buys newspaper space to point therein his business news.

Some Revealing Re-set Advertisements

These observations will be made clearer by a study of the re-set examples in the engraving accompanying. A close examination of the original setting and the re-set advertisement will surely show the retailer how much better the re-set

This advertisement of Taylor Bros., Ltd., Carleton Place, Ont., is reproduced to show how this firm uses illustrations to give attractiveness, punch and persuasion to its advertising. The copy or text of some portions of this advertisement is deficient in news material. At the same time the advertisement as a whole is commendable.

compositions are than the originals. The original compositions are what one very often sees in country newspapers. There is a disposition to use fancy and many display faces, and sometimes ornaments, and to do freak composition. By contrast the re-set advertisements are the acme of simplicity and chastity, and have an attractiveness, pleasingness and persuasiveness not possessed by originals. These examples, and the notice pertaining to them (found on the engraving), merit very close study.

Preparing the Dummy or Layout

Another engraving is shown to illustrate how to "lay out" or design an advertisement for sending to the printer. A little practice and study will soon enable any intelligent man to do very good work. Just here it is to be said that many ad-writers write or print, in small type, the text or "copy" of the advertisement—this is their design. Far simpler, better and kinder is it to write out the text or copy of the advertisement separately, with typewriter or in long hand, and to mark its various divisions "a," "b," "c," etc., to correspond with the divisions of the "layout." Then pin layout and copy together, and send to the printer. The printer can see at a glance just how you want your advertisement to appear, and he can calculate the size of type to use from the number of words in your copy, and the space you have assigned them in your "dummy" or "layout." Memo: Make your layout or "dummy" the exact size of the space your advertisement is to occupy. Then both you and the printer will be able to see just what your desire is in the matter of disposition of copy, size of "body" and "display" type, white space effects, and so on.

The engraving is provided to show how to lay out or design an advertisement for sending to the printer. In this "layout" or "dummy" no provision is made for the inclusion of "cuts" or illustrations. The idea is to indicate to the untutored ad-writer a better way of preparing his dummy or design than the way practised by some, which is to write or print in, on the dummy, the text or copy of the advertisement. See note on this subject in the accompanying article.

About Type and Its Sizes

It is to be remembered that type is rigid, not elastic. Which means that just so many words of a certain size of type can be put into a square inch. It may interest some ad-writers in retail stores to know how the printer "sizes up" the ad-writer's copy—to know what size of type to use for setting it up.

The ad-compositor measures the space in the dummy or layout which the ad-writer has indicated "a," "b," "c," etc., corresponding to similarly-marked sections of the "copy" or text of the advertisement. Then he counts the words in the "copy." Then he makes his calculation, thus ascertaining that the copy will require to go in 6-point, 8-point, 10-point, 12-point, 18-point, etc. With this knowledge possessed, the printer can go ahead safely—that is, if the ad-writer has been reasonably precise in measuring his copy and the divisions of his layout.

By 6-point, 8-point, etc., as applied to type is meant the number of lines that make an inch in depth. There are 72 points in an inch. So copy set in 6-point will have 12 count-lines to the inch. To get an interesting illustration of what is signified by points, go to your Bell Telephone book. There the numbers and names are set in 6-point black face (12 lines to the inch); and residence or occupation, and street address, in 6-point light face type. Offhand, one would say that the black face type is the larger. Technically it is identical in size with the light face type—both are 6-point.

Words in Square Inch

Now, with this understanding of how type sizes are indicated, the following calculations will be interesting to the untutored ad-writer.

WORDS TO THE SQUARE INCH

Square inches	—Sizes of Type— 6-point	8-point	10-point	12-point
1	47	32	21	14
2	94	64	42	28
6	282	192	126	84

The ad-writer himself should be careful to provide approximately the right number of words to occupy the space allowed in his dummy or layout in the desired size of type face.

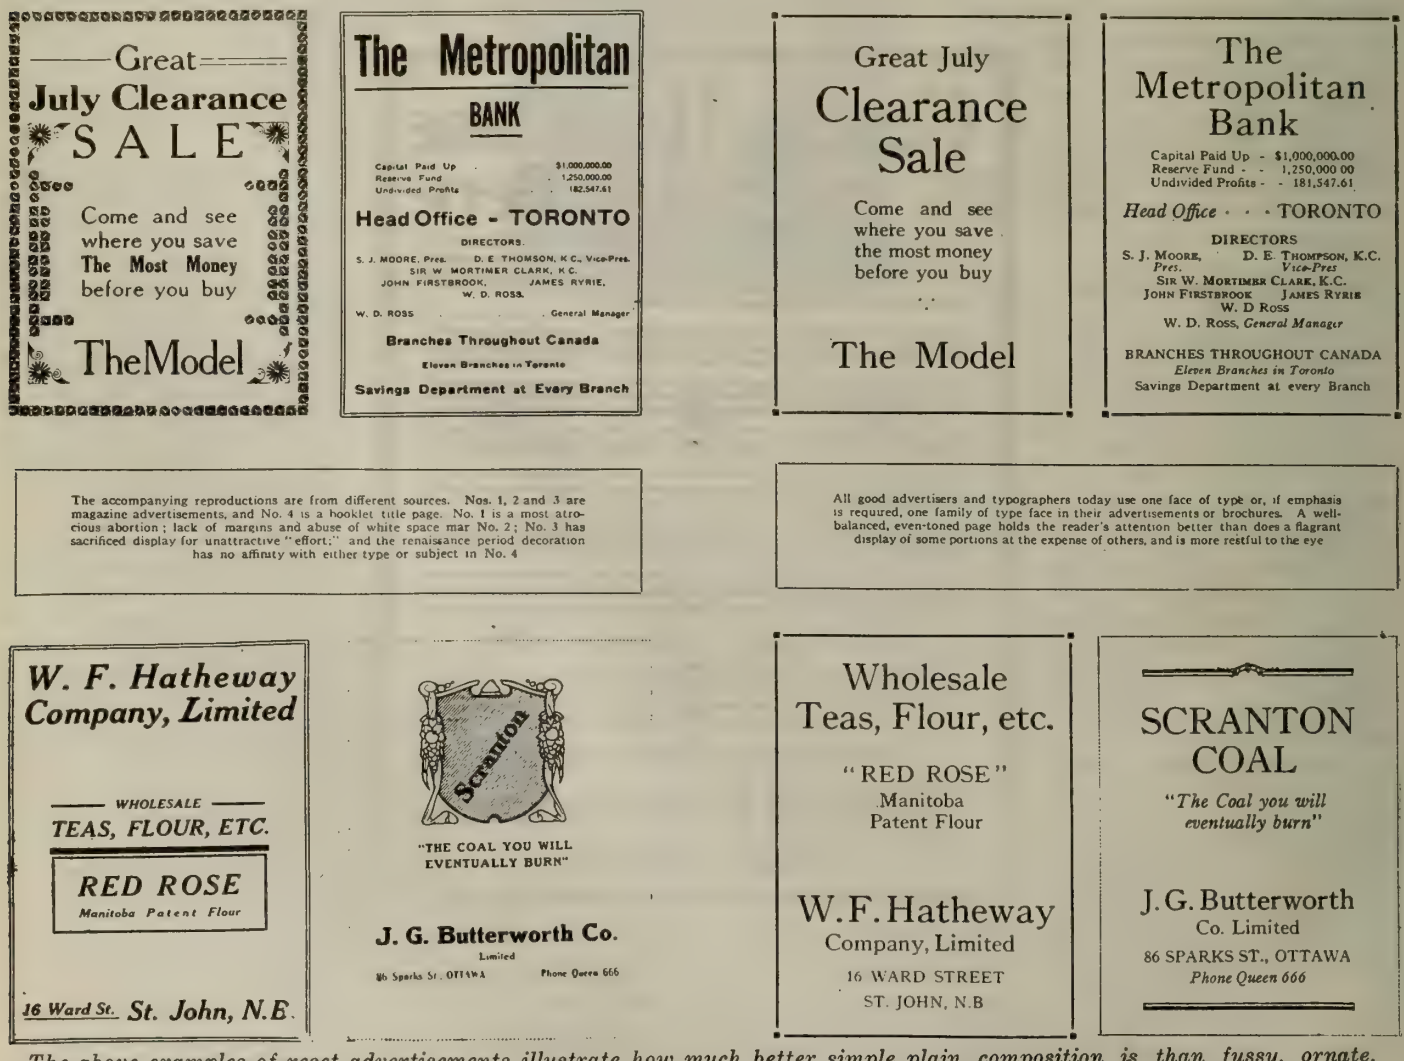
The foregoing is semi-technical, yet it is something that the ad-writer who is trying to do good work should know. If any man wants to know more about this and other phases of advertisement construction he can buy books on the subject.

Summing It All Up

This contribution to HARDWARE AND METAL started out with the suggestion that illustrations be used to make advertisements more attractive and interesting, and to give them added selling value.

Then it went on to state that simple news about goods or service makes the best-liked kind of advertising. Then followed something about advertisement-composition. The thought is: The preparation of advertising is a simple enough thing. No mystery or difficulties surround the writing and designing of an advertisement. There are some—nay, many—things to be learned, and as one goes far in his studies and practice, one will be acquiring new and highly interesting and useful knowledge about advertisement writing and designing, and about the functions of advertising. Just now, however, we are concerned with some basic, A B C things, readily comprehensible and really very useful. One must always begin at the beginning—build on foundations or bases, and it may be that for some readers of HARDWARE AND METAL what has here been written and presented will be of the nature of useful and desired basic material.

PRODUCTION OF PIG IRON FROM IRON SAND IN NEW ZEALAND



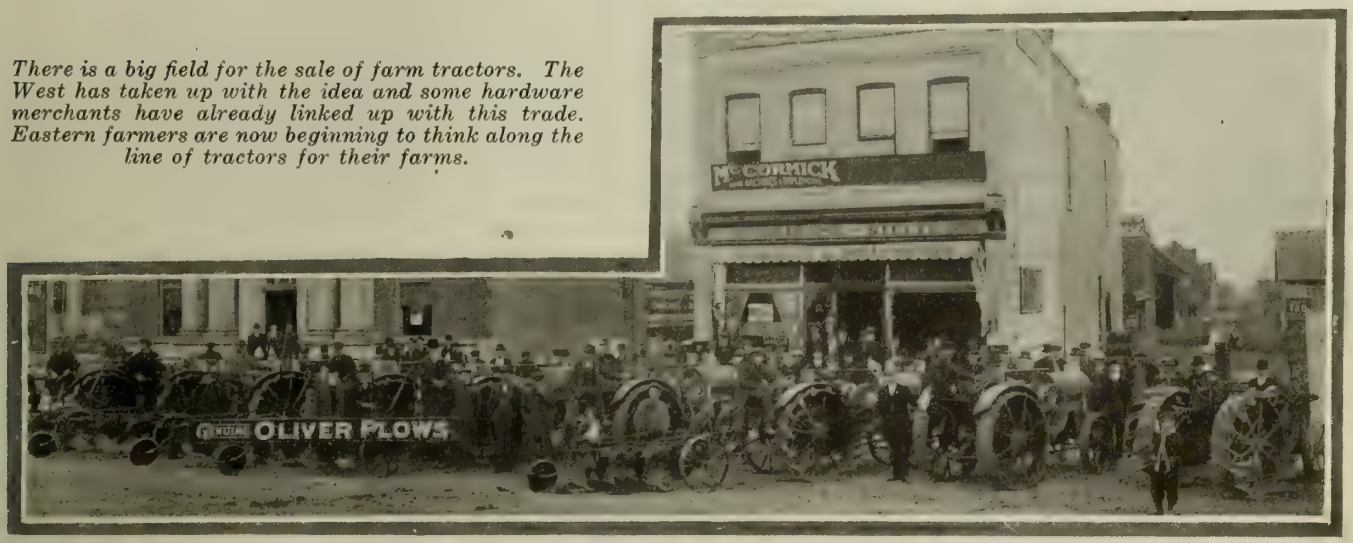
Relative to iron deposits in New Zealand, it is reported that the development of this industry has reached the stage where iron has actually been produced at the rate of 15 tone per day from the iron sand found in the neighborhood of New Plymouth.

It is stated that the iron is of a high quality, of a gray color, and easily workable. The present furnace, although not a large one, seems to be working very satisfactorily, and is efficiently arranged. The slag runs very freely, and the consumption of fuel seems to be very economical.

Now that it seems to have been demonstrated that high-grade pig iron can be produced from iron sand, it is proposed to further develop the plant, with the idea of manufacturing coke and the other necessary ingredients in sufficient quantities to keep the furnace going steadily so as to produce a large portion of the pig iron necessary for the country.

IRON ORE SHIPPING

Authorities say that mines in the Lake Superior district will be in a position to produce and ship 70,000,000 tons of iron ore during the 1918 season. This would compare with a high record of 64,734,198 tons of ore shipped in the 1916 season.



The above examples of reset advertisements illustrate how much better simple plain composition is than fussy, ornate, freaky treatments. The resets are by one of Canada's best typographers, Joe W. Short, with the Mortimer Company, Ottawa. Read his notes on the engraved plate.

Twenty Years of Continued Expansion

Hardware the First Venture—Machinery is Added—One Sale of Fifteen Tractors —Automobiles Sell Well—Big Sale of Accessories—Now Conduct Two Stores

There is a big field for the sale of farm tractors. The West has taken up with the idea and some hardware merchants have already linked up with this trade. Eastern farmers are now beginning to think along the line of tractors for their farms.

Above illustration gives an indication of the volume of business which has resulted to the Sutherland-Steck Hardware and Implement Company, Limited, of Dauphin, Man. Fifteen tractors were delivered at one time. The sale of tractors also led to the sale of many plows. During cutting time the tractors are used to haul two or more binders.

TWENTY years continuously occupied in building a hardware business in Western Canada is some achievement, particularly when it reaches the proportions of that conducted in Dauphin, Manitoba, by the Sutherland-Steck Hardware and Implement Company, Limited. And when the fruits of the labor and toil such an achievement demands are realized, as in this instance they decidedly are, the pride of the principals in such an undertaking is justified, fully enjoyed, and can be understood.

Hardware Their First Venture.

For many years this firm were following the prosecution of the shelf and heavy hardware business only. In this they were always alive to the interests of their clients, affording an increasingly comprehensive stock of new and ueful designs as available through an ever increasing variety of manufactured hardware.

But in this age of phenomenal advancement in the hardware trade—as in so many others—Messrs. Sutherland and Steck realized that to keep their ideals fresh and their clientele a growing, live and interested one new departures in merchandizing must be made.

Machinery Is Added.

In a community such as Dauphin—purely agricultural—there must of necessity be an ever-increasing and immense demand for farm implements and machinery.

They secured the agency for a well and favorably known line of implements and a competent staff has been employed to conduct this large and growing department.

Fifteen Tractors Sold With Plows.

The photograph accompanying this article will serve to convey a good impression of the volume of the machinery business that is secured.

Fifteen tractors comprised one shipment that was taken delivery of by as many successful and progressive farmers. The tractors led to the sale of many plows as well, and are proving to be real time and money savers for their owners. As an instance of what they accomplish one purchaser plowed last season no less than seven hundred acres of land. During cutting time the tractors are used to haul two or more binders.

Sell Fifty Automobiles.

Alive to the possibilities in the sale of automobiles the Sutherland-Steck Company have sold during the past season close to 50 cars—almost an equal division of light and heavy models.

Big Sale of Accessories.

The business of selling cars has developed so splendidly that it is only natural to have anticipated a good demand for automobile accessories. A large and varied stock of accessories is carried and these goods have been kept well displayed in the windows and silent salesmen, and during the busy part of the season on display tables. No opportunity has been lost in meeting the prospective car owners' needs as developed through the big increase in the number of cars. It scarcely need be mentioned that the sales of casings and inner tubes alone is a tremendous item and a conservative estimate of this firm's business for accessories alone last year, including tires, is $5,000.

Firm Conducts Two Stores.

The hardware part of the Sutherland-Steck Co.'s business has developed to a great extent and a second store is operated a short distance south of the C. N. R. track. Here a good stock of harness is carried and a larger showing of ranges and heaters is carried here—as the store offers better means of display.

Bicycles Sell Well.

As an indication of the continued interest in cycling in parts of the West, it is estimated that some 35 or more bicycles have been sold during the season. The usual demand consequently exists for accessories, which are also carried in nice assortment.

Competent Help Very Scarce.

Owing to the withdrawal of the younger men from the district to the war, the firm has experienced much difficulty in securing and maintaining competent help. "It is," said Mr. Sutherland to HARDWARE AND METAL, "very serious—and it is difficult to know what is ahead of us in this respect."

In respect to 1918 business some uncertainty exists as to how well deliveries may be made, but plans are being laid for a big year's business, and every ef-

fort will be made to push the sale of those lines that can be secured.

It is quite evident that the growth of the automobile and tractor ends during the past couple of years has been one of the distinguishing features of this increasing business. When one considers that the sale of accessories has reached the large figures mentioned, in what is an out and out farming community, some idea as to the possibilities in the sale of these goods should sink into the minds of those who are still following the old channels alone. Keeping in line with this end of the hardware business will add materially to the sales and profit end of the business if watched closely and followed up

Auto Accessories Easy to Handle

Automobile accessories do not present any greater difficulty in handling than many other new lines added to the hardwareman's stock. A little study, a little of the energy displayed with your other lines, and the accessories will respond in point of sales.

Window displays, interior displays and newspaper advertising have all played their part in building up the tool department, the housefurnishings or paint departments. Try this combination on your auto accessory lines; back it all up with a good measure of service, study the goods so that you know the selling points and these lines will move over your counters at a rapid rate. The automobile is here to stay, the hardwareman is the logical distributor of auto accessories. The story of the success of the Sutherland-Steck Hardware and Implement Co. of Dauphin, Man., in handling these and other lines is being repeated in any number of towns and cities throughout Canada. There is a future and a big one to this end of the business, but don't forget that there's a present and that the present is looming very large. To those not yet handling auto accessories, a golden opportunity is being missed—to those already handling the line, increase your scope, extend your activities, keep after business hard and 1918 will reveal new sales records.

Four Stores Co-operate in Catalogue

New Liskeard Hardware Store, Men's Furnishings, Grocery and Dry Goods Stores Decide to Issue Catalogue Jointly to Meet Catalogue Distribution of Mail Order Houses — Make Arrangements with Bank to Look After Financial End

BUT of the North Country comes the news that a new idea is being evolved to meet the mail order competition of the large department stores. The idea is for four stores of different classifications to combine in the issuance of a catalogue to be distributed throughout the country in that district. The idea was conceived by merchants in the town of New Liskeard and the firms which have entered an agreement to carry out the project are the George Taylor Hardware Company; Wesley McKnight, men's furnishings; Elliott & Co., dry goods; S. Greenwood & Sons, grocers.

Will Give Complete Selection

By combining together in the issuance of this catalogue these merchants have in reality all the advantages of a department store or mail order house. One of the reasons for the loss of trade to the mail order houses in the past has been the advantage of wide selection which the consumer has had. For instance, if an order were being made out for some groceries to the mail order house and a small order for hardware amounting to $1 or $2 in value was needed it was a simple matter to include the order in the one with the groceries. Very often the consumer would be content to buy at the local hardware store if it were not necessary to make the buying trip especially for the article or articles in question. When the consumer starts to make out an order he usually goes over his complete list of wants. The merchants of New Liskeard have found that quite a lot of business has been slipping away because the consumers have been inclined to make up these combination orders.

Catalogue to Be Issued May 1

This arrangement has progressed so far that these four concerns have each agreed to contribute $200 toward the expense of the catalogue. The catalogue will comprise between 1,400 and 1,500 pages. With hardware, groceries, dry goods and men's wear the lines will be as complete as any consumer would wish for. Some of the merchants who conceived the idea took it up with the Board of Trade with the hope that all the merchants could be interested in the scheme. This was later found to be impracticable and it remained for the merchants themselves to take the initiative in the matter. The result of these deliberations was that four concerns decided to go into the scheme.

Four Responsible Business Houses

It was, of course necessary to get concerns into the arrangement who would have the confidence of the community, stated the manager of one of the companies, in describing the scheme to HARDWARE AND METAL. These concerns who have decided to go into it are well-established and have a business connection in the community extending back for some time. Not content with this assurance to the community we have made arrangements with the bank to make the financing of the proposition comparatively simple. The bank will make adjustments according to the amount due the various stores from each of the orders.

May Send Order to Any One of Four

The arrangement has the advantage of constituting each of the parties to the agreement a committee to see that the balance of the order is filled out properly. For instance, if the order were mailed to the hardware company and there were orders for the other three stores contained therein, the hardware company would undertake to see that the balance of the order was secured and shipment made at the same time. This would be accomplished by getting in touch with the other concerns and having them deliver ready for shipment the goods required. In this way the one order from the consumer would suffice to set the wheels of trade in motion within the town and so relieve them of the necessity of making a special trip to do the purchasing.

Saving in Freight

When an order of sufficient size is thus made up the saving in delivery charges would be considered as compared with the mail order house. For the goods are usually sent by express from the mail order house. Where carrying charges are included in the price of the article this must of necessity be added to the cost of the article. Where the consumer pays the express charges on receipt of goods it comes out of his pocket more directly. Express charges are based on the weight of parcel and distance to be carried by the express company. Whether the consumer pays the express charges or whether the mail order house pays them, they are eventually added to the price of the goods. Carrying by express is more expensive than carrying by freight, when the goods are brought in in large quantities. The retail store has the advantage in this respect in that it is closer to the point of distribution. This works out to the advantage of the retailer when the price of way freight shipments is considered as compared with the cost of carrying in carlots. For instance, two of the items instanced were those of paper and nails. By way freight the cost of shipment of paper from Toronto to New Liskeard is 56c per hundred pounds and on nails 59c per hundred pounds. When these commodities are brought in in carload lots the cost is 39c per hundred pounds. This difference is often sufficient to allow the retailers a good margin and at the same time

allow him to undersell the mail order house. Mr. Perrault instanced a case where they are able to beat the mail order house on the sale of oyster shell, used to a large extent for poultry. The department store sells this at $1 per hundred pounds plus the freight which costs 62c per hundred to New Liskeard from Toronto. The George Taylor Hardware Company can sell the oyster shell in New Liskeard at $1.25 per hundred and when the freight delivery charges of 15c per hundred are added to other points in the district the cost to the consumer is brought to $1.40. The cost to the consumer from the mail order house on the other hand is $1.62. This enables the consumer to save 22c per hundred by buying locally. If quantities of 500 pounds are purchased at one time the price is $1.32 per hundred pounds. In large quantities such as this the clear saving would be 32c per hundred pounds.

This is but an instance of what can be done in the way of meeting the mail order competition. Furthermore, there is an advantage to be given the consumer in the matter of quicker delivery. With the retailers on the ground nearer to the point of distribution the consumer can have his goods delivered in most instance the same day and the outlying districts the day after the order is sent. With the mail order house it often takes much longer.

New Idea in Distribution

The idea which is being evolved in this instance is indeed a new one. It will be watched with a great deal of interest by merchants everywhere. It means that the merchants of a particular community are combining their efforts to give as complete a service as the mail order house. It would seem to have all the advantages of the mail order house in convenience in ordering goods, with some of the disadvantages left out. For there would be the same range of goods to select from, the assurance that the order will be filled without further trouble on the part of the consumer, prices would be equally as low as the mail order house, and delivery would be better.

Helps Smaller Retailers

The George Taylor Hardware Company has in the past been of service to some forty small retail hardware stores in the Northern Ontario district in the matter of buying by buying in large quantities after they had been assured that these retailers would purchase certain quantities for their requirements. In this way they have acted as a central distributing agency for a number of the smaller concerns and in this way have enabled them to take advantage of a cheaper freight rate.

Current Events in Photograph—No. 12

PLAYING WITH VON TIRPITZ

THERE have been many rumors of the means adopted to befool the Germans; to enable the grey fleet in the North Sea to do such wonderful work in protecting the sea lanes everywhere. This photo demonstrates one of the methods used. For seven months a fleet of wooden dreadnoughts did their part in deceiving the German admiralty. While the real dreadnoughts were being used as convoys these ships lay at anchor to decoy the German ships from their haven. At last they were successful and the German vessels were lured to Kephalo where British destroyers lay in wait to open fire. In the fight which followed the German flotilla suffered severely. One of the wooden ships was hit and beached to form a breakwater. Photo shows the one ship partly submerged and the other afloat.

Good Roads Pull for Auto Sales

Noticeable Increase in Sales of Automobiles and Accessories in and Around New Liskeard With Coming of Good Roads—Service Assists Greatly in Winning Confidence and Customers

A FEW years ago the roads around New Liskeard in the northern part of Ontario were anything but good. Being a comparatively new country the majority of the roads were corduroy roads. This type of road is not conducive to auto sales, for riding over them is not exactly pleasant. As an indication of the way good roads have helped the sale of autos, the George Taylor Hardware Company four years ago took on an agency for one of the well-known cars. The first year their sales amounted to five cars, the second year they were increased to twelve, the third year they sold twenty and the fourth year the sales amounted to forty-two cars. "Our rapid increase in sales would not have been possible were it not for the rapid improvement in the condition of the roads in the northern part of this province," stated J. Perrault of the George Taylor Hardware Company at New Liskeard. "The development of these better roads came partly in the natural course. But when they were here it made the sale of autos possible. During that same period our sales of automobile accessories have increased in about the same proportion as our sales of automobiles."

Here is a strong argument for the hardwareman to be an enthusiast for good roads in his district. For with good roads there would be an increase not alone in the business through the sale of automobiles and accessories, but there would be an increase in the general hardware trade as well. The reason for this is found in the fact that the country is brought into the town. With a short trip of five or ten minutes in an automobile the farmer can be into the town. It will mean that he will make more frequent trips to the town. If he does not make them himself some members of his family will be making them more often. It is always conclusive to the sale of hardware articles to be able to let the farmer have them at the time he wants them. For it often happens that he will get along somehow—patch up an old article, if that be at all possible rather than make a special trip to the town to make the purchase. But with the hardware store within five or ten minutes of his farm he does not stop to consider patching up the old article.

Developing of Farmlands helps

The developing of farmlands in new districts will also help increase the hardware business as well as the accessory business. An indication of this trend is to be had in the district around New Liskeard, Cobalt and Cochrane. Four years ago there was very little in their bid for the automobile trade and binder twine sold in that district. At that time the George Taylor Hardware Company handled some 800 pounds of binder wine for the farmers of the district. This year they expect to have a shipment of between 16,000 and 20,000 pounds, or between 8 and 10 tons. One farmer alone will this year take in the neighborhood of 500 pounds of twine. This man has within the past few years cleared 419 acres of land, which is suitable for fine farming. Wheat, oats and peas, timothy and clover, are being raised extensively in the district. The farmers are also going into sheep raising on quite a scale.

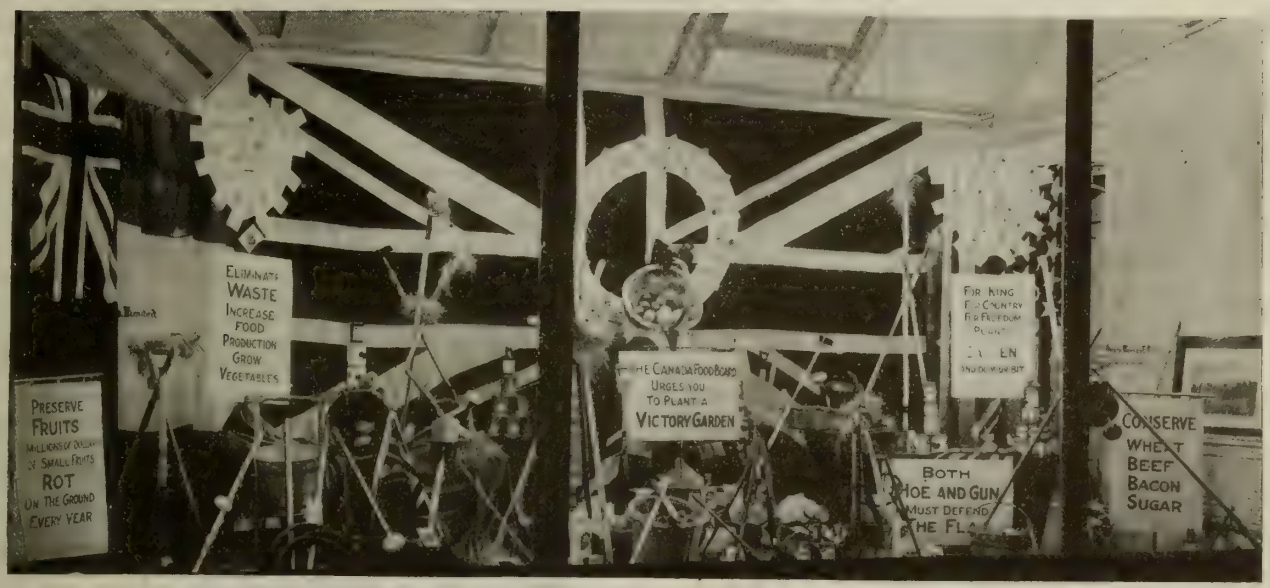
Field for Motors

In a district such as the one in the northern part of Ontario there is an excellent field for motors for farm purposes. The George Taylor Company has recently taken on the agency for motors and will push the sale of this line hard. They have installed one of the motors on the floor of their hardware store to permit the farmers to make thorough examination and see it in operation. Their store is also of sufficient size to make it possible to place one of their sample automobiles on the floor. With these two articles very much in evidence and with good salesmen to explain their advantages they are looking forward to an excellent trade during the coming season.

Advantages of Being Known

One of the strong points in favor of the George Taylor Hardware Company accessory trade was the fact that they are well-known in the district and have a reputation for good business. This fact induced the manufacturers of their line of automobiles to make more favorable terms to them in order to retain their services as agents. It had been the custom of the automobile manufacturer to start shipping cars early in the winter. These cars called for payment at the time of delivery. This meant of course that the dealer had to put up the money for the cars and hold them in storage until such time as they commenced to move in the spring. The George Taylor Company objected to this, as many other agents have also objected, on the ground that they were tying up their money for several months and the manufacturer was the one to obtain the benefit by getting ready cash as soon as the machines were delivered.

Above illustration shows a fine piece of motoring road. Hardwaremen who deal in automobiles and accessories should be enthusiastic supporters of the good roads idea.



This seemed an injustice which led to the George Taylor Company refusing to carry on the agency. The outcome of the matter was that the manufacturer induced the company to continue the agency on the terms which they had stipulated, namely, shipment of cars at the time they were called for.

Service an Attraction

This concern has always made it a point to cater to the needs of all car owners of the district. With free air and a gasoline service station and well-equipped garage there has been every inducement for the accessory business to drift toward the George Taylor Company. An additional factor has been the willingness at all times to go to the

(Continued on page 114.)

LET THE HOE HELP THE SWORD

FEATURE THE WAR NEED FOR PRODUCTION

THERE never was a time when there was such a crying need for production as there is this year. There never was a time when the merchant could do more toward helping in this great work, and while so helping his country also help himself. The hardware man should be one of the apostles of production. For patriotic reasons that contention is indisputable, for business reasons it is equally so.

Every garden that blossoms this year means money for the hardwareman, money that he may take with the best of grace for the expenditure of this money means profit all down the line. It depends on each individual merchant whether he will profit or no, whether he will help the great cause of production or no.

The accompanying illustration is a window dressed by the Henry Morgan Co., Montreal. It voices the call to plan a victory garden. It features the rakes, the shovels, the hoes, the watering cans, the hose and the seeds, and all the other garden paraphernalia that is part of the hardware merchant's stock-in-trade.

Hardware men, this is your great chance to help the cause of Democracy, to help your country, to help your neighbor, and to help yourself. Feature the needs of

THE VICTORY GARDEN.

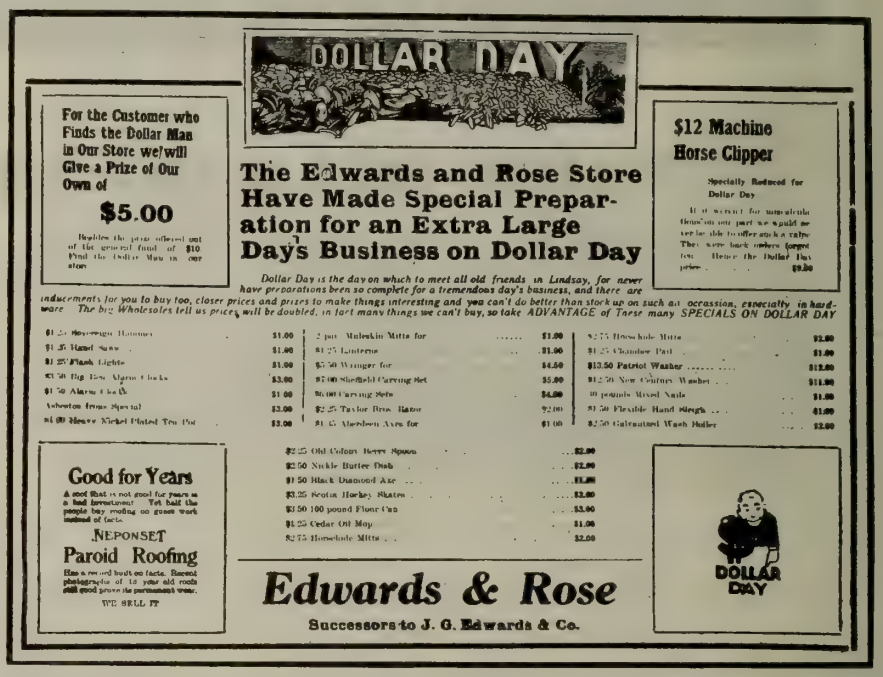
$9,000 Worth of Business on Dollar Day

Merchants of Lindsay Pleased With Results of Activity of One Day — Hardware Dealers Take Active Part—Twenty Prizes Given—Stirs Up Trade in an Otherwise Quiet Period

THE value of Dollar Day as a method of injecting new life into the buying section of the local community has long since been proved in Ontario cities and towns. Perhaps in none of these has it more firmly rooted itself as an effective attraction of business than in the town of Lindsay, Ont. Merchants of this town realize that something is necessary to arouse people from the state of mental inertia into which they unconsciously fall during the winter months, and they therefore do their utmost to reach everyone in the district with news of special bargains on Dollar Day.

This day is an annual event in Lindsay and is generally held at the first sign of approaching Spring. For this reason it is possible for dealers to make a good start on their new spring and summer stocks.

Hardware dealers in Lindsay enter upon the annual campaign with as much interest as other branches of trade. The majority of town merchants give their support to the movement, and this fact is largely responsible for the success which attends it. To hardware dealers the advent of Dollar Day is welcomed, for it comes along in an ordinarily quiet season and helps the dealers to work off some stocks of slow-moving lines which have accumulated during the fag-end of previous seasons. The plan received its inception four years ago, and every year it has resulted in greater benefits to the majority of the town merchants.



How the Plan Works Out

As worked out, the plan is this: On Dollar Day each purchaser of a dollar's worth of merchandise in any store in the campaign secures a coupon. These coupons are all turned in to the local newspaper office, where they are shaken up and draws made by a certain assigned individual. The holders of the lucky coupons receive the prizes, of which there are thirty-nine. The prizes are all given in money, the highest individual award being $20.

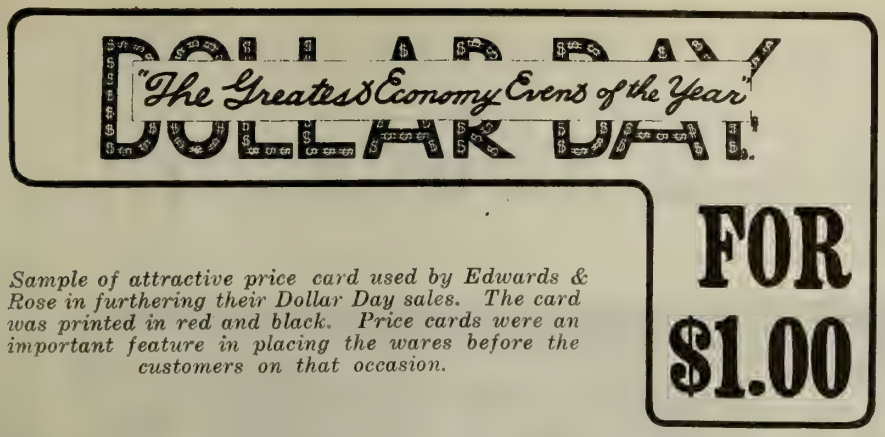
In addition to this prize there is a further award of $10 in cash to the person who identifies the Dollar Man in a local store. This elusive personage is a stranger to the townspeople and spends the day among the local stores. Mr. Dollar is claimed to be absolutely honest and will therefore admit his identity provided he is properly approached.

The whole inspiration of the movement is to draw trade to the town for the day and also to encourage the purchase of articles in stores of each class. A list of stores appearing in the local daily newspaper tells which merchants are giving their support to the movement. This gives local dealers some publicity among the townspeople in addition to any increased revenue derived from the business transacted on the day.

The accompanying illustration shows one of the windows of Edwards & Rose Hardware, Lindsay. This firm succeeds J. G. Edwards & Co. Both windows of this store were specially dressed for Dollar Day, with a profuse showing of Dollar Day pennants announcing the big sale. Attractively designed cards to be used as price tickets and window cards by the stores in the campaign were distributed by the local newspaper office.

Edwards & Rose, hardware merchants, of Lindsay, Ont., went after trade on Dollar Day in an energetic manner. Above is a reprint of a half-page advertisement which appeared in their local paper. It will be noted the advertisement has an attractive layout and quotes prices.

Special Lines Featured by Hardware Dealers



Washing machines, wringers, boilers and graniteware were the lines chiefly featured in the big Dollar Day sale by the Edwards & Rose Hardware. Washing machines were reduced from $12.50 to $11; wringers from $5.50 to $4.50, and a bargain assortment of graniteware sold for $1. Another bargain for the day in this store was the reduction of the price of an electric iron from $5.50 to $4. Wash boilers were reduced from $5 to $4. Flour cans, horse clippers, wire nails at 30 pounds for $1, lanterns, sleighs, coal scuttles, ash sifters, pails and bird cages were other lines which played a foremost part in the big sale in this store. These lines can be seen featured in the accompanying window illustration.

The hardware dealers of Lindsay believe in preparing the way for bigger results in such a sale as that of Dollar Day, and take every precaution to place full information before the townspeople and the inhabitants of the surrounding district in advance concerning the lines to be featured.

The town of Lindsay is a recognized agricultural centre, located in a rich farming district. For this reason hardware dealers make a special feature of lines required by this class of trade. Horse clippers, blankets and other stable requirements are generally foremost lines.

Bargain Prices Quoted Through Press

In order to cover the widely distributed district with news of the bargains offered for Dollar Day, it is necessary for the town merchants to do considerable adver-

Sample of attractive price card used by Edwards & Rose in furthering their Dollar Day sales. The card was printed in red and black. Price cards were an important feature in placing the wares before the customers on that occasion.

tising in the local papers. One of these ads. used by Edwards & Rose Hardware is reproduced herewith. These ads. offer real bargains, which secure a tremendous day's business for Dollar Day. Customers are induced by the bargain prices to stock up on such lines as are featured, for the prices allow of buying close. A big array of bargain articles are enumerated in the ad. at prices much below the regular quotations.

Six special bargains are offered for the day, consisting of a combination of articles. The Edwards & Rose Hardware on Dollar Day combine the following: 1 tin pail, 1 strainer, 1 butter print and 1 granite dipper into one bargain assortment at a price of $1. Another assortment at $1 comprises a milk pan, granite kettle, granite colander, granite pudding dish, granite sauce pan and granite pie plate. Still another combination consists of a granite tea pot, granite tea steeper, granite cup, all for a price of $1. A coal scuttle, ash sifter, fire shovel and wire toaster was a further combination offered for $1. Other bargain prices on special articles featured on Dollar Day can be seen by referring to the advertisement shown herewith.

Heavy Mitts a Popular Line

Heavy leather mitts are also featured in the big sale. This is a line which usually receives much attention in the normal trade of the Lindsay Hardware dealers. This is due to the fact that the town is something of a railway centre, and the headquarters of a number of manufacturing plants and also a good farming centre. The Lindsay arsenal recently established in the town employs a large number of mechanics in the manufacture of munitions. It is a branch of the Dominion Arsenal at Quebec, and is turning out essential war supplies on a large scale. The arsenal mechanics, railway men and farmers combined create a big demand for heavy mitts and gloves both in summer and winter. This line, therefore, played a prominent part in the Dollar Day sale, as far as the hardware stores were concerned.

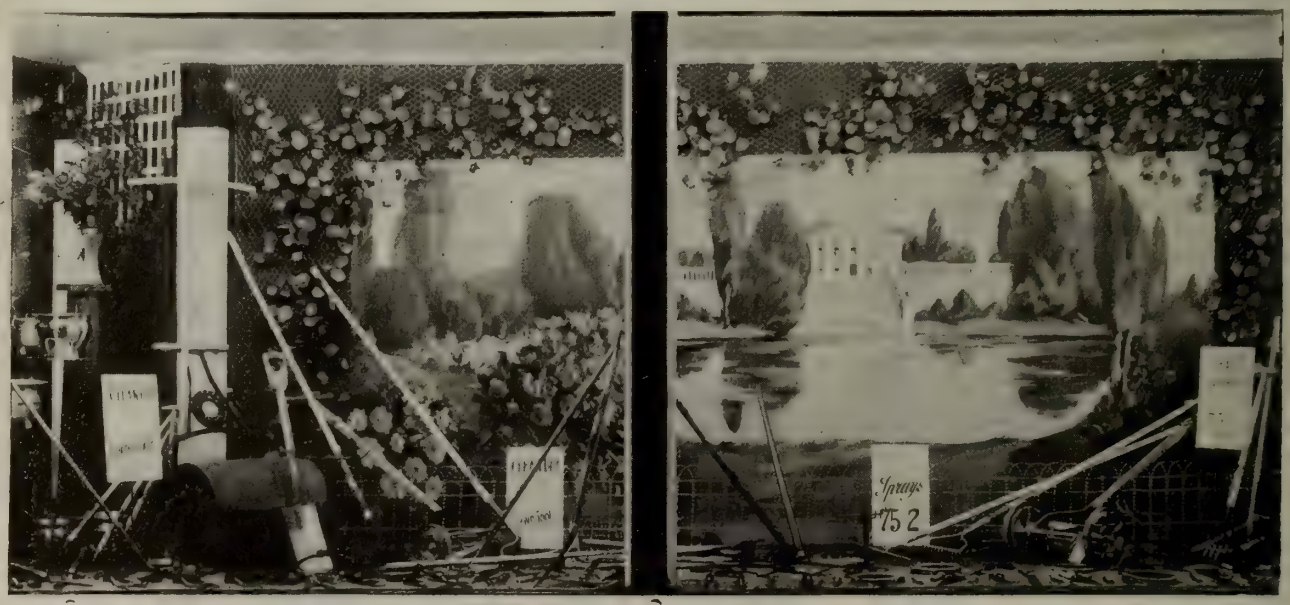
Value of Dollar Day

The chief benefit accruing to the Lindsay hardware dealers from Dollar Day lies in bringing large numbers of customers to the stores from the district surrounding the town. The sale is of little monetary value, for the bargains offered represent real price reductions. The town dealers state that in a sale such as that of Dollar Day good value has to be given. No attempt is made to cut prices on certain articles in order to draw trade for other lines on which a good profit can be realized. In addition, all the articles figuring in the sale are of a useful character. In their purchase each customer is saved a little money by purchasing on Dollar Day. The increased amount of business transacted compensates the dealer for the slightly better prices offered and the stores are brought into closer contact with those from whom they have to look for future trade.

Big Turnover of Small Hardware

The chief lines benefiting by the sale are certain classes of small hardware. There are three ways in which the title "Dollar Day" can apply to the methods of business transaction on this particular day. Purchase of a number of articles combining to make the price of $1 is one way which the merchants have of bearing out the idea of the bargain sale. Others merely give a coupon for the purchase of $1 worth of merchandise. Still other dealers will give $1 off on the purchase of certain larger articles. Of course most articles figuring in the sale have some reduction in price and a coupon is invariably given for each $1 purchase.

(Continued on page 124.)



Merchants of Lindsay spent much time and thought in arranging their displays for Dollar Day. Above window shows dis play of Edwards & Rose, hardware merchants. The window carried numerous pennants which gave a touch of brightness. Examination will indicate the variety of articles on which a bid for trade was made.

Suggestions for Seasonable Window Trims

Now that the spring painting and cleaning season is here the hardwareman will be turning his thoughts towards getting up a seasonable display to help along the sales of his paint and housecleaning lines. Above suggestion could be used either as the background for a window display or as a side wall panel display.

Displays of gardening tools will be timely from this time forward. Above window display shows the artistic possibilities in a window display. In order to catch the eye of the passer-by there must be something unusual in the window display. Above suggestion might form the basis for a somewhat similar but different arrangement.

Sales Conferences on Accessories

Getting Staff Together to Discuss Auto Accessories Working Out Successfully — Accessories Influence Sales on Other Lines—Using Space to Advantage— The Selling Idea Predominates—Show the Goods and Price Them

"AUTOMOBILE accessories are a comparatively new line with us. As a matter of fact our stock is not yet as complete as we would like, but the sale of those lines which we have has been splendid and is on the increase. We have handled tires for about one year, chains, freeze-proof solution, greases, etc., for about six months, and it has been no trouble to get these goods over the counter." In this manner R. G. Doran of the Vokes Hardware, Ltd., Toronto, expressed satisfaction over their adoption of auto accessories as a regular part of their stock.

Care in Selecting Lines

Continuing, Mr. Doran said: "We have not rushed into this part of the hardware business; we have given careful thought and consideration to every line bought. Practically every item to be considered was new—the question with us was, how to get the goods over the counter once we had them. Our salesmen can be considered the equal of any in the hardware field, but how to educate them quickly in the talking points of auto accessories was our chief consideration.

Sales Conferences Suggested

"The suggestion was made, why not conferences? Why not have the factory representatives where possible talk to our salesmen? Where this might be impossible, get all possible information from the circulars and advertising on each product, get the salesmen together to discuss same and in this way familiarize themselves with each line.

Successful From Start

"This policy has been followed out with marked success. Let me give a couple of instances. We handle two lines of chains, manufactured by the one company. We had the factory representative give us the talking points on each, show wherein the one was superior to the other, answer questions which occurred to us as possible ones from the consumers' standpoint. The result?—well, we know what to tell the motorist when he wants chains, we can explain why the one is superior to the other; practically every motorist is glad to find that there is real knowledge back of the sale.

Care in Tire Business

"In the case of tires, it has been felt that this business was one which needed careful handling. In fact, this point was emphasized by one of the factory representatives in talking to our salesmen. The tires we sell," Mr. Doran explained, "are guaranteed to give a certain mileage. The question to be settled was, how is it

View showing section of Vokes Hardware, Limited, Toronto, devoted to automobile accessories. Note the neat arrangement of the various articles. Automobile accessories is a line that lends itself to attractive display.

Window display of automobile accessories as arranged for the Vokes Hardware, Limited, Toronto. Note the arrangement of chains, some of which hang from the top of the window while others are placed on the tires. This made a striking display and could not help but catch the attention of the passer-by.

possible to obtain this mileage and not lay ourselves open to abuse over the guarantee clause?

"The factory representative in talking tires gave us the reasons for premature depreciation of tires. He explained that under-inflation was the greatest source of trouble; showed how skidding through the too-quick application of brakes would wear away the rubber—in fact, he gave us details on the care and use of tires which, when passed on to our customers, are not only appreciated, but impress them with the fact that we know the product we sell will give the mileage we guarantee.

Record Kept of Sales

"To further protect ourselves against unjust claims, a record is kept of every tire which goes out of the store. The serial number is kept on record and the date of the sale. As a basis of arriving at possible mileage we have adopted the following plan. We estimate that a maximum amount of service is rendered on the basis of ten hours running a day at the rate of ten miles an hour, in short, one hundred miles a day. Should a claim for a defective tire be made, our records show date of purchase, and it is an easy matter to check up on the above basis whether the claimant has any consideration due.

"There are other important elements which have developed since we have taken up the sale of auto accessories. Not the least of these is the influence on the sale of goods in other departments. Taking paint, we find that a greater interest is manifest in automobile finishes. This has been more apparent since winter shows signs of breaking, and many cars stored away are due to make their appearance on the streets again. Another reason we assign is the tendency of car owners wherever possible to use their cars another year.

Auto Paint Sales on Increase

"These people want to know what can be done to their old cars—how they can get the appearance of newness without the necessity for a large expenditure of money. The average motorist looks on the task of painting his car as one impossible from his own standpoint, but this is by no means the case. The work entailed in renewing the surface of a car body, brightening the wheels or going over the top and side curtains is comparatively easy. We find the worst feature is cleaning the car preparatory to painting, and once we can overcome this objection, the sale is almost sure to follow for the necessary enamel and varnish, etc.

"In the case of tools, we carry socket wrenches for spark plugs, etc., singly and in sets. The sets range in size from the small ones used on the cheaper cars to those which contain necessary sockets for all connections on the highest priced car. But it is not only these that the motorist wants, he will buy pliers, wrenches, hammers, etc., besides items which may add to the pleasure of his summer outings.

These include such items as vacuum bottles, lunch kits, folding chairs, folding cups, knives and forks—in fact, only when one gets down to an analysis of the effect carrying auto accessories has on the sale of other lines is the realization brought home of their essential place in the realm of the modern hardware store."

Accessories Hardware Line

The Vokes Hardware store is only another example of how progressive hardware merchants are entering successfully the auto accessory field. The hardware merchant is essentially the logical distributor for this class of goods, he has so many lines directly related to the motorists' needs that no traditions need be broken to take up their sale.

The matter of display holds no terrors to the hardware merchant—he has the window space, he has the store interior, he knows how to arrange his goods effectively. The question of sales is one which the salesman picks up quickly through discussion of the line with factory representatives, through a study of the advertising, by actual handling of the goods.

Getting the Eyes of the Public

In the Vokes store, the store windows are used extensively. Reproduced herewith is a view of a display made recently

Big Stove Display Has Striking Power

Lindsay Hardware Company Devotes Separate Store to Stoves and Maintains Display in Window—Special Department Has Served to Bring Goods Prominently Before Newcomers to Town—Big Business Has Been the Result

THE firm of Cinnamon-Allin, Ltd., hardware merchants, Lindsay, Ont., believe in the striking power of a big display of stoves to help foster trade in that line. About two years ago they fitted up an entire store adjoining their regular hardware store to be used as a stove department. Now after a lapse of some months they are able to speak authoritatively as to how it worked out in their case. Cinnamon-Allin, Limited, are of the opinion that a separate store or department makes for better business in the stove line. The sale of a stove constitutes what might be termed an unusual purchase. It is not unusual in the sense that there are very few stoves used. On the contrary, there are very many stoves used and sold. But for the average family the purchase of a stove is an event. Usually they make one stove last for years. The amount involved in a purchase runs into considerable money, and the prospective purchaser is going to approach such a purchase with due deliberation. It is a time when they are very desirous of having time to thoroughly canvas the situation. They do not care to be disturbed by other customers passing in and out of the store. Furthermore, the salesman who is attending to the prospective stove buyer will not be interrupted by other customers coming in for small hardware articles. This has been the idea which has induced Cinnamon-Allin, Limited, to devote an entire store to their stove display. This store adjoins their regular hardware store and is connected therewith by an archway.

Sales Have Increased

A representative of HARDWARE AND METAL called on this hardware firm about two years ago at the time when they were just getting ready to place their display in the new addition to their store. At that time their stoves were kept on the second storey, near the rest room. The display was tastefully arranged at that time, but it did not constitute an advertisement, because it was to the rear of the store and was on the second storey. After two years it is interesting to record the experience of this concern. "A lot of people never knew we had a stove department until we placed our stove display on the ground floor in a store by itself," stated one of the members of the company. "We have picked up a lot of new trade and have greatly increased our sales since having a separate stove department."

Catches the Newcomers

A concrete example of the way this stove department helped trade came as a result of an increase in population of Lindsay by reason of the establishment of a branch of the Dominion Arsenal in that town. This industry employs several hundred mechanics, many of whom have been brought to the town from Quebec and elsewhere. As a result many have been settling in the town. Invariably they would have to purchase a new stove, for it often happens that a family will not care to move the stove which they had at their previous place of residence. It is a heavy article, and if it is at all possible to dispose of their old one

Stove display in store of Cinnamon-Allin, Limited, Lindsay, Ont. This firm devotes one store entirely to their stove business, being connected to the main store by an archway.

they very often will do so rather than pay freight to move it. The chief increase in the stove business of this concern within the past two years has been with the newcomers to the town. Their stoves were prominently displayed and when the prospective customer was in the mood for buying a stove the striking power of the display induced many of them to examine the stoves handled by the firm. Once they secured their attention to the extent that they would come to look the stoves over it then became a matter of salesmanship.

Repair Work an Advertisement

The fact that Cinnamon-Allin, Limited, have two men working on stove repairs for the greater part of their time constitutes a good advertisement to the stove department. The firm is an old-established one, which is also an additional factor helping toward trade in this line. For the newcomers there is publicity given to the stove department through the fact that men are out doing repair work in various parts of the city. This, together with the store display, the store window and the advertisement in the local papers, have been sufficient to capture much trade from the newcomers.

Carry Complete Range

Cinnamon-Allin, Limited, carry a very complete line of stoves, ranges and oil heaters. Their advertising of these lines is timely. For instance, during the coal shortage this winter they were making a strong bid for trade in oil-burning stoves and heaters. It was doubtful at times whether or not the people would be able to get coal to use in their heaters and ranges. But there was no shortage of coal oil. An advertisement featuring their oil-burning stoves and advising the people to "burn oil" caught their attention at the time coal was scarce.

Made Reduction on Dollar Day

As an inducement to people to buy stoves during the recent Dollar Day sale this firm made a reduction in the price of their various lines of stoves to the extent of $1. This, however, did not prove to be a fruitful method of increasing sales. The difference of a dollar is perhaps not sufficient to induce a sale on an article which runs into a considerable sum of money. The inducement to buy on Dollar Day was stronger on smaller hardware lines.

Handling Stoves for Many Years

This firm has been handling stoves in the neighborhood of twenty-five years. This has been a factor in helping them retain the business of their regular customers. For those who have recently made their home in the town the displays and advertising are the mediums through which they have been reaching out to make these people their steady customers. The town of Lindsay is a big trade centre for the district round about, the farmers making it a point to come to town on Saturday to do their shipping. The district is rich agriculturally and the hardware store naturally is an important place of call.

SALES CONFERENCES ON ACCESSORIES

(Continued from page 112.)

which had splendid results. In this connection, Mr. Doran said: "It is necessary that we get our goods prominently before the people. We must put ourselves on the map as headquarters for auto accessories, and no more effective means exists than the store window. The displays are changed frequently or at least re-arranged, to maintain an appearance of freshness, and we can attribute many sales directly to the showing of the goods so prominently."

Interior Backs Up Windows

The interior of the store is such that those entering are reminded that auto accessories form a part of the stock. Pillars run through the centre of the store and on two of these automobile tires and chains are displayed in such a manner that they will be seen by all.

Using Space to Advantage

Between these two pillars, on tables arranged at a convenient height, other items of interest to the motorist are attractively arranged. These displays supplement the regular accessory section for which a showing of the goods is made on a large counter display table on one side of the store and showcase directly opposite. On the table spark plugs, headlight lenses, inner tubes, graphite, greases, lubricants, etc., are all in plain view of the customer. The case contains tools of varying descriptions, including wrenches, pliers, socket wrenches in sets, etc. Automobile paints are stocked in the regular paint department at the back of the store but in plain view. Good use is made of color cards, lithographed hangers and counter easels to secure the eye of the motorist.

The Selling Idea Predominates

Throughout the Vokes store the idea of selling predominates. The arrangement of goods is such that sales are quickly handled. Down each side drawers are used to carry the stock, and samples arranged on the front in plain view of everyone entering. Brightly-colored labels giving the names and sizes of goods in the drawers supplement the samples shown. The prices are marked on the sides of the drawers in plain figures, in fact, every article in the store has the price in plain figures.

In this connection Mr. Doran was emphatic on the importance of having every item tagged or marked with the price. "Take our displays through the centre of the store which customers are brushing against—which they can't help but see—if at all interested, they can readily find the price, and let me tell you it's a great assistance to our sales staff. Get the goods out where people can see them, have them priced, and sales are that much easier. We have to consider every means possible to operate successfully with a curtailed sales force, and goods displayed and priced often sell themselves."

Continuing, Mr. Doran stated: "Only this morning I routed out some corkscrews, the large type used by hotels, got them priced and out on display. It was less than half an hour later that one of our customers was in, saw them, and said, 'Why I didn't know I could buy these in the city, I'll send over for one if you'll get it ready for me.' These had been in stock for goodness knows how long, and I certainly attribute the sales directly to getting the goods out from under cover."

Showing the Goods—Not Hiding Them

Mr. Doran explained that they were devoting all their spare time to having everything sampled on the drawers, or display boards, or arranging space in the centre of the store for the bigger items. Goods well displayed are half sold and we are most certainly not ashamed to show what prices we are selling our goods at.

Bright Interior Helps

Every effort to brighten up the store and to keep things looking clean and tidy is made. The ceilings and walls have been whitewashed and brighten the interior wonderfully. The store, which is narrow but very long, derives a great deal of its light from windows on one side. These windows are set back considerably from the fronts of the wall shelving, but the use of white paint has helped out considerably here too.

Eliminating the "Catch-All" Nuisance

One difficulty experienced with these windows has been to keep the window ledges, which are about thirty inches deep, free from the appearance of "catch-alls" for odd lines of goods. To overcome this, display boards are being built to be set in flush with the shelving, and night latches, inside sets, hat and coat hooks, etc., will be sampled. Behind the display board the stock of goods sampled will be kept. This eliminates the possibility of unsightly displays, affords a good method of showing the samples, and the merchandise is kept in good condition.

The selling idea predominates throughout the Vokes store, and every effort to back up the work of the salesmen and increase their efficiency is made. Service to customers is based largely on the knowledge of the salesmen, and no means of keeping the salesmen informed and right on the job constantly is overlooked.

GOOD ROADS PULL FOR AUTO SALES

(Continued from page 106)

assistance of the owner of a car, no matter where he happened to be stuck or what the make of his car. When a car owner gets in a tight place the first thing he usually thinks of is to get "George Taylor to help him out." This willingness to co-operate in tight places has resulted in a favorable impression generally throughout the community and helps immensely to bring in trade in the accessory line.

Unusual Windows Pull the Crowd

Vancouver Hardware Store Arranges Three Battleships From Articles Common to a Hardware Stock—Called the Display "The Pacific Coast Defence"—Results Secured Were Splendid — Seasonable Displays a Guiding Feature

View of window of Fraser Hardware Company, Vancouver, B.C. Various articles common to a hardware stock were arranged in the form of three battleships. One of the striking features about the window was the scenery in the background. This scene is a reproduction of "The Narrows" with the Gulf of Georgia in the distance.

PUTTING across the unusual in a way that appeals was accomplished successfully by W. H. Jeffery, manager of the Fraser Hardware Co., Vancouver, B.C., in arranging his Christmas window display during the recent holiday season. Not only was the window the means of displaying merchandise successfully but it provided a topic of every day interest to residents of the coast city.

A description of the window, as given by Mr. Jeffery, will reveal the ingenious methods adopted in the arrangement and explains how simple these unusual windows are to arrange when a little thought and care is given in planning them. Full justice to the window has not been given in the photograph. The window is six feet wide and fifteen feet long and the camera failed to get the entire length.

The Pacific Coast Defence

"The three ships," Mr. Jeffery stated, "were representative of the Pacific coast defence, named the 'Invincible,' the 'Dakota,' and the 'Satsuma.' The scenery painted on the background represented the entrance to Vancouver harbor, showing even the much spoken of landmark 'The Siwash Rock', with the snow-capped mountains in the distance.

"At the far end of the window, further protection to the harbor was afforded by two large coast defence guns. These guns were made of 1¼ inch hose nozzles and clothes line pulleys. A small encampment of soldiers was shown in charge of the guns.

"In the foreground at the left of the window, nine freight elevators were built on a pier extending out into the water. These elevators carried the name 'Vancouver' and a card which read, 'the future grain terminal of the Pacific coast.' An engine and freight cars were alongside the elevators but cannot be seen in the photos.

Goods from Stock in Display

"The lighthouse with flasher made the scene very realistic. The small torpedo boats and destroyers were toys. The ships themselves were made entirely of hardware taken from stock and no single piece was damaged or made unsaleable."

A careful investigation of the window shows where roasting pans, jack chain, clamps, sad irons, spool wire, malleable pipe elbows and mouse-traps have been some of the lines instrumental in constructing these modern battle ships. The results secured from this unusual display were splendid, so Mr. Jeffery intimated, and he is a firm believer in the value of the window display as a means of reaching out to the man on the street.

Getting Value Out of Windows

There is no question of doubt as to the value of the window display. Are you, Mr. Hardwareman, getting the full value from the windows in your store? Do you keep them bright and clean, do you change the display often, do you use them for showing seasonable goods or just as catch-alls for surplus stock? Many times has the value of the window display been pointed out in the columns of HARDWARE AND METAL and it is not intended in this short article to enlarge on this part of the store sales program to any great extent. However,

it might be well to point out that the window display can be made one of the livest propositions in the hardware store of to-day if studied carefully and developed to its proper proportions. Through the store window the merchant is introduced to the public—the impression whether favorable or otherwise depends on the merchants' use of his display space.

The selling power of the seasonable window display cannot be overlooked. There are so many lines that are seasonable now, so many angles from which the hardware merchant can solicit business that his window display should be sparkling with suggestions.

Paint Very Important.

The window trimmer also will be planning a series of paint display windows and the merchant who keeps his store front painted and attractive looking will gain greater results from his displays in which he urges the use of this commodity. Because a merchant may be a tenant and his landlord does not want to paint the front of the store is no reason why the merchant should allow his store front to become shabby. The slight cost to the merchant will be repaid in sales and prestige many times over.

STORE EQUIPMENT ONE OF BIG FACTORS

(Continued from page 99.)

This is simply typical of many other innovations in May Bros.' store.

The Receiving Room

The receiving room is located at the rear of the store where all incoming goods are taken in. This department is reached by a wide driveway leading in from one of the main streets. This driveway and room is also used for outgoing goods for delivery to customers.

Between this receiving and delivery room and the main store interior a small room has been provided for receiving and pricing of goods, tying up of parcels, for delivery orders and for checking purposes.

This room has been found most convenient as the pricer can work in quietness and at the same time is readily available if needed in another part of the store.

Battery of Oil Pumps

A special battery of eight pumps has been provided at the rear of the store for handling oils, gasoline, etc. These pumps and tanks present a splendid appearance and are always ready for a quick transaction of business or the filling of orders on the lines they contain.

Special Glass Rack

Another very commendable feature in May Bros.' store is the special glass rack which is provided in the basement. This glass rack is a sturdy one capable of carrying a tremendous load and is very compact. It was built especially for this purpose and provision is made for all standard sizes of sheet glass 6 x 8 inches up to 40 x 42 inches.

As soon as a shipment of glass is received at May Bros.' store the original cases are opened and the glass is removed and transferred to the special compartments provided in the glass rack. In this way they can see what condition the glass is in and only glass in perfect condition is placed in the rack.

This glass rack prevents waste from breakage through carelessness; it saves the time of salesmen in the store, a stockkeeper can tell at a glance exactly how the stock stands of various sizes, and there is absolutely no danger of breakage from cases falling over, etc. Each compartment is neatly labeled as to size and other particulars.

The idea of special compartments or racks for various lines of goods has been carried out wherever practicable, with the result that in the basement or stock room a large amount of stock can be carried in very compact and easily accessible form.

In this way the stock is kept in neat order; there is very little danger of stock becoming soiled or marked up on account of being moved around from one position to another, and there is always the added advantage of knowing where to go when looking for reserve stock of any line.

May Bros.' store has been planned out along definite practical lines and there is no indication of any effort having been made to introduce any innovation which is not of real practical value.

The selection of stock, the arrangement of stock, the placing of departments, have all been carefully planned with a view to giving the customer the best possible service.

Prices in Plain Figures

Another feature of May Bros.' store is that all goods are priced in plain figures, and wherever possible the price is shown as prominently as possible for the customer's benefit.

There is only one price in May Bros.' store and that is the price which appears on the goods. The customers have learned to regard this price as the one and only price, and in this way their confidence in the store has been greatly strengthened.

It has always been the policy of Mr. May to keep his price records as complete as possible and he not only has the prices shown on the goods but also has duplicates in the way of special cards or labels with information as to price attached to the various compartments in which the goods are stocked. This is not always possible owing to the nature of some classes of goods, but wherever possible and practicable it has been carried out.

Special provision has been made in the way of a pricing file where salesmen can find prices on a great many of the special lines such as are often called for in a hardware store.

For instance under the heading of handles, prices are shown for extra handles for wringers, carpet sweepers, hair brooms, dustless mops, and many other handles for which a call is frequently made by customers.

The same policy has been followed out on a great many other special lines. In many hardware stores when a special line of this kind is required it is necessary for the clerk to consult the proprietor or secure a special price. In this way Mr. May has made provision for the sales staff so that on practically all specials they are in a position to quote a price promptly.

Office Equipment Complete.

One of the features of May Brothers' store is the complete office equipment. The office is located at the rear of the store on a mezzanine floor, entrance being by way of a stairway from the left-hand corner of the store at the rear. The office equipment consists of filing cabinets for invoices, a cabinet for keeping catalogues of various hardware concerns, adding machine, two telephone lines, manager's desk, bookkeeper's desk, safe. The office is so located that a view of the store can be had at all times. Cash carrier wire lines connect the office with the store below. These lines, however, are not used as a cash system, for the cash is placed in the registers on the store floor. The carrier system is kept only for convenience in sending bills and such like from the store to the office and vice versa. This carrier system saves considerable time and numerous trips. One of the valuable fixtures of the office is the adding machine. The bookkeeper, gives unstinted praise to the adding machine. "It is most valuable at stock-taking time. It is a great time saver. There is no chance of a mistake. It can be depended upon absolutely. For it will add, multiply and subtract with even greater accuracy than the human machine. It is also invaluable in making out the cost of goods," said this young Woman.

Customers Take Pride in Store.

May Brothers were warned by certain doubting Thomases that they might make their store too complete in its appointments and so scare away a certain class of trade who might consider it "too nice." "Our customers have taken as much pride in our store as we have ourselves," stated Mr. May. "They recognize and appreciate nice things no matter how humble their station in life. They have always been made to feel it is their store and that it is because of their patronage that we have been able to cater to their wants in the manner that we have. Our trade has undoubtedly increased because people have been attracted by our displays, equipment and fixtures and because we try to give them service and at fair prices."

Sale of Gasoline Brings Other Trade

Western Hardware Merchant Buys Gasoline in Carload Lots and Sells as Impetus to Other Trade—Helps Accessory, Bicycle and Automobile Sales, all of Which Are Handled—Doukhobors and Other Nationalities Now Drive Cars

BUYING gasoline by the carload is not an attractive proposal in some parts of the country, but there is at least one merchant who has found it to be useful in the development of his business.

Hallson's Hardware is located in the town of Kamsack, Saskatchewan. The district is a fertile one and the settlers have made good use of the soil to grow crops that need only to be planted properly and cultivated reasonably well. Returns are nearly always satisfactory, and in view of the fact that fertilizer is not needed to a great extent the farmers have been able to cultivate a great deal more acreage, and in the recent years of high prices to make themselves prosperous and often independent.

There is no tank storage at Kamsack. Of this fact Mr. Hallson has taken advantage, and for the past two or three years he has been taking care of the growing demand for gasoline in the town and throughout his district.

It is generally agreed that the margin on gasoline sales is small and this is the case here. Notwithstanding, when it is considered that not less than six carloads were handled by this firm last season, it is readily understood that a big opportunity has been embraced to sell the farmers and others calling for this commodity their other wants in hardware.

The gasoline is brought in in steel barrels, and as there is a full space of two lots owned by Mr. Hallson and an additional space adjoining, plenty of accommodation is afforded for the care of a car lot as brought in.

Doukhobors in Canadian West are now enthusiastic car drivers. Above picture was taken on main street of Kamsack, Sask. Two years previous these same young women were photographed while pulling a plow.

Auto Accessories Carried

In addition to a stock of electric fixtures that is maintained in good variety, and for which a good sale is secured, Mr. Hallson is gradually adding to his stock of automobile accessories. These are selected to meet the peculiar needs of the district, and a representative variety is stocked at all seasons, and especially

View of paint department in Hallson's Hardware, Kamsack, Sask. Note the accessibility of the display, together with the arrangement of color cards and painted paddles to show colors.

Interior view of Hallson's Hardware, Kamsack, Sask. Present demands of business have convinced the proprietor that he must have more room for his stock. Building operations are contemplated this year.

when the demand is at its best. Kamsack has been prosperous during the past few years and the farmers have been prompt to improve their position. In special evidence is the automobile, and this is true of the rural population in particular. It naturally follows that there is a demand for accessories, and the management has been careful to watch the trend of customers' wishes that stock may be selected to meet with ready sale.

Has a Line of Automobiles

For the year 1917 a well-known line of automobiles was handled, and while the sales were not so numerous as they are expected to be this season a good start was made. "One of the difficulties," said Mr. Hallson to HARDWARE AND METAL, "is to get the goods, but I have found that my needs are well looked after by the big houses, and in view of all the troubles that jobbers have had we are well taken care of."

A different line of automobiles will be handled this year and sales are expected to be increased over those for 1917. When HARDWARE AND METAL'S representative called, Mr. Hallson had not yet decided what line he would handle for the coming season.

Reference to the accompanying photograph will serve to indicate the variety of trade which is served here, even to such a modern convenience as the automobile. The occupants are seated in their own car and all are Doukhobors. The young lady at the wheel is quite as capable of running a straight course and turning corners as are the men folk. By way of contrast it was pointed out that these same women had been photographed not more than two or three years ago pulling a plough over the farm, after the native custom in their European homes.

This photograph was taken on the main thoroughfare of Kamsack, which has quite a metropolitan appearance for a Western centre.

The Long Distance Sign

As the representative of HARDWARE AND METAL walked up the main street of this thriving town he was attracted in a particular manner by the long-distance gasoline pumping outfit that stands in front of the store. This was made more effective because of the width of the street and the outfit is a modern one with a glass-topped dome. It is an attractive drawing feature and for transient as well as for regular trade it must be a constant reminder of where to stop for gasoline and accessories.

Expects to Sell 40 Per Cent More Bicycles

"During the year 1918 I expect to sell 40 per cent. more bicycles than in 1917," said Mr. Hallson. This indicates very unmistakably that there is a healthy interest in cycling "out West," and that there is really a revival of this old-time healthful exercise. Of course it is as well true that many are now using the bicycle for business and other practical purposes.

Stimulants to Trading

Mr. Hallson stated that he had experienced some trouble with a rather serious amount of opposition as represented by foreign-born storekeepers. It is notable in this part of the West that there are scores of storekeepers who know little or nothing of merchandizing, or even our language, and they are consequently a difficult class of opposition, especially so as they know so little of values and of what a given commodity shoud sell for. But this has not proven to be an immovable obstacle, and the Hallson Hardware has maintained a large turnover by being on the job all the time and giving good service.

"I aim to give good service, and in the matter of goods that are asked for and which may be special or of which I have run short I have made it a principle to send for at once and get in by express. I may not always make a great deal on a sale of this kind, but I have found that this service to the customer is a good investment and pays in the long run." Such was Mr. Hallson's view of one phase of service.

Toys Have Been a Success

Toys have been sold here for some time past, and at the Christmas season in particular they have been a splendid line and a good stimulant to business. It is not essential that a large stock be carried, but a good selection can be sold with profit and other trade stimulated for the regular lines that are inclined to drag as the season advances.

These are carefully displayed where the customers can see them readily, and the windows are also used and serve as a useful index to the stock within the store.

As one of the advertising features adopted and found successful here, the slides that manufacturers have been providing for the use of the trade are used to good advantage in the local movie theatre.

The Hallson store is well located but the demands of the business have convinced Mr. Hallson that he must have more room and better display for his stock. It speaks well for the condition of trade here. Owing to the fact that the present property is owned by Mr. Hallson he will erect his new building on the corner immediately adjoining, and expects to complete his new premises during 1918.

Why Not Double Your Business?

A Big Field of Work in Metal Roofing Which is Not Properly Cultivated—Suggestions as to Starting and Working up a Business — The Conservation Aspect of Fireproof Roofing—Bigger Business Ahead for Man Who Gets in Ground Work Now

By G. G. Complin, Sales Manager Metallic Roofing Company of Canada

THERE is a line of goods properly affiliated with the hardware and tinsmithing trade, which in the majority of cases is sadly neglected, but which is capable, with a little effort, of more than doubling the business of 75 per cent. of the members of these trades. That line of goods is metal roofing—more particularly metallic shingles and tiles. Perhaps the fault for this neglect lies with the manufacturers, or perhaps with the trade, but in any event, a little light on the subject should help to improve matters.

The roofing trade of Canada has, so to speak, been only scratched by metal, as yet. Here and there are tinsmiths who have taken hold of metal roofings, and have recognized them as a staple part of their business, and their towns bear evidence of this by exhibiting metal roofs as the rule rather than the exception. But in the majority of cities, towns and villages, the roofing business has been graciously left to the carpenter and his kindling wood (wood shingles). And the tinsmiths have sat back satisfied with selling a little valley or ridge cap, or perhaps putting a trough around the building. If your town is in this class, make up your mind right now that an aeroplane view in 1923 will show there is a tinsmith there wso can do something besides spike eavetrough and spill solder on leaky pots.

Enormous Field for Trade

Have you any idea of the number of squares of wood shingles laid every year? Statistics are dull and this is no arithmetic lesson, but I just want to tell you that when the tinsmiths of Canada capture just one-quarter of the business which is now going to wood shingles it will mean an average of thousands of dollars every year to each one of them! Just one-quarter, mind you, and this is speaking of wood shingles only, leaving out entirely paper, slate, asbestos, etc. There is surely big business ahead of the knight of the snips who realizes the possibilities of his trade.

And there are no difficulties in the way of accomplishing these possibilities either—no real difficulties, that is. What is needed principally is to let the people know that a better roofing is to be had right in their own town—from you. There is no shadow of doubt in my mind that so soon as people know that their local tinsmith lays metallic shingles as well as they now know that he puts up eavetrough and instals furnaces, just so soon will this roofing come into its own.

The Way to Start

Doubtless, Mr. Tinsmith, if asked, you would answer that you could furnish metallic shingles. You would produce a catalogue and perhaps you could dig up some dusty samples from behind the bench. This is perhaps all right for the customer who comes looking for it. But what is needed is to reach the man who is NOT looking for it—the man who drops in on his way to the lumber yard to buy wood shingles, or the man who to-morrow may commence a new building, or have his present roof burnt off by a spark from a chimney. In fact, everyone who comes near your shop should have a chance to see that you are in the roofing business and in it in earnest.

In starting to build up a roofing business, first decide on the particular make of metallic shingle you are going to push. And let it be one that you have confidence in, as you will never make a success of selling anything you cannot honestly recommend. Look into the construction and the amount of lap; see if a good connection can be made at valleys, and a shingle taken out and replaced, should necessity arise. Choose, if possible, a shingle with a reputation and advertising behind it. Take into account the ease or speed of laying, for this will affect your ability to compete on close price work when necessary.

Show Samples of Shingles.

Having decided on your shingle, put some samples in your window, and mount three or four on a sample board to be prominently displayed in or about your shop. If the maker of your shingle issues sign cards, use them liberally, or get a local signwriter to make you some cards, telling what your shingles are and what they are for. You would be surprised how many people will look at a metallic shingle and not know what it is, if no explanation is given.

When you have your next lot of billheads, envelopes or letter paper printed, put a line across the bottom like one of these: "When you need a new roof see me about Blank metallic shingles," or "Get my price on Blank metallic shingles for that roof." When your men are repairing an eavetrough, teach them to report if the roof is in bad shape, and if so, remind the owner you are in the roofing business. Then send his name in to your manufacturer for a letter and literature to be sent. Make a point of noticing the condition of sloping roofs as you go about town, and follow the same procedure.

Manufacturers Help Foster Trade

All this costs virtually nothing, so the question of expense cannot deter any tinsmith from at least going this far and it will be the means of making a start. It is desirable, of course, to go further. For instance, if you regularly carry an advertisement in the local paper, your line of metallic shingles could be mentioned at no extra cost. When conditions warrant it, special roofing advertisements should be run showing cuts, which your manufacturer will always be glad to loan.

Local advertising by a dealer of a product nationally advertised by the maker forms an important link in a sales chain. It brings the goods nearer home, as it were, and reaches a large class of people who would drop in when passing your shop but would not trouble to write a letter to a manufacturer miles away.

I have suggested choosing just one make of shingle to handle, and I believe this is right. "No man can serve two masters," and boost hard for both of them. If you show a customer a num-

View showing adaptation of metal shingles to modern dwellings. The above is a photograph of an actual building. Danger from loss by fire has been eliminated so far as sparks from chimney is concerned.

ber of different kinds of metallic shingles of widely differing types, there is the possibility of confusing him, creating doubt in hs mind, and finally having him fall back on some roofing that he knows more about. Pick your shingle, study the sales literature of the maker, and work up a line of talk that will leave no doubt in your customer's mind that your shingle is the right roofing for him.

Competition Helps.

Perhaps your opposition will pick out another make of metallic shingle and start in to boost it. It is to be hoped he does. You will then have his assistance in jolting the general public out of the wood shingle rut, and you will find his competition a much less serious obstacle than the present lack of knowledge of metal roofing in general.

The fact of your boosting one shingle and your competitor another is quite a different story from your handling both kinds, and is not likely to create the confusion or doubt just referred to. A customer knows that it is only natural for any dealer to talk up his own goods, but if you lay down three or four different shingles in front of a man who knows nothing about them and say, "Take your pick," he is very liable to say, "Well, if a man in the business doesn't know which is best, how can I expect to tell?" Concentrate on one shingle—the one you consider best, and you will get results.

Of course there are other metal roofings besides metallic shingles, such as tiles, corrugated, standing seam, etc. These could be pushed as well as shingles for the classes of buildings for which they are suitable.

Corrugated Iron Easy to Lay

Corrugated iron is a product which is so easily put on that the bulk of it is laid by other than tinsmiths. While you should be in a position to furnish it, still there is not the same advantage in pushing it as there is in the kinds which require a little more skill in laying. The kinds that should be pushed hard are the shingles and tiles for sloping roofs and standing seam for flat roofs.

Spanish Tiles Reproduced

Spanish tiles make one of the most handsome and attractive roofings to be had for pitched roofs. Manufacturers can furnish a reproduction in metal of this form of roofing, which is practically indistinguishable from the real tiles. The metal has several distinct advantages too in that it is much lighter than the clay tiles, will not crack with ice or frost and can be repaired when needed at a fraction of the cost. Samples of these tiles should be prominently displayed and a few roofs laid in your district will undoubtedly result in a steady trade being worked up for the better class of residences, public buildings, etc.

These tiles are now made in clusters, twelve tiles embossed on one sheet, and thirteen sheets laying a square. They

View showing type of building for which metal shingles are being used. There is a big field for the hardwareman and tin smith to develop in the sale of these goods.

can be laid almost as fast as corrugated iron—some difference from the old 9 in. x 11 in. tiles, which kept a man working hard all day to lay a square. There is no need, of course, to explain all this to a customer, and he will doubtless be agreeably surprised when you name him your price, notwithstanding you have allowed for a good profit. Valleys and hips take some extra time, and these should be carefully taken into account when figuring on a job.

Patriotic Side is Conservation

No magazine article is complete these days without lugging in something about patriotism or conservation. You are doubtless looking for it, so I should not like to disappoint you. Besides, it brings us to a very strong selling feature of metal roofing, namely the conservation of property and goods by the prevention of fire.

Insurance statistics prove that a very large percentage of fires in various classes of buildings originate on the roof, either from chimney sparks, lightning or flying brands from other fires. The National Fire Protection Association is authority for the statement that wood shingles are the greatest single cause of fires in North America, and that on an average of once a day in Canada and the United States someone's home is destroyed or the roof burnt off by the ignition of its wood shingles by sparks from its own chimney. Canada's fire loss last year was $55,000,000, or over $6 per head. These startling facts gave excellent grounds for the arguing of metallic roofing from the standpoint of conservation. Canadians for many years to come are going to have much more sensible use for their money than spending it on material for bonfires to be built on top of their buildings.

The Time is Ripe—Right Now

On account of prices being high you may say that you will not tackle metallic roofing in earnest "just now," or "during the war." If you say this, I think you are making a mistake for two reasons.

In the first place, quite a fair quantity of metallic roofing is being sold right now, and you can sell it as well as others. There are a lot of big firms engaged in making metallic shingles, and I have not heard of any of them going out of business for "just now," or "during the war." They may not be doing as much business as formerly, but they are carrying on and holding things together for the big future business which is surely coming.

The second reason is that it is human nature to judge the merit of an article by its price. You will undoubtedly quote some customers whom you cannot sell just now, but they will go away regretting that such a fine roofing is out of the reach of their pocket, and inwardly resolving that if ever they can afford it they will certainly have it. Later on, when you are able to quote lower, these people will be already "sold," and all you will need to do will be to write down their order.

Work Is Being Deferred

I have referred to the bigger business of the future, which is surely coming. Everyone in touch with the building trades knows that only such new work or repairs as are absolutely necessary are being carried on now, which means that a very considerable volume of work is being deferred until materials and labor are easier. When this volume of work comes on it is important that you should already be known as headquarters for roofing, so that you will not have to start to-day.

In conclusion, let me repeat that there are immense possibilities ahead of Canadian tinsmiths who take a real hold of the metal roofing business—possibilities which are by no means difficult of attainment, and which have already been attained to a great extent in certain places. I think I can safely speak for most of the manufacturers of these products when I say that they are ready and willing to back you up and assist you in every reasonable way in pushing metal to the fore, and in building up a trade which will not only be highly profitable to you, but which will result in raising the Canadian standard of roofing to a level more in keeping with modern ideas of building for permanence and safety.

Methods of Increasing Paint Sales

With Building Operations at a Standstill, Ashdown Hardware Co. of Calgary, Alta., Does Increasing Business—Carries a Complete Line of Regular Products and Specialties—Every Kind of Brush—Advertise Well

FROM a dingy and crowded space, devoted to the sale of ready-mixed paints and varnishes, the J. H. Ashdown Hardware Co., Ltd., Calgary, Alta., has so developed this department of its business as to require for its display and sale at the present time 2,000 square feet wall and floor space, exclusive of space required for surplus stocks. And they have made this department one of the most inviting and brightest, as well as one of the most profitable, through the adoption of up-to-date methods and the carrying of a comprehensive stock.

Three floors are necessary for the display and sale of this departmentized hardware store's many lines. The paint department occupies part of the second floor, and it has been so placed as to ensure a goodly amount of light as well as an unobstructed and exclusive position.

A manager and assistant are required, and the buying is in the hands of the department head, who is required to carefully check his stock daily, and to keep the many lines complete at all times.

Large Percentage Women Buyers

It is a fact worthy of note that a great percentage of the patrons coming to the Ashdown store for paint and specialties are women. This is indicative of the growing interest that women are taking in the purchase of a line of goods which formerly was of little interest to them. So many now do little jobs around the house themselves, and here the interest displayed by women buyers is very marked indeed.

Generally speaking, the women buy specialties. Among these the popular lines are varnish stains, aluminum paint, varnishes, flat tone colors, floor finishes, prepared glues, floor mops and many other lines. By devoting particular attention to the cultivation of just such trade this firm has made its paint department one of the largest and most important among the eight or ten represented. Every care is taken to explain fully the particular advantage of a stain or varnish, and in this respect it has been found extremely important to impart little ideas that would never occur to an amateur, and without which knowledge the product, when applied, might fail to give really satisfactory results.

Stock Turned Three Times

In carrying a stock to meet the needs of their growing trade it is essential that this firm have a very fair investment. The buying is most important and kept at the minimum by the close and careful checking that is constantly exercised. This is, as a matter of fact, an element of good business, and all lines are made to turn as often and as promptly as possible. Some of these turn more frequently than others, but all through there is an approximate turning of the paint stock three times a year. With the supervision and care that is exercised, the whole stock is made to carry a

View showing window display of J. H. Ashdown Hardware Co., Limited, Calgary, Alta. Note the emphasis on lines that should be good sellers throughout the year. Brushes of various kinds, color cards, paint paddles and various lines of cleaners form part of the display.

View of paint department in J. H. Ashdown Hardware Company, Limited, at Calgary, Alta. Section permits of 2,000 square feet of wall and floor space and makes possible an excellent display of these various lines.

very satisfactory margin of profit, and in this respect the paint department has made a good showing.

Package Goods Popular

"The popularity of a clean, neat and conveniently put-up line of specialties has grown very materially in the past few years. The sale of the widely-advertised lines of specialties is very large," said W. J. Illsey, manager, to HARDWARE AND METAL'S representative. "These are largely asked for and always sell better than those not so advertised."

Among the specialties that are carried and freely sold are polish mops, the sale of which has grown at least fifty per cent. They will continue to be a very popular article with the class of feminine trade served here. Package glues, chamois skins, polishes and polish cloths have had splendid sale. Flat wall colors have become quite a feature of the trade. Carriage paints, stains, varnishes in all sizes up to half gallons and paint removers have each become more popular as their use and advantage became more generally known. And there is a good demand for wall colors, too, thousands of pounds being sold annually. White lead in small tins, wood fillers, shellacs and many other paint specialties are carried. In addition to these such package goods as stove and shoe polishes, knife polish, polishing cloths, wax and bronzing liquids are sold.

For the heavier and bulk goods such as putty and white lead in oil, step and extension ladders, dry colors, waste, whiting, etc., space in the store basement is allotted. And for the various lines of paint oil and turpentine, self-measuring storage tanks are used with the extension pump outfits, all muss and wastage thus being reduced to the minimum.

Big Stock of Brushes

"We aim to carry every kind of brush whether a big demand or a small demand exists," said Mr. Illsey. In this the firm has shown its initiative by stocking a very fine line of brushes. These are of every description, and comprise flat and oval wall brushes and kalsomine brushes of many sizes, with a comprehensive showing of varnish brushes, the qualities carried being suited to the requirements of the amateur or the master painter. Stencilling brushes, camel and sable hair brushes of many varieties are shown in big variety, making choice possible with little loss of time. The sign-writer, the house-painter and the decorator can each satisfy his desire here from the full lines displayed. Aside from these, such specialties as floor waxing brushes and floor brooms are sold.

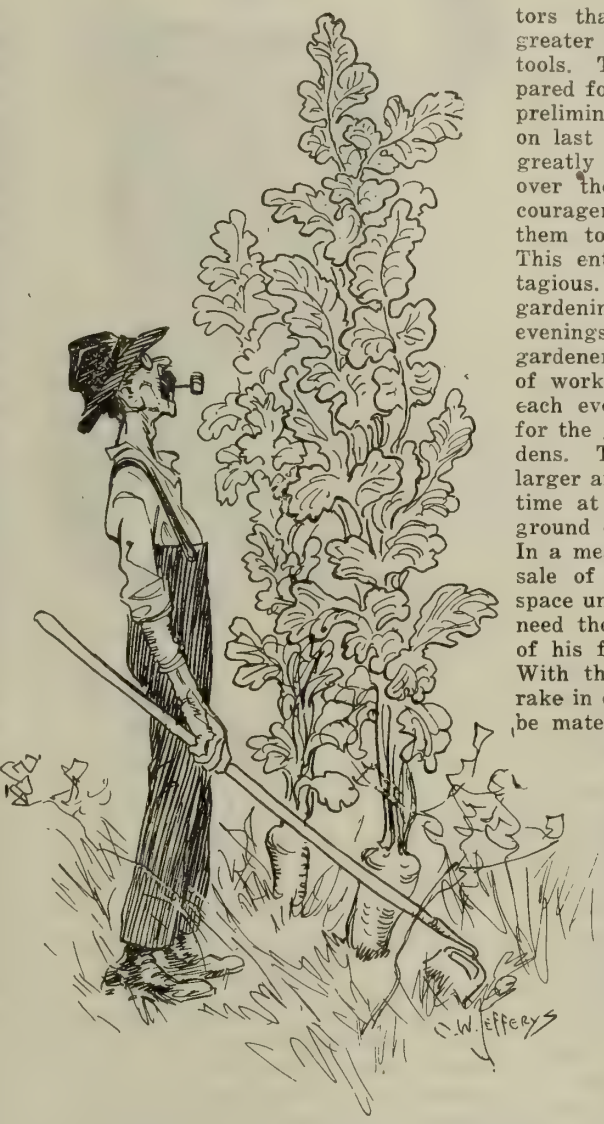
In addition to the foregoing, a good showing is made of special requirements for the glazier, and he may purchase a diamond for glass cutting, or the other substitutes which give good satisfaction. Putty knives, rules, circular glass cutters and the special tools wanted by the paper-hanger can be had here in complete variety.

For the brush stock a special use has been made of the space that would have otherwise been lost, close to the elevator. This has been enclosed so as to make a dust-proof cupboard, and all brushes are here kept in their original condition, free from the usual deterioration that would otherwise result.

Advertising to Make Sales

There is one outstanding feature here. The Ashdown company makes constant and judicious use of the daily papers to advertise the advantages of its various lines. One line is advertised at a time. Thus, in the event of an advertisement being run to stimulate the sales of painting products, that advertisement confines its argument to paint and painting materials only. In this way the reader's attention is centralized and the argument is sent straight home. The best feature is that this advertising pays. For some years it has been an outstanding essential that newspaper space shall be used to keep the firm's name and its

(Continued on page 124.)



To Improve Sale of Garden Tools

Daylight Saving And Campaign For Production Should Mean Bigger and Heavier Trade Than Ever in Tools and Implements—Hardwareman Can Encourage Production by Pushing Sales of His Lines

THE hardwareman can this year do a greater patriotic service than he did last year by pushing the sale of garden tools. Such a service will not be entirely unselfish for it will mean a bigger trade in his wares. But, while urging the sales of garden tools he is at the same time accomplishing what is most to be desired, namely, that a larger number of people should take up with the gardening idea this year. There was a fine response last year to the call for production, and hardwaremen were greatly benefited thereby. With the enthusiasm engendered last year there should be no trouble in fostering it still more during the coming season. All the amateur gardener needs is the right sort of encouragement. This can be furthered in a very material way by the attitude assumed toward the project by the hardwareman. If he does his best in every possible way to bring the necessity for production before the people his influence will count for more than perhaps any other factor. He is the man who is on the firing line, and forms the point of contact between the appeal on the part of the Government and the actual producer, who is going to make that appeal stand for real production. His quiet influence can be exerted in no unmistakable way. His enthusiasm for the proposition will go a long way toward giving it the necessary impetus that will send the people to their fields and backyards again this coming spring. That enthusiasm will be supplied through the aggressive way in which he advocates production. His advocacy will take the form of displays of gardening tools both in his windows and in his store interior, together with advertising in his local paper or in the shape of window cards or handbills.

Daylight Saving Looks Promising

There is every prospect that there will be an added impetus to gardening this year by reason of the daylight saving idea. There is every probability that this will be made effective throughout Canada. The matter will very likely receive the attention of the Federal Parliament when it assembles this spring. Sir George Foster has given his promise that the matter will be introduced into Parliament in the form of a bill to be effective throughout Canada. This will be all the more necessary this year because the United States has taken up with the idea and the matter will, without doubt, soon receive the sanction of Congress. It will be made more necessary in Canada when it is adopted in the United States because of the close business connection between the two countries. It would make it inconvenient for the big business houses in Canada to start an hour later and keep open an hour longer than those in the United States. The daylight saving scheme has already been adopted in Great Britain and France. It is only logical to suppose that Canada will not be behind in the march of progress. Inquiry from some of the leading business men in various parts of Canada indicate there is an overwhelming sentiment in favor of the scheme when it is adopted in a national way.

Visions of glorious growth. "Talk about Perduction! I never did see a parsnip perduce like that ding-busted plant."

Link Up Advertising to Scheme

The hardwareman will have an excellent opportunity to link up his advertising of garden tools to the daylight saving scheme and to the campaign for greater production. These are two factors that are naturally pulling for a greater trade than ever before in garden tools. The ground is already well prepared for the hardwareman through the preliminary campaign that was carried on last year. Amateur gardeners were greatly encouraged in most instances over the result of their labors. Encouragement thus received will cause them to be enthusiasts over the idea. This enthusiasm will no doubt be contagious. One of the big drawbacks to gardening last year was the fact that evenings were far too short to enable the gardeners to get in a satisfactory amount of work. With an hour more daylight each evening there will be ample time for the gardeners to spend in their gardens. This should work out toward a larger area being cultivated. With more time at their disposal a bigger plot of ground can be placed under cultivation. In a measure this will help increase the sale of garden tools. With a larger space under cultivation the gardener will need the help of the younger members of his family in order to cultivate it. With the sale of an additional hoe or rake in each family the sale will thereby be materially increased.

Advantage From Health Standpoint

The hardwareman would be wise to dwell upon the advantages of gardening from a health standpoint. In his window advertising either through show cards or displays, as well as in his newspaper advertising, he can dwell upon the health feature of gardening operations. A man will undoubtedly be better physically if he goes home from his office or his regular line of employment and gets into the garden for a couple of hours each evening. He will find a better appetite and a keener through the watching of his interest in things in general growing things.

Production is Needed

The most potent argument, however, is the central one, namely, production. That is the appeal that should be made to every householder. From all appearances the food supply is going to be still more restricted by next winter than it has been this winter. Millions of men cannot be taken from productive pursuits without a falling off in production. It may be that we will have to get back to the simple articles of home production before this war is over. Potatoes, carrots, onions, beets, cabbage, parsnips—all these are good things to eat, and we will never go hungry so long as we have a plentiful supply of them. These commodities can be produced right in

our own backyards. Their supply cannot be cut off through the depredations of the submarine. The hardwareman feels genuinely that this production is urgently needed. When he has this conviction it becomes an easy matter for him to go after the sale of garden tools in an energetic manner. Any production that he can bring about through the medium of his aggressive business methods is doing a real service to the country as well as a service to himself. The hardwareman should feel absolutely convinced on this point.

Seeds as Feeders

The encouragement of the planting of seeds is a necessary adjunct to the sale of garden tools. The encouragement to the planting of seeds is of course to be given through the display of seeds and the advertising devoted to same. One Toronto hardware dealer made a strong selling point last year by having some of the seeds growing in boxes in his windows. Seeds that have every evidence of being likely to grow will induce the prospective gardener to buy far quicker than those about which he is in doubt. This planting of a few seeds gives a touch of color to the advertising that brings a breath of the real garden into the hardware store. When a customer has been led to invest in a few seeds the next need will be the implements with which to work his ground.

Reminder Through Displays

Another attractive way of encouraging the production idea and hence the sale of gardening tools is the timely display of articles used for gardening. Hoes, spades, rakes, garden hose, watering cans—all have the power of suggesting the need for their use. Window displays are, of course, the most effective method. But store interior displays are equally necessary. Furthermore, it is necessary to have salesmen who are keen on pushing the sale. A lead taken by the hardwareman himself in gardening operations is a potent factor toward encouraging others to join in. Example is better than precept. In this he can possibly join whole-heartedly in any community scheme to bring vacant lots under cultivation. Some districts are even going into the production on a more extensive scale this year, and are making it a club affair to co-operate in getting a piece of farm land on the outskirts of the town.

Advantage of Experience

The hardwareman who has had some experience in gardening will be able to turn his knowledge to good advantage to assist those who will perhaps get under way for the first time this season. Any advice thus given will perhaps be welcomed and will encourage the less confident one to undertake some gardening operations. The hardware store should be the centre whence the necessary enthusiasm should radiate this spring that will make production of food products possible on a larger scale than ever before. And the hardwareman will find that any effort he puts forth will come back perhaps a hundredfold in the shape of trade.

What "father" will look like after a long evening spent in the garden under the daylight saving scheme. But it will be good for him. A workout will reduce his avoirdupois.

METHODS OF INCREASING PAINT PROFITS

(Continued from page 122.)

policy and wares constantly before the public. To further emphasize this advertising and to take full advantage of it, the display windows are made to contribute to the publicity of the products specially advertised by careful displays of the goods advertised in a given week.

In view of the fact that Calgary, in common with many other parts of Canada, has suffered a quiet condition as pertaining to the building trade, it is noteworthy that the Ashdown Company has been able to maintain and to even increase its turnover in the paint department.

The Store Arrangement

This is due undoubtedly to the aggressives sales programme followed by this firm, but it might be well to draw attention to the very neat and attractive arrangement of shelving on which all package lines are displayed. The photograph accompanying illustrates this department splendidly, and there is no question of doubt but that the care exercised in keeping every line in its place and the cans faced with the edge of the shelving does a great deal to back up the window displays, the newspaper ads. and close sales for the lines so advertised. It is quite true that salesmanship plays a most important part in getting goods over the counter, but with an arrangement of goods that is neat and compels attention, this work is more effective.

Window Displays Help

Not only are house paints, some of the specialties and varnishes included in the window display reproduced herewith, but lines closely related and sold from this department are emphasized. This is apparent in the showing of paint brushes, kalsomine brushes, floor brushes, dust mops, furniture polish, metal polish, etc. It is too often taken for granted by the retailer that the consumer knows he has these lines. Perhaps the consumer does, but by seeing them in your window or in a prominent place in the store he is reminded to buy from you rather than some one else. It will be seen that price cards are used freely, and this is one of the strongest points of the window.

The newspaper advertisements carry illustrations which serve to brighten the space wonderfully, and no mystery about prices exists, as these are quoted freely. There is no reason why the paint department should not enjoy great activity in every hardware store and by hammering away hard results may be expected to show as they have with this far western firm.

$9,000 WORTH OF BUSINESS ON DOLLAR DAY

(Continued from page 109.)

While the sale chiefly affects small lines of hardware, as indicated, a special reduction of $1 is offered on the price of stoves for Dollar Day. These sales during the past four years have not been conducive to big results in the way of stove selling though the special offer of Lindsay hardware merchants applies equally to stoves, ranges, heaters, furnaces and oil heaters. Experience has proved that the chief benefit from Dollar Day sale is in setting apart one day on which townspeople and those from the outlying districts will be impelled to come to town to take advantage of the bargain prices and play a part in the general enthusiasm which pervades every individual and every merchant on the big day of the year.

Evidence of the interest taken in the sale is found in the fact that of 13,000 coupons issued to the merchants of the town, 9,000 were turned in to the local newspaper office where they were well shuffled and the lucky coupons drawn forth. On the basis that each coupon represented $1 purchase this result would justify the most sanguine expectations for the Dollar Day sale, representing as it does that purchases of $9.000 or more, were made among the local dealers in one day of business. This is indeed a record for a town of the proportions of Lindsay and indicates that in this instance Dollar Day is an event of great importance to the local merchants.

Price Cards Help the Salesmen

Salesmen's Work More Effective With Less Effort if Goods Are Priced — Increase Value of Window Display—Inquiry Reveals This Fact—5 and 10 Cent Tables Examples of Success of Use of Price Cards

WHY do many hardwaremen to the detriment of their own trade neglect or refuse to place price cards on the articles they display in their stores and windows? Can it be that they are not convinced of the fact that their chances of making a sale of a priced article are, to put it moderately, at least twice as great as with the same article on which no price is shown? Do they imagine that by not exhibiting a price they will induce the prospective customer to come in and make the enquiry and that they will then have a better opportunity of making a sale? Or do they believe that the average customer objects to the general public being made familiar with the price of the article he is purchasing? Taking the latter idea first, there is this much to be said for it, that in the case of a dry goods merchant selling ready-to-wear clothing or millinery it might have some show of reason. Mrs. Jones may object to be seen in a costume which all her friends will recognize having seen in Messrs. Togemup's ticketed at $24.95. Or Mrs. Brown may feel some diffidence in showing off an article of headgear which the feminine portion of the community will at once remember as an attractive display feature of Messrs. Chapeau's recent spring millinery show marked at $6.98.

Exceptional Cases Are Outlined.

It is not our purpose here to pause and enquire whether these ladies' aversion to publicity in the matter is due to the fact that they may have considered the articles referred to a bargain at the price and would have liked them to pass for having cost more than they really did, or whether their reluctance to wearing priced goods would have been equally strong had those prices been far beyond what any of their friends would have been able to pay. Suffice it to say that in such cases there would be some justification for the dry goods merchant refraining from publicly marking the price of his wares.

Argument Fails From Hardwareman's Standpoint.

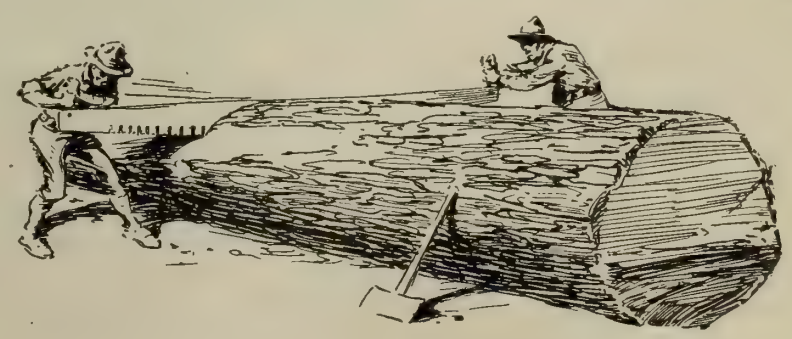
In the case of the hardwareman, however, this argument will not apply. His goods are not articles of apparel but are as a general rule articles which are used in or about the home, and except possibly in the case of such articles as might be purchased to give away as presents no objection to the price being known could possibly arise.

Goods Not Marked to Bring in Customers.

Let us then take the other suggestion—that the article not being priced may lead the customer to come in and enquire the price. This may be true of the man who has practically decided to purchase and who would have come in in any case whether the article were ticketed or not, but this is not the man you wish to get by your window display. The man you wish to secure as a customer is the man who when he started out had no intention of purchasing, but who, on seeing the article displayed, recognized his need of it or his ability to make use of it and, finding the price within his means and reasonable, decides then and there to buy. How many men thus situated would take the trouble to enter and make an enquiry as to price? Is it not natural for a man to feel that the price may possibly be higher than he expected, in which case he would have to leave without making the purchase. It is an undoubted fact that many men, and women too, feel that way in asking the price of an article. They feel that the fact of their not purchasing is equivalent to an expression of opinion that the price is too high. In actual experience it frequently happens, however, that the price is actually less than they expected and less than they are willing to pay.

Lack of Price Cards Delayed This Purchase.

The writer has in mind a case in point in which a hardware store was making in one window a feature of children's toys. For several months a nearby resident was continually passing the store with his little girl, to whom the window display was a source of great attraction, and she frequently asked for one particular toy. As no price was shown, however, and as her father was under the impression that the toys were somewhat expensive, it was some time before her persistency gained the day and an enquiry was made as to prices. Much to his astonishment, the father found that the cost of the various toys was not much more than half what he expected they would be, with the result that the child was made happy forthwith, and since then has been a regular recipient of toys from the store. In this case the eventual result was satisfactory to the hardwareman, but how many sales may he not have missed by people who might have bought had they known the prices, but who would not go out of their way to enquire.



Increasing Effectiveness of Window Display.

Of course a store's regular customers would show no diffidence in asking prices, and to the merchant who is content with the customers he already has and has no wish to extend his trade it may not be so necessary to price goods as it is for the go-ahead man who is desirous of adding to his clientele. But the show window should be one of the hardwareman's chief agents in securing fresh customers and if he exhibits goods therein without showing any prices he is neglecting to make full use of it to that end. For every one person who will enter to enquire the price of an unmarked article there will be at least five persons who would feel interested to know the price but who will not take the trouble to enter the store specially to find out what it is; and the merchant thus misses five chances of securing a fresh customer for every one chance secured through not marking the price.

Statement Based on Inquiry.

This may seem an arbitrary statement but it is based upon enquiry made of 25 different people as to their attitude in such a matter.

The question put to these 25 persons was: "Supposing you saw in a store window an article of which you were not in actual need but which you would like to have, and no price were marked on it, would you go in to enquire the price?" Of the 25 replies only two were a direct "yes"; four were doubtful and the remainder, variously expressed, amounted to a negative. Extended enquiry would no doubt produce

replies to the same effect in about the same proportion.

5c, 10c, 15c Tables Examples of Success of Price Cards.

A lesson may well be learned from the department stores in this respect. Consider the number of small household and cooking utensils sold at any price from 5c to 25c. In the department stores they are displayed on tables and ticketed 5c, 10c, 15c, or whatever the price is, and any woman walking through the department will invariably notice at least two or three articles which she needs, and in the majority of cases will stop to purchase them. But suppose they were not price-ticketed and it were necessary for her to enquire the price, the chances are that she would pass them by. And the point for the hardwareman to notice in this connection is that he can sell all these utensils at the same price as the department store and make a good profit out of them. Occasionally the department store may mark one particular article down to draw attention, but this is quite exceptional. The great majority of articles of this nature sold bear their full margin of profit.

Try It Out.

If there be any hardwareman who chances to read these lines and who is not in the habit of marking prices on his goods, let him make this experiment: Let him make a window display of small articles for domestic or kitchen use he has in his store with the price clearly marked for each article. Such articles as kitchen knives, sink tidies, funnels, bottle brushes and mops, stove brushes, sink brushes, potato parers, dust pans, stove brushes, toasters, tea strainers, corkscrews; these and many other similar small articles will make a goodly show. If they are properly displayed with their prices he will be surprised at the amount of trade he will draw, all extra business, and practically all dependent upon his clearly showing prices. Many hardwaremen are in the habit of making excellent displays in their windows but such displays are not always accompanied by a price card. If any such merchant happen to glance over this article let him just for once with his next display make the experiment of stating the prices of the articles exhibited. To the ordinary passerby the interest of a window display is increased fully one hundred per cent. if prices are quoted.

What has been said should be sufficient to induce the hardwareman who has not yet adopted the system of marking his goods to give it a trial. The advantages are many and the disadvantages, at any rate as far as the hardware trade is concerned, practically nil. It offers a prospect of a larger number of customers, an increased turnover, and enhanced profits. Give it a trial and watch results.

Turpentine Prices Show Decline in Year

Narrow Limit to Price Range—Curtailed Production Probable This Season—When Prices May Advance—Possibility of Greater Movement to Great Britain

ANOTHER year's activities in turpentine reveal little change over conditions prevailing twelve months ago and prices now being quoted are slightly lower than those recorded March 24, 1917, when turpentine was selling at 76c per gallon in this market. On March 16 of this year the price was 70c, which was a decline of 2 cents per gallon over the previous week, and 6 cents lower than twelve months ago. There has been little real price movement in this commodity which proves the exception to the rule that all lines under abnormal war conditions now prevailing must advance.

To give some indication of how little prices have fluctuated during the past year, and even since the outbreak of war, the following quotations at different intervals are given:

August 1, 1914	$0 67
July 31, 1915	0 61
November 15, 1915	0 75
March 15, 1916	0 77
June 15, 1916	0 64
September 15, 1916	0 68
November 10, 1916	0 70
March 24, 1917	0 76
June 2, 1917	0 75
October 13, 1917	0 71
November 10, 1917	0 77
December 29, 1917	0 71½
February 2, 1918	0 73
March 16, 1918	0 70

Narrow Limit to Price Range

Practically every other line handled by the hardware merchant will show greater variation than that revealed by the narrow limit set by turpentine. It is said that in the primary markets turpentine is selling below the actual cost of production and it is felt that much lower cannot be reached. The lowest point reached during the year is 1 cent higher than that reached during last year, but the highest price recorded so far this year is about 5 cents lower than the highest figures of last year. At the highest point reached in January and February of this year the price ruling in the primary market in Savannah was less than 6 cents below the highest price reached in January and February of last year.

As a matter of fact, prices on March 2 are the lowest that have prevailed in the corresponding week during the past ten years. Altogether the year reveals a very narrow spread in prices and explains the little change evident in local markets.

Curtailed Production Probable

That production will be greatly curtailed during the coming season is the view of authorities. Labor is short, has to be paid high wages and with the extremely heavy stocks on hand, it is thought producers will not care to increase their investment. A great deal of the output of turpentine in normal times is exported overseas, but with the shortage of bottoms now it is practically impossible to get any goods to these markets, and this will have a further tendency to limit activities. From May to August is the heaviest producing season in turpentine.

The tendency of future markets is hard to gauge. The demand at the present time is limited. An improvement in the demand will have a tendency to stiffen prices somewhat, but that lower prices will prevail is not thought likely.

When Prices May Advance

The close of hostilities is expected to mean an advance in turpentine. In the past practically one-third of the output has gone to foreign lands, and with the opening of this depleted market, there would be a tendency to influence prices upward. The requirements of the central powers alone would be such that great inroads on present stocks would be made and our allies have by no means been receiving their usual quota. In this connection, however, it is interesting to note that developments are under way by which it is expected a new method of purchasing naval stores for the United Kingdom is to be adopted. A new system of purchasing, transporting and distributing many classes of supplies seems inevitable, and although it is not yet known what form this will take it is thought the necessities of the British consuming trades may be provided for to a greater extent. The industries of the country must be nourished and sustained in a large degree in war times as well as peace, and it is hoped the needs of the paint, soap, varnish, paper and other lines using naval stores will be met to as great a degree as can possibly be done. If this new arrangement works out and the demand on turpentine is stimulated, some firmness to the market may be expected.

GOVERNMENT COAL INSPECTION

The United States Fuel Administration has announced the organization of an inspection system to enforce the mining of clear coal.

During the past winter much of the output of bituminous coal has reached the market containing a large percentage of slate and other impurities. The effect of this has been not only to reduce the heating value of the coal but to put an additional unnecessary burden upon transportation facilities.

Under the inspection system, coal condemned by the Fuel Administration for lacking preparation or because it contains a high percentage of impurities will be sold at 50 cents per ton less than the fixed Government price for the mine.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

MUCH has been said about the enormous fuel waste that is taking place in Canada, but with the exception of one or two authorities very little has been said as to how fuel can be saved. Some have advised how a furnace should be operated, and have given reasons thus and so. But oftener than not most of this information is only of value providing that the furnace is properly installed and of a proper size, also it has been assumed that chimneys and smoke pipes have been O. K.

It would be safe, however, to say that at least 30 per cent. of the troubles with heating systems is due to poorly constructed chimneys, and, in many cases, these can be remedied by adding a good type of chimney top.

A number of illustrations are here shown in connection with chimney caps and chimney construction. In our Canadian climate more care should be exercised when building chimneys. Many a furnace is installed that, do what one may, will never burn properly, and will not give off enough heat. When an extension to a chimney is made by adding a galvanized pipe as shown at A plate 23, it should be installed in such a way as to protect the chimney top.

Fig. C. shows how a chimney may be protected from cold and made much more effective if constructed in manner shown. It will be noted that where a chimney projects from the building line, at least one-half of the chimney is too much exposed, and particularly so when simply a single brick is built up on the outside.

An air space or asbestos coating should be by right inserted in such a chimney and it would result in better draft and less fuel consumption. Fig. D shows another design of chimney which is a very effective one, and one that is becoming very popular. It is a well-known fact that a round chimney is much more efficient than either a square or rectangular one.

Then again with a round pipe chimney that is smooth as well as furnished with an air chamber its effectiveness is greatly increased as stated before when an iron extension is placed on top. In this case there should be some protection for the brickwork, because winds and vibration caused by heavy traffic, etc., will very often cause the top layers of masonry to become loose. Fig. E. shows how a chimney may be protected.

Fig. F. is a full pattern of extension pipe shown in Figs. A and B, and is self-explanatory.

In conclusion the writer is of the opinion that one of the most important conditions precedent to a furnace being installed is to be thoroughly satisfied

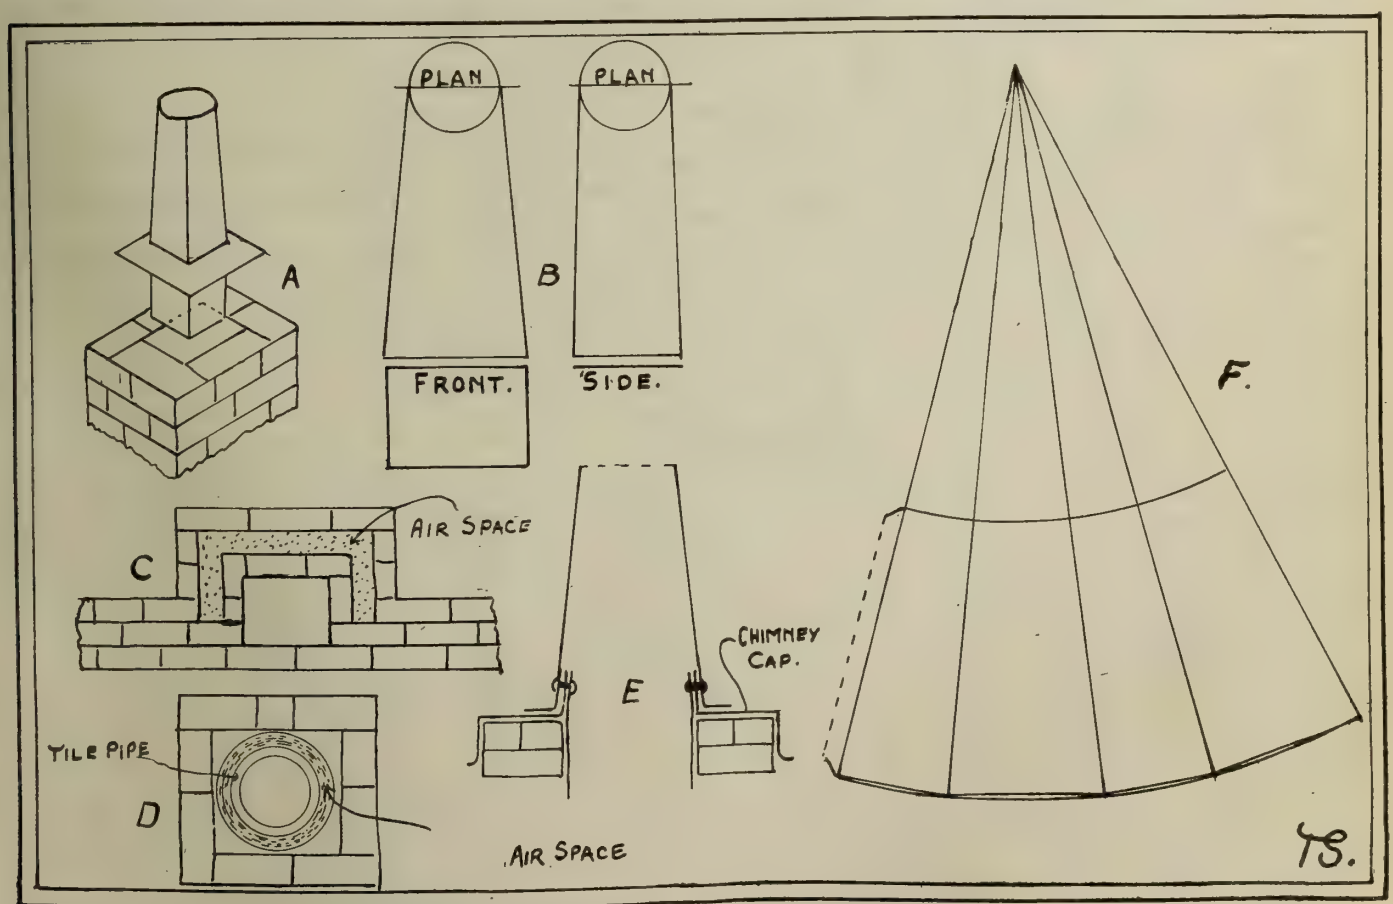


Fig. 1.

that the chimney is suitable for the furnace, and seeing that this work is done long before the furnace is installed, it is often necessary to decide upon the style of furnace before the chimney is built.

One very common trouble with furnaces, no matter of what kind, hot water or steam, is very often traced to poor chimneys. Sometimes they are not properly built, not large enough or have some obstruction at or near the roof.

Many times it has been found that a taller building has been erected possibly after the furnace has been in operation, or it may be that the taller structure was first built.

The chimney top here described in Fig. 2 and for which patterns are to be developed has proved very satisfactory. The first the writer constructed was required owing to the fact that a tall building was built nearby after the furnace had been in operation for several years, and up to that time had given splendid service. But when the taller building was erected trouble began.

Since then several of the tops described have been fitted up to existing chimneys, and have resulted in a great improvement.

The principle of this chimney top is that when a wind blows even against the taller building the draft is forced through the pipes AA either up or down and in any case this draft causes a suction on horizontal pipe B, and prevents a down draft. As to size the pipes should all be the same diameter.

In developing the patterns, the elevation and plan is first drawn as shown. Pipe C enters the chimney and may be fitted to a square to round piece which should not have less cubic contents than C.

Next divide plans of each pipe as shown into twelve equal parts, using only the four figures 1, 2, 3, 4, and repeating same. Next draw a vertical line DD, through centre of pipe C and B, which should be the true centre of the elevation. Now determine the diameter of chimney top. The length of pipes AA should never be less than three times their diameter, four times is preferable, and the distance between point E F should never be less than the proportions shown, say one and seven-eighths of the diameter with a pitch of about 60 degrees.

It will be noted that as all pipes are equal in diameter the eight mitres are all in the centre of each pipe, therefore, it would be well to centre each pipe, draw three half plans of A and B and full plan of C, then draw the mitres.

Next draw dotted lines through the half and full plans at points 1, 2, 3, 4, 3, 2, 1, cutting each mitre as shown, all lines of which must be parallel with the outlines of the elevation.

Next draw a vertical line as shown in Fig. C^1 and divide it off into twelve equal parts 1, 2, 3, 4, 3, etc., from these points draw as many horizontal lines. Next take the compass and transfer the measurements from line a b in pipe C, and mitre, C, B, to the stretchout line, Fig. C^1, cutting each of the dotted lines which bear their corresponding figures. By connecting these points the pattern for pipe C is developed.

The patterns for Figs. C^2 and C^3 are developed in a similar manner, as also are the holes in the various patterns. The one stretchout line can be used as in the case of Fig. C^1. Allowance must be made for joining the mitres, but the pattern of the hole is well to be cut a little small at first, because it can always be fitted, whereas if cut too large there is nothing but making up another piece that will do. The joints of such a top must always be tight so as to make it as effective as possible.

COAL PRICES INCREASED

Coal prices in the Somerset field of Pennsylvania were increased recently by the fuel administration, a price of $2.60 being fixed for all grades. The old prices were $1.75 for slack or screenings, $2 for run of mine, and $2.25 for prepared sizes. Operators who have complied with the Washington wage agreement may add forty-five cents a ton to the Government price.

The Somerset field produces industrial fuel chiefly, and it is the announced policy of the fuel administration to stimulate the output of fuel needed in the industrial war programme. Coal mining operations on the Baltimore and Ohio Railroad from the Somerset County line to and including Indian Creek and the Indian Creek Valley branch of the same road were added to the field by to-day's order.

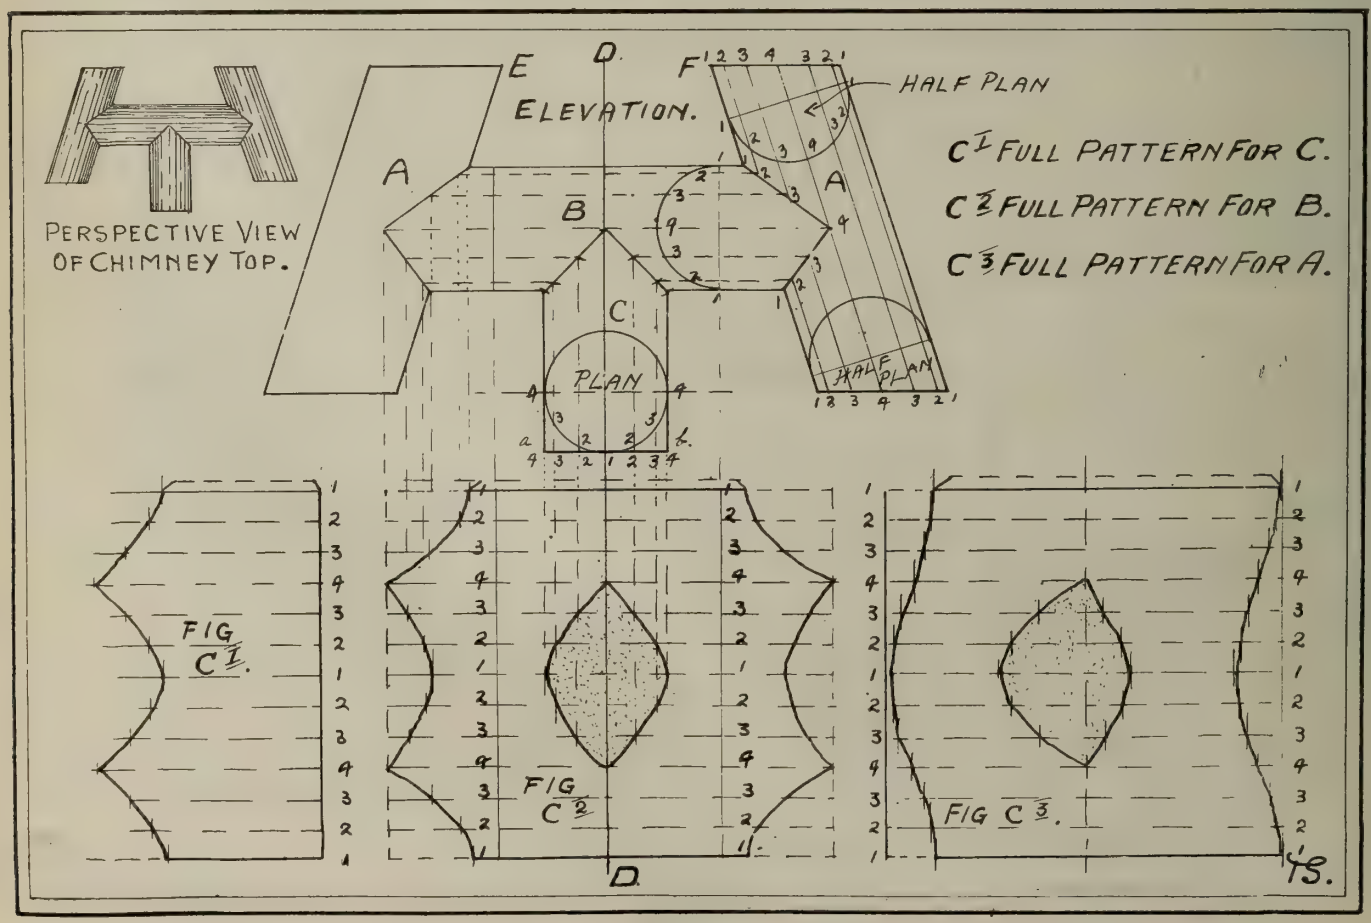

Fig. 2.

Salesmanship a Matter of Knowledge

George Taylor Hardware Company Takes Pains to See That Their Clerks Are Thoroughly Acquainted With Selling Points of New Commodities—All Salesmen Are Equally Familiar With Goods Carried in Store

THE George Taylor Hardware Company of Cochrane, Cobalt and New Liskeard make it a point to see that their salesmen are well-versed in the selling points of any new commodity which they may add to their stock. This concern goes on the principle that when the essential points are known to all the salesmen they are equally competent to make a sale. If one salesman happens to be away from his particular section the nearest clerk or salesman can sell the goods equally well to the customer. "We always make it a point to see that our salesmen are thoroughly acquainted with the article which they are selling," stated J. Perrault of the New Liskeard branch of the George Taylor Hardware Company. "We accomplish this in various ways. If it is at all possible to have the representative of the manufacturer introduce it to our sales staff we always endeavor to have this done. We realize that he is more intimately acquainted with the selling points than perhaps anyone else. If they are able to get his viewpoint they will make better salesmen in placing the article before the consumer.

"Sometimes it happens that it is not possible to have this representative of the manufacturer explain the selling points of the article. Perhaps it has only been possible for the sales manager or buyer to become acquainted with the various points. When that is the case we make it a point to get the salesmen together and have a good-and-welfare meeting—a dissecting time, when the article is thoroughly canvassed and the points set out that differentiate it from other articles of the same class.

"Very often we get the men to come back on an evening that is agreeable all round and the article is then placed on the boards and a minute examination made of all its points. Take for instance the sale of rifles. Some little time ago we had occasion to purchase quite a number of rifles from the City of Toronto. These rifles were secured at a good price and we were able to make a good price in turn to our customers. These rifles were sold largely through our windows, some forty rifles in all. But in order that our salesmen should become thoroughly familiar with the rifle we had a number of conferences over the points of the rifle. Its shooting power was explained as compared with other rifles. When the salesmen are able to tell the exact hitting power of any particular model of rifle, it leaves nothing to guesswork on the part of the purchaser.

"In selling rifles it is very essential that the customer be acquainted with the range, the hitting power and the kind of work that the rifle should be expected to do. Salesmanship that does not know what a rifle will do—or at least what the manufacturers claim it will do—will not get the salesman very far. Men who purchase rifles are, as a general rule, acquainted with various makes of rifles from actual experience, They want to be assured to a certain extent that the rifle they are getting has some distinctive merits.

"When we were going over the merits of the particular rifle in question we had some evening sessions at which we could go into the matter thoroughly without being disturbed by customers. When we were through with that particular article any one of our salesmen knew all the saleable points as well as the manager. This was a big factor in helping us dispose of the number we did. It will not do simply to place an exhibit in the window and then hand out the goods, particularly if the line is one like rifles. The expenditure made on a rifle is considerable and the man is going to size up the various kinds before he finally decides on one. The salesman who is able to come to his assistance in giving all the facts that he wants to know is the one who stands the greatest chance of making the sale. It will not do to have a hazy sort of idea about the subject of rifles in general, and with no specific knowledge about any particular one. Rifles have a mechanism and points that differentiate them. The salesman who is able to enlighten his prospective customer on these points is the one who will get his confidence and accordingly make the sale."

Principles of Salesmanship the Same.

"The principle as applied to the sale of rifles is the same as that which should be applied to every line in a hardware store. Some articles are very easy to understand and there is practically no effort necessary to get the main points about their selling qualities. With a complicated article such as a rifle there is more to learn and the art of salesmanship becomes more complicated. But the method of acquiring the facts about the article is the same. It is not sufficient that an article should be handed to the customer and then leave him to form his own opinion about it. In nine times out of ten he could hardly be expected to catch the salient points about it from merely looking it over. Invariably it is necessary to have these things pointed out. In order to be able to point them out the salesman must know his own goods.

Well-Rounded Knowledge Necessary

The hardwareman, therefore, who would be a good salesman must make a study of the goods he carries. The same things that constitute good advertising points in newspapers are the basic rudiments of good salesmanship. There is a difference, however, as will be noted. When the man is a good salesman on the floor of the store it does not always follow that he is going to write good advertisements for his concern. Very often he can sell the goods over the counter and give all the facts about the article that the customer wishes. But when he comes to placing these ideas on paper he very often fails to keep his eye on them.

It will therefore be seen that the idea of salesmanship is not simply one of handing out the goods. One of the prime essentials is to convince the prospective customer of the best points about the article. When this is done the article is a long way toward being sold. If he has put his case right it is simply a matter of taking in the money. From this it is evident that it is quite desirable that a salesman should have a wide survey of those commodities coming within his scope in a hardware store. He can make it a life-long study and still leave much to be known. If the salesman would take his work seriously—as he should—he would become a much better rounded out man. A study of the conditions and prime points of divergence between various articles is a liberal education in itself.

Sporting Goods Should Sell Now

The Call of the Out-of-Doors—Every Man, Woman and Child a Prospect—Work Hard and Play Hard—A Big Field, and Profitable—Children an Advertising Force—The Question of Health—Get the Edge by an Early Start

GETTING the goods over the counter of the sporting goods department is not such a difficult piece of salesmanship as one might imagine at this time of the year. The period between winter and spring, when weather conditions are bad, makes suggestions for the out-of-doors from the sporting goods department welcome.

The small boy is anxiously awaiting the time when he can don a baseball mitt, the tennis enthusiast is already planning on a better racquet for the coming season, the follower of golf does not always wait for the snow to entirely disappear before he starts getting into his swing. The call of the out-of-doors is strong, practically everyone is just waiting to break the shackles of winter which have restricted their freedom to a great extent for many months.

Every Man, Woman and Child a Prospect

There are so many lines to be featured now that practically every man, woman and child is a prospect for sporting goods of some description. The success of the Canadians in Flanders has been due in a great measure to the dash developed on the football field, by the keen eye necessary to pick out the good ones at a ball game, by the steady nerve required on the green in a close game of golf. These are points that should be borne in mind by every salesman of sporting goods. Every encouragement should be given to the younger element to develop the resourcefulness necessary in so many games and the older ones to maintain efficiency and health to carry on the business at home successfully.

Work Hard and Play Hard

Greater demands are being made on the individual during the progress of the war, and it is essential that every effort be made to keep fit for whatever may be ahead. Hard work is surely being indulged in and to play hard should be equally important.

The Appeal is Universal

To start then with those upon whom the greater responsibility lies. There is golf, there is tennis, there is boating, there is lawn bowling. Some of these suggest greater activity than others, but in each the merchant has an opportunity to develop sales which should not be overlooked. Golf and lawn bowling have in the past been considered the older man's games, but the younger men will be found great exponents of these, and that they are worthy their efforts is becoming more evident each day.

Boating suggests more than just exercise. It may also mean fishing and the development of the fisherman with his tale of the big ones that got away should not be overlooked. Swimming is also indulged in and that means the sale of bathing suits, caps, etc.

Tennis is by no means a lone pastime for the ladies. There are few sports which will bring out the best in the individual man or woman as well as tennis. It is a decidedly strenuous game and may easily offer great opportunities for sales which no merchant should overlook. Racquets, balls, shoes are all good sporting goods lines and move freely from now until fall comes.

Considering the Sales

How, then, can the merchant best develop the sporting goods field—how are sales to be maintained at a high average in these days when so many have answered the call of King and country—how best to impress on the people generally the importance of maintaining sports even though war with its dark cloud hangs over us? These are points which some merchants are considering, but in most cases the shortage of salesmen who are capable of getting the goods over the counter is paramount. Many merchants have left the sale of sporting goods to the younger salesmen in the store and with so many of these away now there has been a temptation to rather let the sporting business slip a little. This is a big mistake. A little careful study of the line only is necessary; getting the goods out on display is the essential point for in nearly every branch of sporting goods the display and individual handling do most towards developing sales.

Be a Promoter—an Enthusiast

One point which the hardwareman should bear in mind, and that is to encourage the promoters of sport, in fact, do a little promoting yourself. It is not an impossible task—as a matter of fact it is often only necessary for the hardwareman to make the suggestion about forming the club. Interest one real enthusiast and the work may be shifted to other shoulders. However, it is well to keep in touch and lend your moral support to all local organizations.

There are so many angles from which the sporting goods business can be approached. It may be that your advice is sought in forming a gun club. There is matter available from manufacturers which gives all details in respect to material needed which will assist materially in determining how best to approach the subject. To develop a steady nerve and a keen eye, what better means exist than that found at the rifle ranges or gun clubs. For young and old alike great enjoyment is possible in the use of the gun or rifle and a sport of more real, practical value at this time would be hard to find.

In taking an interest in the local golf club or assisting in the promotion of a municipal golf links, the merchant attains a measure of prestige which will be reflected in sales of goods required for this form of sport. The fascination of golf is really only known to those who indulge in the game and the most rabid critics become its greatest exponents once they have indulged in an endeavor to get "distance" in their driving or accuracy in their "putting."

A Big Field—and Profitable

One might go through the entire list of recreation that will be indulged in, tennis, football, baseball, quoits, cycling, or automobiling and a little study of the situation will reveal the wonderful possibilities to be developed in this field. Selling sporting goods of all kinds usually results in a profitable transaction, and a balance on the right side of the ledger. The same volume of business in nails would more than likely result in loss. From the standpoint of profits, which every merchant must consider, the sale of sporting goods must present possibilities which should not be overlooked.

To See is to Buy

Conditions to-day are such that the wide-awake merchant is developing sales of those lines which must show a profit. That point must not be lost sight of for one instant. In no other line is it

more noticeable that the purchaser wants to see and examine the goods and the man on the job can eliminate or reduce to a mighty small percentage outside competition as developed by mail-order houses in many standard lines.

Importance of Displays

The methods to be employed in selling are largely those which would govern in any other field of action but particular stress must be placed on display. Let the people know that you have the goods—get them into your windows, utilize display cards and counters; if the goods themselves are not carried at the front of the store, at least have a small display where every one can see it on entering, with a card directing possible buyers to the sporting goods department.

Take any individual line or combination of lines and the window-trimmer has a sufficient range for his best efforts in arranging a display. And an attractive display of baseball, football, tennis or golf supplies or combination of all will secure attention from the man, woman or child on the street as no other goods will.

The Children An Advertising Force

It might be mentioned how great the interest of the small boy or small girl is in baseball or tennis. By securing the attention of the little folk, the news is carried to the home, and the big brother or big sister, the father or the mother will start planning on how the younger ones can be supplied with a baseball mitt or tennis racquet. They naturally take great interest in the development of children and by catering to the youth the merchant has in his possession the greatest advertising medium for his store that can be secured. It has often been said and it can safely be repeated that the youth of to-day are the buyers of to-morrow, and the merchant who realizes this will see that the little folk are made welcome at his store.

The Question of Health

The question of health should be one which the merchant should not overlook in his selling campaign. Too often it is the case in the smaller centres that the young men on leaving school to start work leave off their sporting clothes altogether. Then again the older men do not take sufficient exercise. You may feel in conjunction with other merchants that you work hard and are too tired at the end of the day to indulge in any form of exercise, but it is only the exception to the rule who wouldn't benefit from a half hour's workout in the gymnasium or a couple of hours bowling or golf. You would find that you were better fitted for your work, your clerks would maintain a higher standard of efficiency and that tired feeling from a day at the office would not be present every evening. Apart from that the good-fellowship created in mingling with your fellow men, away from the worries of the office, can be played up as a feature well worth noting.

There are many points to be considered in the sale of sporting goods. Volumes might be written on the advantages to be gained by active indulgence in one or more forms of recreation for everyone, and this angle should be studied carefully. However, the hardware merchant is concerned in getting his goods over the counter and one really important point is display. The windows should be used often, the goods in the sporting goods department should be out in plain sight and newspaper space can also be used to advantage.

What delights can equal those of boating and shooting? The call of the wild is always stirring within as soon as the ice clears the rivers and lakes.

Get the Edge by an Early Start

The out-of-doors is calling and calling strongly and developing this feeling which is felt by everyone after the long, hard winter should result in sales for the aggressive hardware merchant. It is by no means too early to start now, in another week's time your competitor may have secured the edge on you in this game. Be prepared to get the business and go after it aggressively and you will meet with a ready response. Sell the profitable goods and let your competitor have the business that may bring volume but not the bank balance at the end of the year. Sporting goods are profitable and deserve careful attention and real action.

GREAT SUCCESS IN GARDENING

The city of Fort William has reason to be proud of the success that attended the efforts of the citizens in the work of food production. Mayor Murphy of that city has recently drawn attention to the accomplishments of the Vacant Lot Garden Association. A. D. LeMay, chairman of the association, reporting on the work carried out, said:

"There were 1,180 lots given out by the association last year to individual applicants; in addition to these there were several large blocks of land on North May street, and north of the Neebing River which were allotted in bulk to foreign citizens of the coal dock section, which would make in all over 2,000 lots under the association.

"We have endeavored to obtain reports from all the different gardeners as to the amount of vegetables grown. While we were not able to secure these in all cases we did receive reports from a very large proportion. The committee has gone into these reports very carefully, and, basing their estimate on reports received, have arrived at $42,500 as being a very conservative value to put on the produce raised in the gardens of Fort William for the year 1917. The total expenses of the committee was $233.

"For the ensuing year there are already some 160 applications filed for lots. These were received by the secretary during the fall. The office has been closed during the winter but will open again every Thursday evening March, from seven to nine o'clock in the assessor's office, City Hall."

Wallpapers for Season of 1918

While the High-class Taste Will Have Chintzes, Tapestries and Shadow-cloth Effects, Stripes Will go Strong in Popular Priced Papers—All-over Patterns Not so Strong

WALLPAPERS for 1918 are strong on stripes. In all the more popular showings striped effects are likely to predominate. There are some bold striped effects amongst the 1918 styles, and many lighter stripes. Silvery stripes varied with blue and pink tinted stripes are being used in popular priced wall papers. In association with the stripes there will be found floral motifs, in some cases very tiny. Roses are still, as ever, the most popular decorative flower, and will be found developed in all the usual colors from the natural pinks and reds to the conventional blues, greens, and browns. Sprays of roses with leaves appear between stripes, and in some cases are worked into the broader stripes themselves.

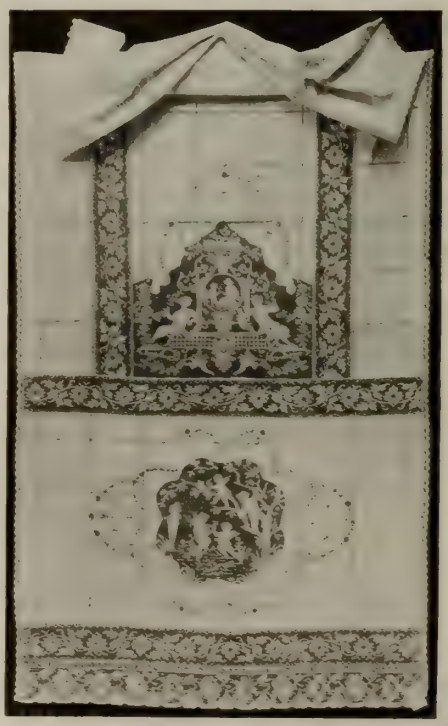
Black Stripes

There are some black stripes on cream or white ground. These are shown in both broad and narrow stripe. It is admitted that no very great demand exists for black and white effects now, but there was for a short period a fashion, or fad, for these and a few will probably be sold here and there throughout Canada still.

In some of the newest floral friezes, however, traces of the black and white stripe idea are found very effective. The stripes come in above the main floral work of the frieze contrasting sharply with the colors of the flowers. The main paper of the room using such friezes would be a simple stripe effect, broad light toned brown bands or stripes varied with equal width white stripes. In the trimmer for this scheme of striped paper and frieze the black stripes will also appear just visibly and no more, at the lower edge below the flowers of the trimmer.

An interesting point about the use of black and white in wall papers is that the taste for the pronounced black and white effects first seen developed from movie picture scenic effects. Because of their photographic qualities probably bold black and white decorations were used in many movie scenes, and the public "took hold."

Florals for Bedrooms



While what are known as "all-over" patterns are not exactly in the lead at present, and are in fact away behind stripes in popularity, there are still some showings of these, and they will be used to a certain extent. Floral designs will be used mostly in bedrooms. Foliage and conventional wall-papers will be found chosen mostly for living rooms, halls, and dining rooms. The exclusive taste in Canada is going in for chintz papers for bedrooms and imported tapestry effects in imitation shadow-cloth style with a white over-print in some cases. For the most exclusive taste very high-priced papers, reproductions of famous tapestries in France, are being shown. Metallic effects, old silver, and blue are found amongst the high-priced papers, but silvery metallic effects and gold effects are being shown also quite considerably in the medium-priced papers.

In some of the handsome tapestry effects heavily massed trees with glimpses of scenery showing shadowy houses, and the suggestion of rivers and mountains may be found. Large ferns in a broad bold all-over pattern appear in other showings, printed on a ground representing woven material, and carried out in dark blue, brown, and metallic relieving touches.

The Enemy Circumvented

Amongst the tapestry effects are the "Soirettes" in soft grays and rose colors shadowed delicately. These were formerly imported from Germany; now they are being made in Canada.

Leaves are having their share of popularity. Some fine designs in conventional leafage are being shown for 1918. One of these representative of the style is in two-tone effect, the leaf—a sort of maple leaf, though conventionalized — being carried in all-over pattern picked out in gold, and shadowed in bold masses which develop to the eye at a distance. The frieze to go with this paper is a larger rendering of the same leaf and done in colors. Good strong browns, blues, reds and greens are used. Or the design may be in lighter toned hues in which case the pinks come into play. Pink in wall-papers invariably makes for popularity.

Hand Embroidered Curtain

A handsome new curtain of jewel cloth with filet lace and motifs of artistic design inset by hand-buttonholing. Hand embroidered garlands in pink, blue and green. Table cover and scarf may be had to match for a boudoir set. From Jennings & Wilson, Toronto.

The Color Situation

It is difficult, since the war began, by the way, to get the best pinks and rose shades in wall-paper. These were obtained in their best purity from the eocene dyes which came from Germany. So far outstanding success in the manufacture of these has not attended the efforts made in the United States to produce them. Pinks, rose tints, and the kindred hues are obtained from Para reds now. They lack something of the qualities of the other kinds, but possess reasonably good qualities as substitutes, and only the expert in colors could detect the difference.

Colors of all kinds, more or less, and the bronzes have advanced considerably since the war as is well known. In the wall-paper manufacturing business the bronzes are fully 350 per cent. more costly now. The colors average about 200 per cent. higher in price. Greens are more, yellows less affected, pinks as stated previously.

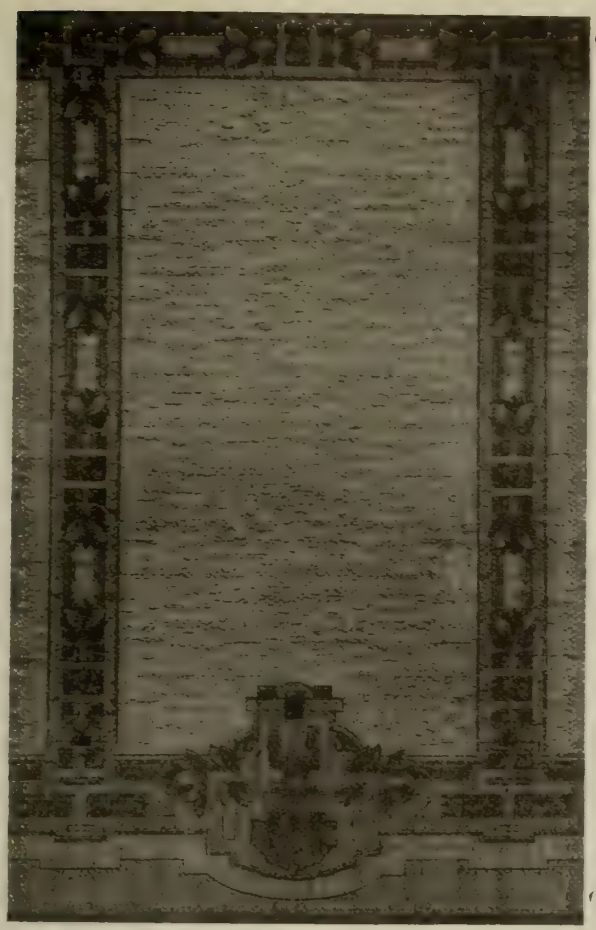
There have been oriental influences at work on the mind of Dame Fashion in wearing apparel, and in wall papers these have found a faint reflection. Some Chinese pattern wall papers, not pronouncedly Chinese, but containing unmistakably the Oriental idea, have been found going fairly well.

Then as a surprise to the manufacturers, an Indian effect, embodying bright vivacious coloring in bold flat geometrically shaped patternings was found to succeed well in point of selling power. This is a novelty in its way, and novelties since the war have been extremely reluctant to appear on the Canadian market for wall papers.

In association with this Eastern influence may be mentioned the favor in fairly exclusive circles which is found for Japanese grass-cloth papers, the imitations or reproductions in paper of the high-priced wall coverings fashionable in America and elsewhere. These, with frieze border and trimmer in plain severe line and mass patterns and carried out in soft browns and yellows, are handsome wall coverings. They possess a curious opening for objection on the part of the user. That is that the joinings of them when the paper is up are

apt to show a little decidedly. Now, although these joinings show infinitely less positively than do the joinings of the actual Japanese grass-cloths costing dollars a yard, yet it is hard to convince ordinary customers who raise this objection and consequently these Japanese grass-cloth imitations are likely to be amongst the exclusive idea papers.

"Life" and a Little Flitter



Canadian customers for wall paper are always apt to demand in the wall papers they fancy, the quality which manufacturers call "life." A touch of good red makes for decision in the buying of wall papers. Flowers must have the right degree of brisk lively realism about them if in natural tints, and must somewhow convey the same impression of life and vigor even if conventional. Brightness and refreshing effect on the eye go towards giving this quality of life which is sought for in wall papers that are to sell. The 1918 showings possess in many cases this quality to a high degree.

There is something known as "a little flitter" which helps a wall paper immensely in effect A bold leaf frieze in handsome ruddy brown hues with the leaves outlined in gold, and "a little flitter"—scintillating frost stuff dusted on where the lights shine up in the design—makes a fine wall paper. The frieze above a plain oatmeal paper with a small leaf trimmer along the base is one of the 1918 showings.

Bathroom papers present the usual refreshing cleanliness of appearance for the incoming season, and sanotiles in various patterns, washable though with matt surface, are shown. A bold design for bathroom paper represents a huge sea-green wave curling over beneath a sky with white clouds. This is a very refreshing effect, and with it goes another with smaller waves and sea-gulls flying airily amongst them. Birds, by the way, have had a certain vogue in the United States in all kinds of wall-papers but are not likely to find any remarkable favor in Canada at present. Marble effects for bathroom papers continue popular, and a tiled effect known as a plain "butcher" paper worked out in simple blue and green for varnishing has been a successful line it is said.

Nursery Papers

Nursery papers are prettier than ever for the 1918 season. They embody the nursery rhyme papers showing the whole story of a nursery rhyme in a frieze, also cat and dog frolics, and the doings of dolls, Dutch and otherwise. A dainty nursery effect is produced in clear cream colored paper with characters from the fairy tales placed as cut-outs upon the surface at regular intervals. The colorings are strong and bright. The result is a fascinating nursery paper.

The Corinthian

A unique rug effect which comes in appropriate colorings, enhanced by a ready-cut border and bands of strapping. From the Staunton line for 1918.

Friezes of all kinds for the 1918 season are cut-out friezes. The picture moulding now goes to the very top of the wall as close to the ceiling as will permit of the use of picture hangers. The lower edge of the frieze cut out at the factory gives a much richer effect than if the frieze were finished by the moulding.

Prices of wall papers are naturally a good deal higher now, but not as much higher as the advance in cost of raw materials would suggest. Paper, for instance, is no less than 130 per cent. higher in price than it was last year. The manufacturers' bill for sizing works out to 200 per cent. more than last year. The increase in bronze and colors have been mentioned. Wrapping papers and cordage are higher; the Kraft papers 300 per cent. up; cordage 75 per cent.

Yet the product—finished wall papers—has advanced only about fifty per cent. The lowest-priced grounded papers, formerly costing 4½ cents a roll of 8 yards to the retailer, are now 7½ cents. Gilt papers, which before the war sold at 6½ cents a roll, are now 9 cents a roll. Other lines are proportionately advanced.

HIGHER COKE PRICES AUTHORIZED

New prices for coke at oven in certain parts of West Virginia, Pennsylvania, and Tennessee have been promulgated by the United States Fuel Administration.

Coke made in Preston County, W. Va., on the Baltimore & Ohio Railroad between Tunnelton and Grafton, and at Meriden, Barbour County, was fixed at $6.75 for blast furnace coke and $7.75 for selected 72-hour foundry coke. The former prices were $6 for the first named class of coke and $7 for the latter.

In the Flat Top or Pocahontas district of West Virginia the maximum was placed at $8. The former prices were $6 for furnace coke and $7 for the foundry grade.

Selected foundry coke manufactured in Indiana County, Pa., from washed coal taken exclusively from the lower bench of coal of the upper Freeport seam is placed at $8 if the ash exceeds 10 per cent. or the sulphur exceeds 9 per cent. and $8.50 if the ash is less than 10 per cent. and the sulphur is less than 9 per cent. The former price was $7.

By-product coke made in by-product ovens at Chattanooga, Tenn., shall be as follows:—For run of oven coke, $8.25; for crushed coke more than 1 inch in size, $8.75; and for selected foundry coke, $9.25. The latter is a new operation and no comparative prices were available.

MANUFACTURE OF PAPER FROM BAMBOO IN TRINIDAD

The publishing house of Thomas Nelson & Sons, of Edinburgh, Scotland, has an important project under way for manufacturing paper from bamboo in Trinidad. About 1,000 acres of land near St. Joseph (seven miles from the capital at Port of Spain) have been planted in bamboo, and a concession has been obtained giving the firm the right to cut bamboo from the Government forests.

It appears that Thomas Nelson & Sons, foreseeing a paper famine throughout the world within the next few years, have been giving very serious consideration to the problem of providing adequate paper reserves for themselves for the future; and although realizing that paper can be manufactured from any vegetable material containing cellulose, nevetheless it seemed to them that bamboo was most suitable for the purpose. They selected Trinidad for their bamboo paper project, as the bamboo grows there very quickly, having sufficient development within three or four years for making paper.

Westman's Hardware, Limited, 121 Dundas Street, London, Ontario, has opened a bicycle department in its establishment.

What Hardwaremen are Doing

Notes of Hardware Advertising Appearing Throughout Canada — Many Hardwaremen Show They Have Some Idea of the Seasonableness of Particular Lines —Getting Accounts in

HAVE ADDED TO ACCESSORY LINES

CROWELL BROS., importers of hardware and ship chandlery, Halifax, N.S., state in reply to a letter from HARDWARE AND METAL that they have added materially to their lines of automobile accessories for this coming season. They have found it a good line as the result of their initial dealings in this line last year. Crowell Bros. state: "We have gone into auto accessories but recently. We started last year with auto tires and a few of the accessories most called for with good results. And we have added materially to our lines for this year."

HARDWARE BUSINESS GROWING

D. K. Clarke, 228 Ottawa Street, Hamilton, Ont., who formerly dealt in hardware, groceries and meats, state they have been compelled to cut out the meat business in order to make room for their growing hardware business. In a letter to HARDWARE AND METAL, Mr. Clarke recently stated: "My progress has been very gratifying and judicious advertising has been largely responsible for it. We have taken over The Bulletin entirely for our business now, and our hardware department has grown till we have been obliged to cut out our meat business to make room for the growing hardware."

The Bulletin referred to above is a six-page folder which this concern issues each month, and which was recently described in HARDWARE AND METAL. The March number contains some historical news facts in connection with the great war, together with a narrative of an officer of the Third Tunneling Company. About one-quarter of the space on each page is given up to an advertisement for the store. The front page contains a picture of the store, together with the announcement that 100 copies of The Bulletin are distributed with the name spelled "Buletin." Those lucky enough to hold these copies will receive 50c cash for each of these Buletins when a purchase of $3 or over is made. The last page of The Bulletin is devoted to advertising hardware lines.

MAKING A DRIVE TO GET IN ACCOUNTS

J. B. Skelton, hardware merchant, Palmerston, Ont., has been making a drive to get in outstanding accounts and has met with considerable success. He made an appeal through advertisement in the local paper and also enclosed a slip when mailing the account. The slip enclosed with the account read as follows:

"Dear Sir: We are enclosing your account for . . . . We are desirous of having all outstanding accounts paid by the . . . . . Kindly let us have settlement by then as we are in urgent need of the money. Thanking you for your past patronage, I remain, yours respectfully, J. B. Skelton."

In telling how this method of collecting accounts worked out, Mr. Skelton stated: "Enclosed you will find copy of a notice I published in my space in our local paper. I would appreciate your opinion with respect to this method of collecting accounts. We also enclosed a small slip of paper with each account, telling of the necessity for settling the account. Up to date the small accounts are coming in very satisfactorily, but large accounts are not so good."

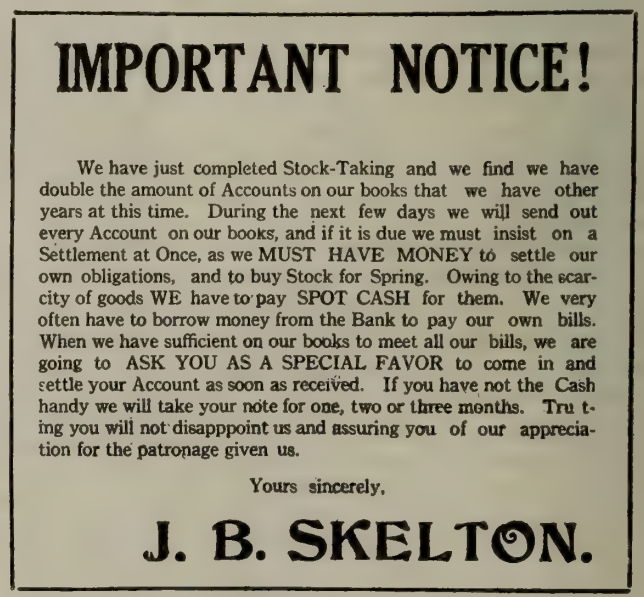
The measure of a new idea is to be had in the results it attains. In the instance above Mr. Skelton asserts the small accounts have been coming in quite freely. The frank appeal which is made is justified. The method brought results and undoubtedly shows that it was a good one.

FIRELESS COOKERS TIMELY

The Bond Hardware Company, Limited, Guelph, Ont., are advertising fireless cookers as fuel savers and time savers. "Fireless Cooker cooks the entire meal, bakes and roasts brown. Outer case made of steel, and reinforced inside so it cannot buckle. Made of pure aluminum, separate covers for each compartment. Cooking vessels all made of pure aluminum. No. 30 Cooker Equipment, one 10 quart, two 4 quart, aluminum vessels; three roasting disks, $26.00. No. 50 Cooker Equipment, one 8 quart, three sectional vessels, three roasting disks. Price, $26.00. No. 55 Cooker Equipment, one 12 quart, one 4 quart and two 2 quart, aluminum vessels, three roasting disks. Price $30.00. These are fuel savers and time savers. Call and see them."

HORSE-CLIPPING SEASON

J. C. Wanless, hardwareman, Chatham, Ont., through his advertisement reminds his prospective customers that the present is a suitable time to groom up one's horse. "This is the time to show your appreciation of that good old slave—your horse—by helping to get rid of his old coat. Use one of our clippers and see how much better he will feel. Either hand or power, and all kinds of repairs for them, too. Hand clippers $2 to $4. Power clippers up to $11.50."



MAKING A BID FOR FENCE SALES

W. A. May of Creemore, Ont., is making a drive on wire fence, telling his customers that special prices are good up to April 1. "Nine strand fence, stays 16 inches apart, all No. 9 wire—the large city stores ask 79c per rod. Our price 75c.

"Eight strand fence, stays 16 inches apart, all No. 9 wire—city stores ask 69c per rod. Our price 65c." For the special benefit of those who patronize the mail order house, W. A. May in the same advertisement states: "Pay the cash and get the goods and see what you get. Not pay the cash and wait for the goods and then be disappointed."

ADVOCATING BROOM SUBSTITUTES

James S. Neill & Sons, Limited, Fredericton, N.B., are advertising substitutes for broom corn. "Have you seen the new substitute for the common corn broom? Owing to the almost prohibitive price of the corn broom we have imported a substitute that will do the work just as well, last three or four times as long and not cost so much. It is light, durable and in every way satisfactory. Call and inspect them."

Reproduction of advertisement used by J. B. Skelton, Palmerston, Ont., in an appeal to his customers to pay up their accounts.

MOVING INTO NEW STORE

John Moxon & Son, Picton, Ont., have been telling the public through their advertisement in the local paper why they were forced to move. They announced that they have purchased a new building. The firm considered that they were being asked an exorbitant rental, and made capital of the fact to give a point of interest to the public. Their advertisement reads:

"We still sell hardware, stoves and ranges. Regardless of all the trouble we have been put to at a time when we could ill afford to move, but did not think we could pay what we considered an exorbitant rental to Mr. C. F. Vandusen of $650 a year, we have purchased the Theatorium Building, and will be located in our new store opposite Royal Hotel on or before May 1st. Bargains on all present stock. Rather than move our present stock we will offer special discounts on all lines up till time of moving. Take advantage of this sale, as we are only offering these low prices rather than move stock. The Overland Car, for which Haight Bros. are agents, will be on exhibition in our new store as soon as we move. Call and see demonstration of same. John Moxon & Son."

EDITORIAL ADVICE

James Duke, Grand Valley, Ont., has been making a strong bid for trade in articles pertaining to the syrup-making season. His advertisement in the local paper reads: "A shortage in sugar production should stimulate every owner of a maple bush to tap every tree possible, and thus make up in part the deficiency. This is advocated by the Food Controller, is good advice, and will be profitable. First, get your pails in order, replace the old ones, put the pans in shape and be ready for the first run. We can help you."

CO-OPERATION IN PICTON

A friendly spirit prevails among hardwaremen in Picton, Ont., as evidenced by the offer of Carter Bros. to place at the disposal of John Moxon & Son any goods they might require as a result of being forced to move through an advance in rents. The following advertisement, which appeared in the local paper, shows the spirit that exists between hardwaremen in that town:

"We did not want to move, as it has been keeping us busy during war times to make ends meet. Mr. Vandusen wanted $650 a year. We offered to pay the same as the Woolworth Co., whose store is the same size, but he refused. The Woolworth Company do not want our store, and our landlord should have received a letter to this effect dated October 29th, 1917, of which they sent us a copy. Friends in need are friends indeed. The following letter was received from our good neighbors, Carter Bros., dated February 22nd:

"Messrs. John Moxon & Son, Picton. Gentlemen:—It is with great regret we learn that you have to vacate the premises you now occupy, owing to your landlord demanding one hundred and fifty dollars per year more rent than he is charging the big Woolworth Corporation for the other half of the building they occupy. Knowing that the work incidental to your moving and arranging the premises bought by you to continue business in will upset you in buying goods, and in other ways, we place as your disposal any goods you may wish to borrow, until such times as you get settled in your new quarters; also consider us at your command in any other way you can use us. In making this offer, we are simply reciprocating the kindness extended by your firm to ours when we were visited by fire in December, 1915.

CONDUCT NEWS SECTION

The George Taylor Hardware, Limited, conduct what is termed "Taylor's News" in their advertising section in the New Liskeard *Speaker*. The idea is to give a similarity to a daily newspaper. Their announcements are, of course, on their various hardware commodities. Their space is three columns wide and one-half column deep. It reads: "Taylor's News. Published by the George Taylor Hardware, Limited. New Liskeard. Cobalt. Cochrane. Thursday, Feb. 7, 1918. Price

Copy of advertisement used by Ingram & Davey, Ltd., St. Thomas, Ont., featuring spring lines. It will be noted that illustrations have been freely used.

—Your attention." Then follows descriptive matter on stable supplies, mill supplies, wrenches, hammers, belting.

CAPITAL FOR BICYCLE TRADE

G. A. Wenige of the Bicycle & Motor Sales Company, London, Ontario, has followed up the unsatisfactory service of the London Street Railway Company with considerable newspaper advertising for the bicycle. He has been using quarter, half and one-page space in the two local newspapers with fine results. In a spectacular page advertisement in the *Free Press* this firm advised the citizens to let the street car company do the worrying about street car fares, because they could be independent with the bicycle. In one paragraph he said:

"At best the street cars can only give you a part service for your money. Fully seventy-five per cent. of the citizens do not live or work on streets with car lines. The result is that you have to walk at both ends, and very often walk all the way. You often hear the announcement, 'Power off.' What does this mean to you? Lost time. Time is money and you cannot afford to lose either in normal times and less so in these abnormal times. If you are patriotic you must conserve. Buy and ride a bicycle.

"Your car fare will pay for a bicycle in one year. Besides you get independent transportation service. Ride from your place of business to your doorstep. No transfers, no waiting, no cold dinner, no lost time, no crowded cars, no one stepping on your feet—besides you inhale fresh, pure air in place of foul, germ-filled air in crowded cars."

GOING AFTER WIRE BUSINESS

Murray's Hardware at Cayuga, Ont., is making an energetic bid for trade in coiled wire and fencing. Under date of Feb. 28 their advertisement in the local newspaper reads: "The wire and steel situation has been affected more on account of the war than any other commodity. We are prepared to offer one carload of coiled wire at $5.50 per hundredweight. Also one carload of fencing as follows: 6 wire, 41 in. high, 9 stay, per rod, 42c; 7 wire, 48 in. high, 9 stay, per rod, 47c; 8 wire, 47 in. high, 9 stay, per rod, 55c; 9 wire, 48 in., even spaced, 9 stay, 60c. Compare these prices with others. We are leaders in our line."

Big Field to Develop Farm Paint Trade

Merchant Has Responsibility to Encourage Sales—Buildings Should Be Preserved—Cheaper to Paint Than to Let Buildings Rot—Implements Should Be Protected by Paint.

By Royal Cluxton.

THE retail merchant fills a very important position in our scheme of national life. This is particularly true of the merchants in towns of under 50,000 population who supply the wants of our thrifty farmers. Not only is the farmer dependent on his favorite merchant for the latest and most improved products that the manufacturer offers, but also for inspiration and education to higher ideals in living. The opportunities that lie at the door of the merchant in this respect are innumerable, and the more initiative is shown by the individual merchant and in his power of persuasion, lie his popularity and success as a merchant. I will illustrate this by referring to our own particular field and mission.

What is more uninviting or dull, in fact I might say unbusinesslike, when travelling through Eastern Canada by train or automobile than the bare, unpainted farm houses and outbuildings? Here lies a great field for education, both for the paint manufacturer and the dealer, but naturally the greater burden lies on the merchant. There can be no excuse against painting from a financial standpoint, because the farmer is obtaining undreamed-of prices for everything he can produce, therefore, he must be appealed to, first from the standpoint of economy. Lumber to-day is costly and it is cheaper to paint than let it rot and decay, also one of the greatest economical crimes committed yearly by every farmer is his habit of leaving expensive machinery standing in fields or barns unprotected from year to year, whereas a quart of implement paint every year would protect several implements from rusting and make his investment last many years longer.

Second is the appeal to the sense of beauty and the greater joy of living as reflected by the many pretty colors offered by high-class paint manufacturers for the protection and beautifying of homes, outbuildings and machinery. In adapting colors in the manufacture of paints, we are merely following and copying nature as reflected in flowers, the trees and grass. An active campaign should be started at once by every merchant to educate our Canadian farmers to a greater sense of responsibility in the preserving of their property by the proper use of paint, and incidentally the seed of higher ideals in beauty and more congenial and attractive surroundings will be planted.

We are far behind the American farmers in this respect. It is estimated that ninety per cent. of American farmers protect their property with paint, and nowhere in the world is there so independent and thrifty a class of people, excepting in Western Canada, where the use of paint for protection and the beautifying of property and machinery is much further advanced than in the East.

Recognizing our own responsibility in this respect, we have established a "Decorative Department," to whom the merchant, the painter or farmer can appeal for special information as to the proper paints or finishes for the different surfaces, but especially in supplying proper color schemes for either exterior or interior decorating; in this respect nature itself is our principal guide, and supplies the correct color contrasts and harmony.

Canadian merchants can greatly increase their business and profits and help materially toward the conservation of farm property and machinery, and to higher and more happy home ideals in our farming life.

INCREASES IN PRICES ON FARM PRODUCTS—EXTRACT FIGURES PUBLISHED BY CANADIAN GOVERNMENT DEPARTMENT OF LABOR

WHOLESALE PRICES ON COMMODITIES, JANUARY, 1918, AS COMPARED WITH JANUARY, 1913

	Number of Commodities	Jan., 1918	Jan., 1913	Per Cent. Increase in Favor of the Farmer
No. 1—Grains and Fodders—				
Grains, Ontario	6	$405.20	$146.20	177.16%
Grains, Western	4	329.70	112.90	192.30%
Fodder	5	208.10	157.10	32.46%
No. 2—Animals and Meats—				
Cattle and beef	6	321.80	177.80	95.36%
Hogs and hog products	6	341.20	172.80	97.45%
Sheep and mutton	3	279.60	123.30	126.76%
Poultry	2	364.80	194.30	87.75%
No. 3—Dairy Products	9	260.10	172.60	50.69%
No. 5—Other Foods—				
Fresh fruits	1	299.80	110.30	171.80%
Fresh vegetables	5	349.80	156.40	123.65%

INCREASE IN COST OF LUMBER AND IMPLEMENTS MAKING NECESSARY THAT THEY BE PROTECTED AND PRESERVED AGAINST DECAY AND RUST WITH USE OF PAINT

	Number of Commodities	Jan., 1918	Jan., 1913	Per Cent. Increase
Lumber	14	$231.90	$ 74.70	210.44%
Implements	33	243.60	117.60	107.14%

Show What the Paint Will Do

An Actual Illustration of Covering Qualities Will Pull Trade—Piling of Paint Cans in a Window is Akin to Making Demonstration of Dry Goods in Original Shipping Boxes

Written for HARDWARE AND METAL by C. J. Morris.

MOST up-to-date hardwaremen have, at some time or other, utilized their store window for a paint display with a view to increasing or creating a demand for their goods. The display in many cases has taken the form of a number of cans of paint arranged in pyramid or other form with perhaps a few display cards urging the public to use paint to renovate the woodwork of their homes or fences.

Displays of this kind are no doubt useful in reminding the inhabitants of a town or district that paint may be purchased from the dealer. But it is questionable whether the same space might not be utilized to better advantage. A display might be made which would do something more than simply act as an indicator as to where the public can buy paint. Something more can be accomplished than impress upon those seeing it the fact that such and such a manufacturer's paints are the best procurable, and that they are all composed of the purest ingredients.

Dry Goods Always Unpacked

Consider for a moment what a similar corresponding display would consist of in a dry goods store! We should have piles of boxes containing straw shapes and feathers for making hats, but the boxes would all be closed. No hats or trimmings would be visible. We should have rolls of dress material neatly tied up in parcels, covered with brown or white paper, with perhaps a sample of the material on the end of each roll to enable it to be distinguished from the others. In the men's wear department we should have similar rolls of cloth, again tied up with nothing more than a sample visible. But would any dry goods or men's wear merchant hope to sell a single hat, dress, or suit of clothes through such a display? He might make certain sales, it is true, but they would not be induced by the exhibition of the materials done up in boxes or parcels. They would be such as he would have made in any case, without any window display. The dry goods merchant realizes this and he therefore not only shows the actual material, but in addition has lifelike figures on which he displays his wares in such a manner as to show exactly what they will look like in the ultimate condition in which they are eventually to be employed. He believes that the selling power of his display is enormously enhanced by an exhibition of what the dress or suit will look like when worn. And is not his belief justified?

Take two tailoring stores, side by side, the one with rolls of the various cloths unrolled to display the pattern and quality and perhaps a figure with a well-tailored, neatly fitting suit of clothes; the other with the rolls of cloth done up in paper and labelled tweed, serge, woollen, etc., piled one on the other. Which store would the average man be likely to patronize if he were in want of a suit of clothes? The question has only to be asked and it is self-answered. So it is with the paint display. An exhibit of paint in tins will undoubtedly remind the passer-by of his need for paint, but the chances of a sale are ten times greater when the prospective purchaser can see, from an actual display of the paint itself, what his fence, house-front or interior will look like after his money has been spent on it.

SOME OF THE CARDINAL POINTS OF THIS ARTICLE

1. An appeal to the eye is stronger than an appeal to the imagination.

2. A portion of unpainted fence placed by side of painted section is concrete proof.

3. An unpainted doll's house in contrast with a painted one shows the advantage of an exterior coat.

4. It is practicable to make this appeal through the eye in window displays.

Displays Should Be Timely.

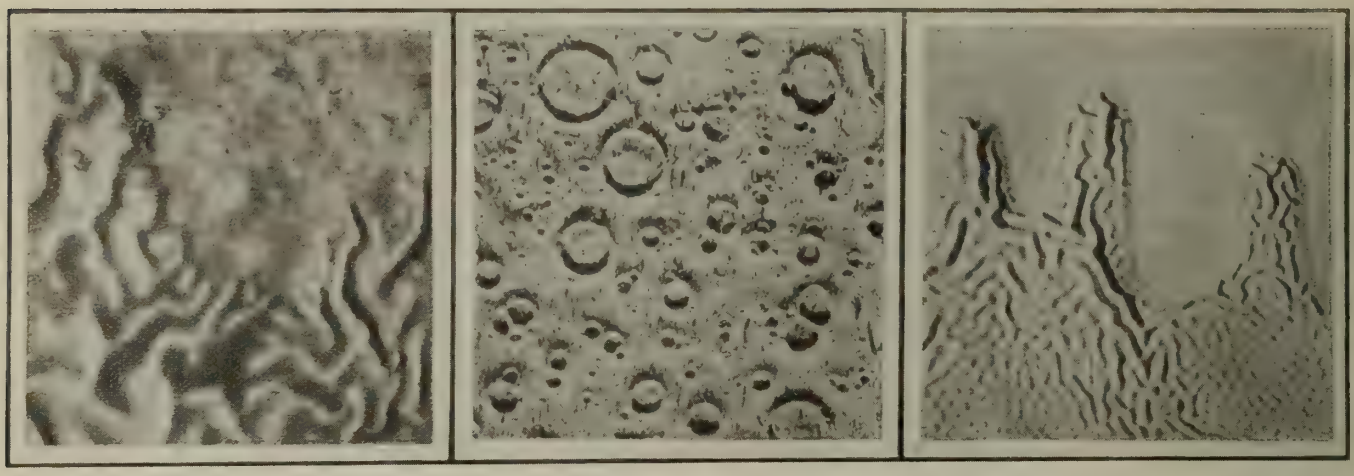
In the consideration of how to make a demonstration display of paint, regard must be had to the season of the year and its suitability or adaptability to the redecoration of the items forming the subject of the display. For instance, it would be of little use at the beginning of December featuring fence or any outside painting. But advice in April or May as to the desirability of painting stovepipes would be opportune. On the other hand the up-to-date hardwareman will not be tied down to the idea that the spring is the only time for outside painting. He will strive to make a market for his paint wares in the fall as well, for the advantages of rejuvenation of garden fences and house exteriors in the fall are even greater than those of springtime.

Spring, however, is with us and it is therefore to the paint man's interest to boost spring as the time for outside decoration. Let us see, then, what he can do on the lines mentioned above by way of a window demonstration.

Most of us have seen at some time or other in the picture dealers' windows one of those portrait oil paintings of a bygone age sharply divided down the middle, one side looking as if it had just received a liberal application of soap and water and the other with the outline of the figure scarcely discernible owing to the dust and dirt accumulated thereon. The idea, of course, was to demonstrate the effect of some cleansing or dirt removing process. An exhibition along the same lines might be arranged to demonstrate the rejuvenating and life-giving properties of paint.

Let the demonstrator procure about half-a-dozen boards from an old fence, sawing off about a foot and a half from the top of each. Fix them together by nailing a strip of wood across the back. Paint three of the boards with a bright-colored paint, say green, or any other color he may prefer, giving two or three coats, and leave the other three boards unpainted. Then place this portion of fence, which will occupy about four feet by one and a half feet, in a prominent position in the window. Above it place a show card on which is inscribed the question, "What will your place look like this summer? Like this or like this?" indicating the painted and unpainted portions of the fencing in turn.

A somewhat similar demonstration might be made to emphasize the preservative properties of paint by making up two similar portions of fencing, one with old and dilapidated boards unpainted and the other with boards in good condition and painted with two or three coats of paint. Then, on a show card between the two—"See how your fence will look in a few years' time if you paint it regularly, and how it will look if you do not!"



A similar display might be made with two doll's houses—the one neglected and dirty, the other bright with a fresh coat of paint—to mark the contrast between the painted and the unpainted house-front. Many ideas of this nature will occur to the inventive mind of the live paint man. Let these ideas be money-makers by turning them to account as paint sales producers.

How Many Coats of Paint?

The question often arises as to how many coats of paint are necessary for a certain piece of work. Here again ocular demonstration is far better than theory. To demonstrate the results produced by one, two or three coats three boards should be procured—one painted with one coat only, the second with two coats and the third with three coats, and labelled accordingly. A glance at these boards will answer any question on this head far more effectively than half-an-hour's theorizing.

Many Causes for Paint Complaints

Blistering, Cracking, Blooming, Poor Lumber, Brush Marks, Discoloration of White Lead, Old Painted Surfaces Are Some of Common Causes—Care of Brush and Proper Mixing Are Essential

HARDWAREMEN have often run counter to customers who complained that the paint did not do the work as it should. In very many instances these complaints were made necessary because the person who applied the paint did not understand the proper method of application. Hardware merchants will further their interests in developing trade if they anticipate some of the common causes of complaints before they happen.

The Care of the Brush.

No matter how good the paint may be its good qualities may be marred by a brush that is not properly treated. Brushes intended for the application of paint, enamel or varnish should be made ready for use the first time by soaking in linseed oil. A distemper brush on the other hand should be brought into use by soaking in water. The soaking in oil or water is intended to swell the binding and so prevent the bristles from coming out under the drag put upon them when in use. Any care and attention given to the brush is well repaid. For any important work a well-broken and reliable brush should always be used. Brushes which are in use should never be allowed to rest on the tips of the bristles but should be suspended in a tin of oil or varnish as the case may be.

The brush should always be cleaned out immediately after use. If this is not done paint or varnish will accumulate at the end of the bristles near the stock and will leak out when the brush is again used. If this paint or varnish is allowed to become hard, small particles will be brought down into the working part of the brush and thence on to the work, which causes a rough unsightly appearance. This defect is frequently assigned to the paint or varnish itself.

Causes of Blistering.

One of the commonest complaints about paint is that it often blisters. Invariably this is due to lack of adhesion between one or more of the paint films and the paint beneath. It often takes place also between one or more of the paint films and the original surface. If the blistering is caused by the undercoats being too hard it is apparent that no key or binder is provided for the paint above. It may also be caused through the surface containing a trace of moisture. The real explanation of the blisters lies in the fact that they are due to the generation of some gas, usually water vapor, but sometimes carbonic acid gas. Carbonic acid gas is caused by the action of some acid material either in or beneath the paint on the carbonate of lead, which is present in white lead paints. An example of this action is to be seen in the way a resinous exudation from wood may set up the chemical action in the pigment. Blistering is more pronounced if the paint is applied too thickly or is too oily in composition.

REMEDY: A thorough brushing out and working up from a comparatively flat coat through successive coats to a more elastic coat as a finish.

Cracking Has Numerous Causes.

Cracking of paint is a most annoying defect. Paint, varnish or enamel films exhibiting cracks have evidently lacked tensile strength. Unless the surface pull or tension is equal at all points in all directions the film will separate either at one point or at a series of adjoining points. If the series of points form roughly a straight line, then fissuring is the result. If only at one point pin-holing is the result. Cracking of paint is often caused by the final coat being less elastic than the undercoat. Exposure to changes of temperature during drying period will also cause cracking, which is often accompanied by wrinkling.

Blooming of Varnish Due to Moisture.

It sometimes happens that varnish undergoes what is known as "blooming." Clouding and fogging of varnish is akin to blooming and are very often the first stages of the defect. Blooming is almost universally caused by absorption of moisture by the surface. The presence of this moisture produces the optical effect in the varnish which is at once unsightly and erratic in its appearance. Conditions of temperature and humidity have a material bearing on this tendency. The best way to insure against the defect is to see that varnishing is carried out under proper conditions of weather and temperature. Uniform temperature and good ventilation are essential during the drying period. Fumes from gas stoves and bad or stagnant air are frequent causes of blooming.

If the case is not a bad one polishing the surface with a thoroughly dry chamois leather will sometimes effect a cure. Another means of removing it is to rub the surface with a strong acetic acid, afterwards polishing with a clean leather. Sometimes, however, when the bloom is temporarily removed it comes back again.

Crocodiling of Paint.

When the surface of paint assumes a rough, uneven appearance by the formation of ridges on the surface it is said to "crocodile" or "craze." Cracking or fissuring is not implied but may follow later. The defect is caused by the paint drying on the surface, which then contracts. Drying out of lumber

after having been painted would cause such a defect.

Flaking of Paint.

The cause for the flaking or scaling of paint from the surface is due to the destruction of the binding material. This will be hastened if the surface below is not suitable to receive the paint. A surface that is too hard or glossy does not make a receptive one for paint. Paint that flakes is naturally very brittle, and is often preceded by checking or cracking. It is, of course, a sign that repainting is necessary. In general it is stated by an authority on the subject that an oily paint will flake more readily than a flat one.

Paint will often peel from galvanized iron not because the life of the paint has gone but because it has not been able to secure a proper foothold. One of the usual expedients to overcome this is to delay painting of galvanized iron till about six months after exposure. But this method is held to be objectionable in that corrosion may already start. The difficulty has been largely overcome by the manufacture of paints containing a certain amount of tooth.

On account of the high price of good lumber suitable for proper painting many varieties of woods are used which make it difficult for the paint to do its best work. Some of the woods now used are yellow and other hard pines, spruce, cypress, cedar, basswood, gum, which are often full of rosin or pitch or are very soft and spongy by nature. Any wood that is so full of sap or moisture is bound to make the paint peel as soon as the moisture is acted upon by the sun. Woods that contain rosin or pitch will exude those substances after a coat of paint has been applied and the action of the sun on the outside of the paint film draws the pitch out of the lumber. The paint then loses its adhesiveness and peels off. This defect could possibly have been avoided by the intelligent use of pure spirits of turpentine in conjunction with pure raw linseed oil for thinning the first and second coats.

Cause of Brush Marks.

There are three main causes why the marks of a brush show on completion of painted work, namely, an improperly prepared surface which remains absorbent, incompetency in applying the paint or that the paint is too thick for the job. Ordinary paint, distemper and enamels flow out after they are applied and the brush marks disappear. A wide expanse of wall sometimes makes it difficult to eliminate brush marks entirely.

Special treatment with a particular kind of brush is found effective in some cases.

White Substance on Brick Walls.

It often happens that a white incrustation, or efflorescence, as it is called, appears on the surface of brick and stone walls soon after they are completed. It may also appear on old buildings, particularly after a very heavy rain of long duration. This efflorescence is in the shape of a light powdery crystalline substance. The cause of this phenomenon is the presence of certain soluble salts contained in the clay from which the bricks are made, in the stone or in the lime from which the mortar is made. This white powdery substance in many cases is a form of sulphite of magnesia or impure Epsom salts.

Remedy: The surface over which the substance is spread should be well brushed down. The wall should then be washed with a solution of soapy water, made by dissolving two pounds of soap to a gallon of water. When the wall is dry it should then be followed by a coat of alum in solution, in the proportion of one pound of alum to a gallon of water.

Discoloration of White Lead.

One of the properties of white lead is that it darkens when exposed to sulphur fumes. Sulphur is contained to a small extent in the air of all large towns in which soft coal is burned. Where anthracite coal is used there is little or no sulphur given off. The discoloration is caused by action of the sulphur on the lead, thereby forming a sulphide of lead.

Remedy: In towns or cities where soft coal is burned a preventive measure may be taken by using a pigment such as zinc oxide, which will not be affected in the same way.

Precautions in Exterior Painting.

New or very old or spongy surfaces require that sufficient pure raw linseed oil should be in the first and second coats to properly fill the wood and stop the absorption of the oil and binder from the paint film. There should at the same time be enough oil to bind the pigment. Where new surfaces are hard and resinous a liberal percentage of pure spirits of turpentine in first and second coats will insure penetration.

Treatment of Old Work.

Where a surface has been painted previously and presents a hard surface, equal parts of pure spirits of turpentine and pure raw linseed oil should be used in reducing the first coat to a thin consistency in order to secure proper penetration and even drying of the new coat of paint.

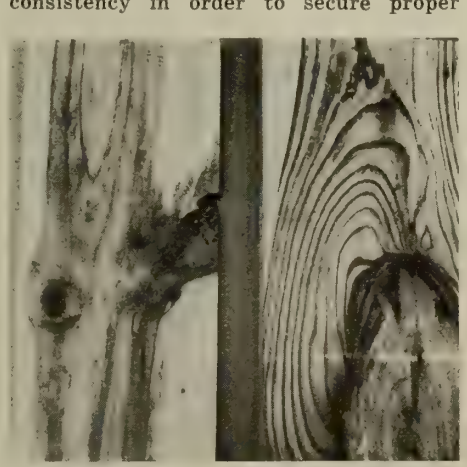


Illustration shows a knotty surface in lumber which requires special treatment.

Avoid Painting Near Mortar Beds.

It is always advisable not to do any painting near fresh mortar beds, as the oil in the paint has a tendency to absorb the moisture and fumes from the lime. This will destroy the life of the oil and will cause the paint to flat out and perish. It should be remembered that leaky roofs and gutters or broken-down spouts are responsible for many cases of blistering or peeling.

Mixing Paint.

Manufacturers lay great stress on the proper mixing of prepared paints. To mix paint well some very essential points should be observed.

1. The can should be shaken well before opening.

2. After the top has been cut out, at least two-thirds of the vehicle that may have raised above the pigment should be poured off.

3. Stir the pigment and remaining portion of the oil with a smooth, strong paddle that will permit getting around the edges and thus bring up all the pigment.

4. When the mass is smooth and entirely uniform throughout, the remaining oil should be returned little by little until all the oil has been put back.

5. Pouring from one can or one pail to another about six times will complete the stirring and mixing process. Each time the paint is poured about one-quarter of the paint should be left in the pail that is being emptied.

IRON ORE PRODUCERS ASK HIGHER PRICES

Iron ore producers in the Lake Superior district are awaiting announcement of the price to be fixed for ore for the 1918 season. When the prices of steel and iron were fixed by the United States Government in September the prevailing iron ore price was not reduced, the Government schedule accepting the market quotation of the day as a fair price.

Figures were presented at Washington to show that underground operators work on a close margin of profit, and, on the basis of present costs, mining next year would be conducted at a loss. Members of the Lake Superior Iron Ore Association stated at a recent conference that the underground mines, constituting 46 per cent. of the shipments from the Lake Superior district, must be operated at full capacity to produce the country's ore requirements for 1918, and that ore prices must be high enough to give operators a fair profit.

Costs of producing ore in October and November last year and the profit or loss submitted the Government by experts show that on the Mesaba range underground mines the cost of ore laid down at Lake Erie ports was $4.763 per ton last year, while the average price received was $4.933, leaving a margin of profit of 17 cents. The net estimated profit in 1918, based on 1917 ore-prices, is placed at 11 cents.

Future of Linseed Oil One of Uncertainty

Influences at Work — Elements Combined to Boost Prices — Widest Range in History—The Past Year's Activities— Solution in Transportation, So Future Unknown

TWO-DOLLAR linseed oil, which was reached last week, has created a slight feeling of unrest among the trade, and some idea as to what the future will bring forth would be indeed welcome. However, dealers are not doing much prophesying these days, and from the rapidity with which this commodity climbs or declines, it would appear there were very few lines which would be as hard to gauge.

Since the outbreak of hostilities, August 1, 1914, when linseed oil was quoted at 69 cents per gallon, prices advanced to what were considered abnormal figures and later declined to about the same figures again. One year after war was declared linseed oil was selling at 67 cents, two cents lower than the figures then prevailing. Another year and prices were around 85 cents. About another year went by and prices were up to $1.42 and six months later they have climbed to the figure mentioned in the opening sentence, namely $2.00.

Influences at Work

There are a great many elements which enter into the price of linseed oil. The price of flax is, of course, the governing factor and rumors of a short crop, of a damaged crop, of excessive export shipments with little moving to the crushers, are some of the elements which enhance values. Further, optimistic reports from the United States as to an exportable surplus of the same from the Argentine, with suitable transportation facilities available, tend to influence prices downward.

Elements Combined to Boost Prices

This year all the elements seem to have combined to shove prices to unheard-of levels. Big shipments of flax from Canada's western fields are going to the United States, where the supply of seed is limited.

The exportable surplus from the Argentine is considerably less than usual and whereas movement of this crop usually begins in February, there is no advice that same is moving as yet. All flax from this source will have to come by sailing vessels, according to a recent order put into effect, and whether the export of flax will be considered of sufficient importance, in view of the food shortage, is considered doubtful.

Predictions Not Being Made

Dealers are united in expressing the view that the position of linseed oil is most uncertain. They state that predictions are more than likely to fall flat and not a great deal of hope is held out that any big decline in oil is likely to be registered for some time to come. The movement of flax from the West has been very unsatisfactory, in fact it has been disappointing. The railways have had extreme difficulty in maintaining anything approaching a regular service and consequently goods which have been moving have been for the Government—wheat and materials of war. Whereas this does not assist crushers and dealers, they can only smile and blame it all on the war or conditions which brought the war about.

Looking to the opening of navigation as affording some relief, it is possible that this may help, but again the railways enter into the situation and conditions which may prevail at terminal points are not easy to determine.

A Weakening Influence

One factor which would be more than likely to exert a weakening influence on the market would be advice that shipments of seed from the Argentine were on the way. But it must be remembered that only sailing vessels will be used and that means at least four months for shipments to reach their destination after they have started.

Not Much Hope from Additional Tonnage

When it was stated that Great Britain and the United States were to take over 1,000,000 tons of Dutch shipping, it was at first thought that this might exert an influence for good and declines on the Winnipeg Exchange for flax were registered. However, advices given out by these Governments indicate that these ships taken over will be used to transport food first and war material next to Great Britain and her allies. This may relieve some vessels now in this service, but with the United States now actively in the war, far greater tonnage is required to transport her soldiers and the supplies necessary for their maintenance, so the traffic will largely be overseas.

Prices Show Widest Range in History

Prices during the past few weeks show the widest range ever recorded in a similar period and are practically three times what they were on August 1, 1914, prices then being around 69 cents to 70 cents per gallon.

How the Prices Climbed

On January 5 of the present year, prices on linseed oil were as low as $1.41; on February 2, $1.50; on March 16 they had climbed to $2.00 per gallon, following advances of 23 cents and 5 cents in two succeeding weeks. The advance since the first of the year has been 59 cents or an amount almost equal to the total price three and one-half years ago.

A little look into the past of linseed oil shows some interesting figures. Beginning with August 1, 1914, as mentioned before, the price was 69 cents per gallon. July 31, 1915, prices were two cents per gallon less, or 67 cents. On November 15, 1915, prices had commenced to soar somewhat and 79 cents was the price. On January 15, 1916, a price of $1.09 was reached. From then until June of that year there was a steady working towards lower levels, when the price declined to 77 cents per gallon. However, by the middle of September it had worked up to 85 cents and from then until March 24 last year a steady movement towards higher levels was maintained and a price of $1.40 was reached.

The Past Year's Activities

From March 24 until the end of the past year there was not a great deal of action. Declines were registered and on June 2 oil was quoted at $1.32 per gallon. By October 13 it had come back to $1.42 and with little variation this price was maintained until the first of this year. Since then the meteoric rise is well known to all followers of linseed oil and it is thought that the peak has just about been reached. However, that point is one that's uncertain for $2.00 linseed oil was undreamed of in 1914 and that price of 69 cents per gallon on August 1 looks awfully small just now. See what the table below reveals in the matter of prices.

August 1, 1914	$0.69
July 31, 1915	0.67
November 15, 1915	0.79
January 15, 1916	1.09
March 15, 1916	0.97
June 15, 1916	0.77
September 15, 1916	0.85
November 10, 1916	1.10
March 24, 1917	1.40
June 2, 1917	1.32
October 13, 1917	1.42
November 10, 1917	1.32
December 1, 1917	1.39
January 5, 1918	1.41
February 2, 1918	1.50
March 2, 1918	1.72
March 9, 1918	1.95
March 16, 1918	2.00

Solution in Transportation, So Future Unknown

The situation being faced to-day by crushers and paint manufacturers is more one of securing supplies rather than price. The transportation question is overshadowing all others and although hopes are expressed that improvement will speedily develop, the present outlook is really serious. The seed is not moving and this means crushers cannot supply the paint manufacturers. Fortunately spring paint orders are pretty well completed and a brief respite may follow which will enable conditions to right themselves. However, it is more than likely several weeks must elapse before a really easier tone is evident and though manufacturers may have to draw on reserve stocks as never before, they expect to be able to fill all orders which come to hand.

Property Has Advanced—Sell Paint to Preserve It

Retailers should not let the question of high price influence them to take paint and oil from their sales program. If paint and oil are high, no less so have property values climbed and the value of paint from the standpoint of conservation is too great to be overlooked. Sell paint and more of it should be the tenor of the retailers' campaign this year.

Do Not Scare Paint Sales Away

Hardwareman Talked High Prices to a Prospective Customer and Thereby Lost a Sale —Arguments of Paint Salesman Brought the Customer Back and Induced Him to Buy—Cheap Paint Idea Can be Combated

"HOW is the price of paint today?" asked a well-to-do farmer of a Minnesota hardwareman when he entered his store. "Paint is as high as hell!" returned the hardwareman. And with that the prospective customer turned on his heel and made tracks for the door as fast as he could go. The above story was told recently to a representative of HARDWARE AND METAL by the president of one of the large paint concerns with branches in Canada and the United States.

But the story did not end there. For a representative of the paint concern, whose president told the story, happened to be in the store at the time the farmer came in. Action came so quick when the farmer asked and received such an answer that the salesman could hardly collect himself to remonstrate or help the hardwareman put up an argument. Such tactics on the part of the hardwareman were new to him. If the salesman had had an opoprtunity to remonstrate with the farmer he would have, in all probability put the situation in a different light. However, he took pains to enquire of the merchant who the man was. On being informed that he was a well-to-do farmer and that he could well afford to spend some money on paint, even though prices were higher than in normal times, he took the trouble to saunter down the main thoroughfare of the town in an endeavor to find the farmer.

He found him presently placing some groceries in his wagon preparatory to leaving for home. He engaged him in conversation and here is where some fine tactics came in that enabled him to turn the attention of the farmer again toward paint. "That was a fine joke the hardware merchant played on you. He is laughing about it still. He thought you would take it in the spirit in which he intended it. He knows that paint at present prices is a good investment and that you will be back to buy from him sooner or later. He is not worrying because he knows he will get a higher price from you when you do come. That was a big joke. He was still laughing about it when I left the store."

By such a line of talk he induced the farmer to look at it in a different light, with the result that he piloted him back to the hardware merchant's store and there made a sale of paint which the merchant had seriously and without intent forestalled for a time. The hardwareman declared that it was a mighty fine object lesson for him and that he would never again shout about high prices in such a way as to frighten customers from the store. He went to school to the paint salesman and was taught thereby to be a better salesman.

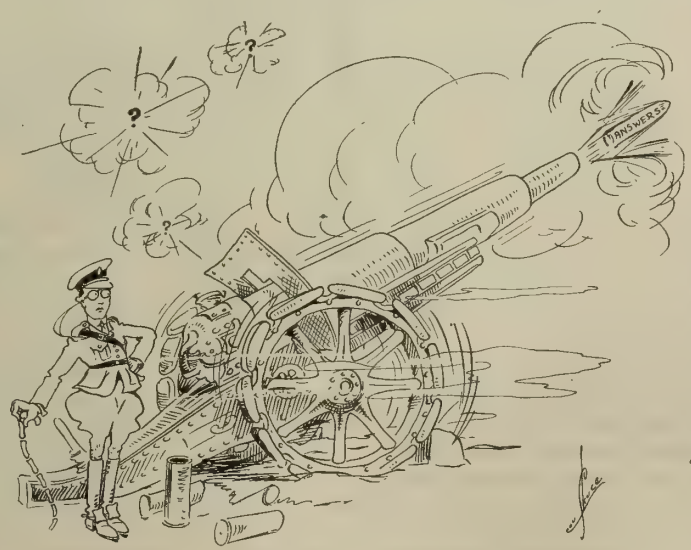
Have Recourse to Cheap Paint

The president of the company who related the above incident furthermore asserted that many paint companies have endeavored to meet the problem of rising costs in paint manufacture by marketing a lower grade of paint at prices ranging from 50c to $1.10 below the level of their first quality brands. By so doing, he pointed out, they were following the lines of least resistance and were thereby showing a weakness in the conduct of their business.

"The most valuable asset that any business firm has, whether manufacturer, jobber or dealer is its reputation for handling quality products and fair dealing. And nothing is harder to re-establish than a reputation once lost.

"Many people are influenced by price rather than by value in buying, but no matter what they pay they expect satisfaction from it. If it does not meet their expectations they blame not only the maker of the article, but the dealer from whom they bought. Once their confidence is lost they will seldom come back to give repeat orders. Quality and satisfaction are the only sound basis on which to build and develop business. A merchant cannot afford to jeopardize his good name by selling cheap paint, even if he did not recommend it."

How Paint Might be Cheapened



The manufacturer in question instanced a case where paint was being sold at $1.50 per gallon, which it was alleged was a guaranteed paint. He took the trouble to show how it would be possible to make a paint to sell at such a price. With pure paint of best quality at say $4 per gallon the manufacturer stated it could be cheapened by the addition of one gallon of naphtha at 25c, one gallon of coal oil, and enough whiting to body up the paint at a cost of 25c. This would bring the total cost of the three gallons of paint to $4.50, or $1.50 per gallon, and there would in all probability be a better grade of paint than the one originally sold at $1.50. This mixture could be cheapened even still further by the addition of water instead of the other liquids.

Appealed to Reason

The above facts were placed before a dealer by a manufacturer's representative to show how it is possible to make a paint that will sell at almost any price. But it is always well to drive home the fact that the best quality paints have a superior hiding power, uniformity of covering, spreading capacity and serviceability. When a dealer holds fast to the principle of quality and talks quality he may lose some sales occasionally but the business thus lost is not a matter to worry about. Eventually the purchaser will come to find out that it did not pay to buy cheap paint. It should be remembered by every paint salesman that the quality will be remembered long after the price is forgotten.

Necessity for Higher Prices

As outlined in an article elsewhere in this issue there is a reason for the present cost of paint. That reason is the greatly enhanced value of all raw materials. But compared with the cost of other commodities paint is still a good buy as will be noted by reference to the increased cost of almost every commodity that enters into the manufacture of paint. People come gradually to look with less fearsomeness on high prices after they have been accustomed to them for a time. It is the newness, the novelty, that very often keeps them from buying. When a customer is shown that high prices are justified and that it is impossible to get the best grade article without paying an increased price he is usually content to pay the price for the best article.

Why Paint is High in Price

The following should be the selling price of a white paint composed of 60% of lead and 40% of zinc, allowing 5% profit to the manufacturer:

Market Price of Lead	*Market Price of Oil*	*Selling Price*
$14.00	$1.40	$4.32
13.00	1.40	4.21
12.00	1.40	4.10
10.00	1.40	3.90
14.00	1.30	4.23
14.00	1.20	4.13
14.00	1.00	3.90
14.00	0.80	3.63

Need for Faith in Fairness of Paint Prices

F. J. Penberthy Asserts the Dealer Should be Well Grounded in the Reason for the Present Cost of Paint—Faith is Essential to Assist Him in Making Desired Sales

AT the recent convention of the Ontario Retail Hardware and Stove Dealers' Association at Hamilton one of the interesting papers read was that of F. J. Penberthy, manager of Lowe Brothers, Limited, Toronto. A lot of interest was taken in this address. Of particular interest were the charts which Mr. Penberthy used to show the increases which have been made in the price of raw materials during the period from January 1, 1915, to October, 1917. HARDWARE AND METAL has been able to reproduce these charts through the courtesy of Mr. Penberthy. They will be found on the opposite page. In explaining these charts later to a representative of HARDWARE AND METAL, Mr. Penberthy said:

"These charts represent but a few of the many articles used in the manufacture of paints and varnishes, and the percentages of advance are based upon the price of these materials January 1, 1915, and October, 1917. They are not based on market prices but are actual purchases, and the percentages would naturally vary with each manufacturer. Illustrating this by one item—shellac for instance. A manufacturer, jobber, or retail merchant may have had in stock on January 1, 1915, a quantity of orange shellac at a very low price, say 16c per lb. If the same manufacturer, jobber or merchant wanted to buy a quantity of orange shellac to-day it would probably cost about 72c laid down, which would be an advance of 350 per cent., while the chart shows an advance of only 250 per cent. On the other hand, a jobber may have bought shellac about January 1, 1915, at 20c, and in the fall of 1917 he may have purchased at 62c, and this percentage of advance would be only about 200 per cent. If a comparison was made of the actual market price of the material mentioned on the charts on January 1, 1915, and January 1, 1918, a far greater percentage of advance would be shown, and practically all of the items mentioned have increased from 10 to 25 per cent. since January 1, 1918."

Faith in Manufacturer Necessary

In the interview with Mr. Penberthy regarding the chart showing the various selling prices by the manufacturers of a paint composed of 60 per cent. white lead and 40 per cent. zinc, together with linseed oil and turpentine, it was his idea, he stated, in presenting this chart to show the hardware merchant that he must not be influenced by small fluctuations in the open market price of any one of the items mentioned. That is a small decline in the price of linseed oil or a small decline in the price of lead would not make any material difference in the price of finished paint. He stated further that it was his idea to impress upon the hardware merchant the fact that in order to make his paint business a success during this year he must have absolute faith in the fairness of the paint manufacturer and a feeling that the present level of prices was not unjust, and also the fact that it was not one or two things that influenced the advance or the decline of mixed paint, but it was everything entering into the manufacture of the product."

Sales of Paint Depends on Attitude

Mr. Penberthy is a firm believer that the sales of paint made this coming spring and summer and fall will be governed entirely by the attitude of mind of the paint dealer. If he is convinced the present prices are justified by the facts then he will adopt a courageous attitude toward his business getting and will let his customers know "the faith that is in him." The courageous attitude will be contagious, and the customer will in turn take a firmer stand in the matter of buying. With the necessity for painting clearly outlined to the customer and the knowledge on the part of the dealer that present prices are justified there should be an excellent sale of paint during the coming season. Especially should there be a good trade with the farming community, as they have the money to spend in view of the high prices paid for food products which they have to sell. It was pointed out that the price of paint has not increased in the same proportion as the price of wheat.

How Large are Glass Stocks?

In an Interview With W. R. Hobbs, Manager of Montreal Office of the Consolidated Plate Glass Company, "Hardware and Metal" Learns Some Interesting News

IN view of the recent curtailment decided upon in the United States regarding glass manufacture and to which reference was made in March 9 issue of HARDWARE AND METAL, the following article based on an interview with W. R. Hobbs, manager of the Consolidated Plate Glass Co., Ltd., Montreal, will be of added interest:

"For some time past we have been anticipating our wants and have placed orders for our needs during the coming season," said Mr. Hobbs. "In view of the situation which has developed, and considering the fact that a great many jobbers have been depending to a great extent on the glass importing companies for their needs, it would appear that a great deal of glass will be wanted through these important sources."

Mr. Hobbs stated that there were great quantities used in replacing the destroyed glass at Halifax. But, notwithstanding the fact that many carloads had been sent forward there, these had been absorbed for immediate and actual needs.

Now it is generally known that much property was destroyed there, and that a great deal, if not all, of this will have to be rebuilt. It will require glass. This will have to be supplied through the regular channels to a great extent, for, with the United States situation curtailed as it is, there will be little likelihood of supplies coming forward outside of the regular Canadian resources.

"If I were in the market for any glass I would buy it to-day," said Mr. Hobbs. "There is little likelihood, I think, of glass being again advanced, and I cannot see a single item to point to a revision downward for the immediate present. But in view of all circumstances there is likely to be a real shortage later, and those who place their orders now will be more likely to get what they require for the coming season."

Mr. Hobbs was asked concerning the United States situation. "Prices there will probably advance," said Mr. Hobbs. "This may be necessary owing to the fact that certain costs, including wages, have not entered into the consideration of the manufacturers, and as this is an item that will call for a larger outlay, an advance will perhaps be made. It is probable that there might be a revision upward here later in the spring."

Augmenting his remarks on the available supply of glass, Mr. Hobbs stated that there was already a shortage of certain sizes, and that this would be a condition which the dealer would have to face. If the sizes wanted are not procurable it will be necessary to take the next larger size, and if it runs into a new "break" the price applying therefor will have to be paid.

COMPETITION HAS PERSONAL ELEMENT

Competition is not so much a matter of warfare between your house and another as a trial of skill between yourself and the representatives of rival lines. In other words, the personal, rather than the commercial, element predominates in it. If you are to win against competitors, you must study the game untiringly, accept hard knocks with cheerfulness, and learn from hardship how to strengthen your selling method. In other words, you must never lose control of your temper nor mastery of your judgments.—"American Artisan."

EDITORIAL COMMENT

EDITORIAL BRIEFS

PRESS reports from Ottawa state that the new Parliament was opened with a minimum of ceremonial, fuss and feathers. This is as it should be. Canadians are tired of fuss and feathers. They have been fed up on it for many years.

* * *

THE retail merchant, when preparing plans, should always take the weather into consideration. The habits, sports and requirements of the public change with the weather. Window and indoor displays and newspaper ads should be prepared accordingly.

* * *

REPORTS from the United States indicate that the steel situation is clearing and from now on there will be a gradual improvement. It will be possible to tell with some definiteness what actual prospects are for future supplies.

* * *

LADIES' purses for the Senators is the latest from Ottawa. More than a thousand dollars' worth have been supplied as stationery supplies for the Senate. These supplies included 100 ladies' bags at $8 each, and 40 ladies' purses at $5.50 each. The Senate indignantly refuses, it is said, to disclose why these were purchased. The war-time taxpayers are supposed to guess for themselves.

* * *

IF Sir George E. Foster's "Daylight Saving Bill" passes and becomes effective, he will at last have accomplished something worth while in his capacity of Minister of Trade and Commerce. With an extra hour of daylight each day and with the prodding which the department is now receiving from various quarters, it may not be too much to hope that the Department of Trade and Commerce will yet awaken to its opportunities.

* * *

LET us all hope and urge that the action of the paint manufacturers in eliminating unnecessary colors, thus preventing waste and duplication of stock, will be followed by manufacturers in other lines, and particularly in hardware and allied lines, where there is at present a useless duplication of styles, sizes, designs, etc. The elimination of waste is one of the big problems which Canadian manufacturers, wholesalers and retailers have to face to-day, and the sooner duplication and waste can be eliminated the better for all concerned.

PRODUCTION SHOULD BE ENCOURAGED

GRAIN production in Canada this year promises to equal, if not surpass, anything in the history of our country. Favorable reports are being received from all parts of Canada. The retail hardware merchants of Canada can do a great deal towards encouraging the great production movement and in this connection not only perform a patriotic duty, but incidentally assist in developing their own business. The retail hardware merchants of Canada come in closer touch with the farmers than any other class of merchants. Retail hardware merchants also come in touch with the city and town dwellers, who should be encouraged to make use of waste ground. Hardware merchants last year through their efforts were the means of inducing thousands of citizens to prepare gardens. Vacant lot cultivation was carried on in a big way, and can be greatly enlarged during the Spring of 1918.

In the development of Canada's latent productive capacity, which creates new credit resources, lies one of the strongest sinews of war. The part business can play in the winning of the war is incalculable. Hardwaremen are doing a large share, but there is room for even greater efforts.

WHITE LEAD IN OIL ADVANCES

LARGELY due to the spectacular rise in the price of linseed oil there has been an increase of 50c per hundred pounds in the price of white lead in oil. Linseed oil is scarce owing to the difficulty experienced by crushers in getting flaxseed shipped from the Canadian West.

Cash flaxseed in Winnipeg on Wednesday of this week sold at $3.96 per bushel as compared with $3.45 per bushel a month ago, or on February 21. There has been a big demand for Canadian flaxseed from crushers in the United States. While transportation problems on Canadian lines have prevented movements of seed to Eastern Canada in anything like the quantities required it has been moving south into the United States.

The price of pig lead in the primary market is down slightly and the market is quiet. It would seem therefore that the increase in white lead in oil has been due largely to the situation in linseed oil.

There are indications, however, that linseed oil may be easier to obtain when transportation on the

lakes opens, thereby permitting shipment of seed over that route. One of the large dealers in linseed oil was quoting oil for future delivery at 3c per gallon lower than last week.

Putty has also advanced 25c per hundred pounds on standard grade, due largely to same causes affecting price of white lead in oil. There is, in addition, a scarcity of whiting reported.

COURAGE IS NEEDED

IN THE face of the high price of so many commodities many merchants have hesitated to ask what was really their due. They were afraid lest they should drive the trade away from their store. With rising costs in every department they have been content to take smaller margins in many instances because they have not had the courage necessary to get a fair margin.

This is a point on which every retailer should take himself seriously to task. If he is not getting the margin of profit that he did in pre-war days, how can he hope to weather the time of keen competition that will undoubtedly come after the war is over?

During the year 1917, it was pointed out by an expert trade commissioner, that of the 250,000 corporations in the United States 100,000 declared no dividends. Ninety thousand only declared a profit of $5,000 and less, while only 60,000 showed a profit on their investment of $5,000 and over.

The reason for this condition of affairs is asserted by experts to be a lack of courage and efficiency to procure a fair profit on their investment. Each retailer should endeavor to see that he is not numbered in this class.

ASSAULTING A COMPETITOR

THERE are numerous ways of assaulting a competitor. One of the most common is to attack his integrity or his honesty. Some merchants are of the opinion that they are furthering their own trade when they are running down the other man's goods. If a competitor is not honest, sells inferior goods, gives short measure or is guilty of dishonorable acts of any nature it is always well to let the public or the law pass judgment upon him.

This criticism of one's competitors is a boomerang which in the majority of instances recoils on the head of the thrower. For the most part, people are from Missouri in this respect. They require to be shown that another merchant is all wrong before they will accept it as a truth. They will, in fact, demand proof. Invariably they will come to the defence of the one thus attacked without chance of defending himself. Inwardly they give him the benefit of the doubt.

It is always an indication of small business methods to run down one's competitor. It will get the merchant a very short distance along the road of winning trade.

WHERE INEFFICIENCY COMES HIGH

EFFICIENCY of employees was one of the subjects which the National Retail Hardware Association of the United States discussed at their recent convention in Boston. This organization embraces some twenty-one different states. Reports from some 1,795 retail hardware dealers who assembled there indicated that the average cost of doing business was 17.242 per cent. of the capital invested.

Of the number of stores reporting, 891 kept their costs below the average, 126 doing their business at a cost of less than 10 per cent of the capital stock. A score of concerns ran their costs up to 30 and 40 per cent., which brought the average cost of doing business to a high level.

A report of the convention stated that it was a fair assumption that cannot be tested by material in hand that the high cost comes within the group of stores who reported that they had no special training for their employees and that there was lack of efficiency among their employees.

It would be a good plan if retail dealers in this country would size up their own cost of doing business. If it is too high it would be well to inquire whether some of the increased cost is not due to the fact that pains are not taken to see that employees are trained along the lines of efficiency.

DAYLIGHT SAVING NEEDED

Daylight saving is absolutely necessary this year in order that production may be facilitated. With an extra hour of daylight there will be more incentive for people to take up with gardening. The additional food that will be raised if this measure is passed will undoubtedly be considerable.

Hardwaremen are interested in the project from a two-fold point of view. First of all they are patriotic enough to desire greater production of foodstuffs in the interest of the Allied cause. Secondly, it will be of interest because of the chance for increased trade in garden tools. There will also be a big saving in fuel in amount used for lighting during the extra hour.

HONESTY PAYS

Business reputation is built by years of patient endeavor. The corner-stone of all enduring business is honesty. It matters not whether the principle is applied to the sale of a five-cent article or to a million-dollar article. If the customer feels that he has obtained value for his money and has not been duped he will come back again. Retention of old customers and addition of new ones is the law of business growth.

The Bicycle Has Become a Necessity

Ever-Broadening Field For Its Use—Big Sale Anticipated During the Coming Spring—Hardwaremen Can Capture Much of This Trade if They Are Looking For It

WHOLESALE dealers are looking forward to a bigger bicycle trade this spring and summer than they have ever had. They base their belief on the initial orders that have already been placed by many retail dealers. As soon as the roads dry up sufficiently to make their use possible there will undoubtedly be much interest in this article as a means of transportation. There is an ever-broadening field for the bicycle. One reason for the great increase in the demand for the bicycle during the past two or three years is the interest which mechanics and skilled workmen have taken in it as a means of getting them to and from their work. They have not hesitated to make an investment in a bicycle because they have had the money with which to do it. Mechanics who are night workers in munition plants and other industrial works have found it very essential in getting to and from work, especially where there has been no street car service. With its use day men can go home for a hot lunch at noon. The saving of car fare has been a big consideration toward inducing them to make an investment. The saving of time is another big consideration. Where it would ordinarily take half an hour on the street car the trip on a bicycle can be made in fifteen or twenty minutes. Besides there is no crowding on street cars to contend with.

Clerical Workers Should Ride

Those engaged in clerical work indoors in many instances have come to the conclusion that it would be beneficial from a health standpoint to spend their going and coming time on the seat of a bicycle rather than in a crowded street car where they secure no exercise whatever. The sale of bicycles can be pressed with advantage for the use of boys and girls going to and from school or on errands. There is an ever-increasing field for the sale of bicycles among messenger boys or firms who desire their messenger boys to have them. Numerous small stores have reduced their delivery systems to a boy on a bicycle. This has been done with advantage to both the storekeeper and to the bicycle dealer. To the storekeeper it means a greatly reduced cost of doing business and to the hardwareman it means a larger number of sales. The grocer butcher, druggist, florist, stationer, musical store, dressmaker, milliner, even a hardwareman himself can use this kind of delivery system to good advantage for very many commodities.

Selling Points of a Bicycle

Dealers in bicycles could perhaps increase their sales by dwelling more on the advantages of the bicycle. First of all it is a big convenience. It is always ready, and the amount of repairs and attention necessary are very small.

2. It is a money saver. Fares spent on street cars and in lunches eaten downtown would go a long way toward paying for the bicycle even in one year.

3. It is twice as easy as walking. The same effort expended in walking a mile will carry the individual two miles if put into propelling a bicycle.

4. It is a time saver. It will get one to his destination three times as fast as one's legs will carry him. It is even swifter than the street car when the delays of transferring and waiting for cars are considered.

5. It is a necessity because of its utility. It helps in short hauls. Transportation difficulties to-day are mostly short hauls. That is where the bicycle scores. It passes the acid test of utility.

6. The public is kindly disposed toward the bicycle at the present time. The pendulum has swung it back into popularity after a period of comparative inactivity following the first burst of enthusiasm.

Make a Good Display

A display of bicycles in any hardware store always lends to the attractiveness of the store, especially if those bicycles are the new models which are being displayed. Some dealers have even been known to place their display of bicycles somewhere in the rear of their store in an inaccessible place. In consequence they did not have a display that caught the eye of the customers in the store. A bicycle window will greatly assist in arousing enthusiasm to the point where a sale can be made. Everything points to an excellent trade in bicycles and bicycle accessories during the coming spring and summer if the dealer does his fair part in placing the many advantages of the bicycle before his customers.

RECORD SALE OF ELECTRIC WASHING MACHINES

A good record in the sale of electric washing machines has been established by Donald Sinclair, hardware merchant of Paris, Ont. Mr. Sinclair has sold forty-eight electric machines and was publicly honored with the novel reputation while attending the recent convention of the Ontario Retail Hardware and Stove Dealers' Association in Hamilton. On this occasion the manufacturer made the statement that Mr. Sinclair has created a record so far as this manufacturing company was concerned in the sale of electric washing machines among the hardware dealers of the province.

"Many dealers do not know how to handle the electric washing machine" says Mr. Sinclair "they are not definite enough in their purpose to place a machine on trial in the homes of prospective purchasers."

The plan followed by Mr. Sinclair is, briefly, as follows: He first makes a list of all acquaintances in the town or vicinity who are included in the catagory of possible purchasers. With the ones who employ a washwoman regularly he uses arguments tending to show that the elimination of the expense of a washwoman will pay the difference in the cost of an electric machine in a short time.

"The housewife has to help the washwoman anyway," says Mr. Sinclair. "She might as well devote the same or less attention to an electric machine and save the cost of the washwoman's salary."

Mr. Sinclair urges all these customers to take a machine and try it. In very few cases where he has succeeded in getting a machine installed in a house is it returned after trial. He has used an electric machine himself for some time and is therefore closely acquainted with the merits of the washer. He finds that the relation of details concerning his own experience in the use of an electric machine is a big help in persuading customers to give the washer a trial.

Electric Equipment a Promising Line

More and More the Trend is Toward Use of Electricity in Stoves and Ranges, Heating Systems, Irons, Sewing Machines —Spring Offers Chance to Push Sales

THE world has had its stone age, its iron age, its coal age. Now we are in the electric age. The trend of development is all toward the use of electricity for all sorts of conceivable purposes where heat or power or light are needed. During the past winter there has been given an impetus to the use of electricity that will not soon be forgotten. With the shortage of coal people have cast longing thoughts to the time when they would be able to heat their homes by electricity. Big strides have already been made along these lines. Within the Hydro belt in Ontario there are hopes that the heating of homes may be an accomplished fact within the near future. Inventors are working feverishly to the end that they may be able to perfect their heating systems by the time there is sufficient power available for this purpose.

Heaters Already in Secure Place

The experience of many people during the past winter has in all probability made them resolve that they would endeavor to get along with the minimum of coal during the spring months. Coal was high in price for one thing and the severity of the winter necessitated the use of an unusually large quantity. These facts will cause people to let their fires go out at the earliest date possible. There will be chilly evenings, however, when some heat will be required. And here is where the electric heaters should fill the bill. With a small investment they can be had ready to turn on and off at a moment's notice. There will be no lost heat. Every atom of heat that is given off will be utilized and there will be no loss during the middle of the day as there is with a coal fire when it is kept at a low point simply for the sake of keeping it lighted. A prominent display of these electric heaters during the spring months with catchy advertising matter to draw the merits of this line to the attention of prospective customers will result in considerable trade that might otherwise be missed.

Irons for Summer Months

Electric irons are now as much a necessity as electric light. They do away with the necessity of a hot fire to heat the sad irons during the summer months. They are economical because only enough heat is used to do the work. When the iron gets too hot the current can be turned off. It is much handier than the continuous changing of irons from the stove, to say nothing of the uncertain heat which these irons give off. When the heat is turned on it goes immediately to the point of the iron where it is most needed. With the old-fashioned iron heated over a fire or gas the entire shell became hot, but in the electric iron the heat remains in the sole plate where it is needed. This is a line which the hardwareman can well start to push during the early spring months.

Electric Toasters a Summer Line

Another of the lines which is primarily a summer line is the toaster. It should be in demand for the same reason as the electric iron, namely, the absence of heat during the toasting operation, because of the economy and convenience, and also because it can be made to do the work far better than toasting over a gas fire or over a coal fire. Grills and chafing dishes are other important electric lines, the sale of which can be urged to advantage during the spring and summer months. Always the idea of absence of heat, convenience, and saving of fuel and power should be kept uppermost to further the sale of these articles.

Numerous Electric Lines

Besides the lines enumerated above there are numerous others which offer a field for development of trade. There are the automatic electric cook stoves which solve the problem of the fireless cookers. Electric vacuum cleaners are a line which relieves drudgery of cleaning during the summer months. Electric fans have come to be almost an essential in very many homes. Electric washers make the washing day lose much of its terrors for the housewife. These are but some of the lines which the hardwareman can make a drive on during the coming months from a sales standpoint.

Canada Favored in Tinplate Regulations

Full Text of Regulation by United States Shows Dominion on Same Basis as Republic

THE War Trade Board has published new rulings governing the exportation of tin plate and terneplate. Mention of this fact was made two weeks ago in these columns; the full context of the regulations is now available, according to announcement in the Official Bulletin of the United States Government.

Under these new regulations licenses may be granted to manufacturers of tin plate and terneplate or to persons other than a manufacturer, provided the purchase of the plate has been made directly from a manufacturer prior to November 12, 1917, and also provided such purchase has been made to fulfil a contract or firm order from a purchaser abroad placed with a firm in the United States, a copy of which must be annexed to the application. Export licenses for tin plate or terneplate may be granted only for shipment to Canada, South and Central American countries, including Mexico and the West Indies, China and Japan, and only when the plate is to be used either

(1) To manufacture containers for edibles for human consumption by the people of the nations at war with Germany or her allies, or

(2) To manufacture oil cans, provided, that the plate has been ordered from the mill on or before August 27, 1917. In this case there shall be no distinction made between purchases from manufacturers and purchases from others, or

(3) When the plate is to be shipped to any of the above-mentioned countries except Canada, it is to be used for purposes which shall contribute directly to the successful prosecution of the war; or

(4) When the plate is destined for Canada it is to be used for purposes for which tinplate or terneplate is now permitted to be used in the United States.

Affidavit With Application

In all cases the application should be accompanied by an affidavit verifying all the statements in the application. Evidence satisfactory to the War Trade Board to the effect that the tinplate or terneplate to be exported will be used for one or more of the purposes above stated must also be submitted with the application, together with a guaranty executed by the consignee or the actual recipient of the goods at destination, to the effect that the plate will be used only for the purpose set forth in the application. This guaranty may be executed either by a duly authorized representative in this country of the foreign consignee or recipient, or it may be filed by such consignee or recipient with the American consul nearest to the destination.

Export licenses will not be required for filled tin containers, containers lined with tin, or for tin-foil used as a wrapper on or as containers of licensed goods.

Licenses may be granted for the exportation, except to European and African countries, of tin lanterns, tin-lamp founts, tinned rivets, tinned wire, printers' type, tin kitchen utensils, tin tableware (not silver plated), tin sundries, tin toys, and tin specialties, solder and Babbit metal.

Licenses for Other Articles

If satisfactory evidence is presented to the War Trade Board that the goods will be used in such a way as to contribute directly to the successful prosecution of the war licenses may be granted for phosphorized tin, white metal, and other tin alloys, and empty tin containers.

Opportunities for Building Materials

Increased Cost of Lumber and Other Materials Brings Possibilities of Ready Roofing and Wallboard to Fore—Difference in Cost of Latter 25 to 40 Per Cent. Less Than Former

THERE is undoubtedly a need for more building activity at the present time, but operations are at a low ebb due to the high cost of lumber and labor and other materials which enter into the construction of homes. In many cities there is a real need for homes for the working people but there is very little construction being carried on owing to the bugbear of high prices in building materials. Increased cost of building to-day as compared with prewar costs is placed at 40 to 50 per cent higher, owing to the increased cost of raw materials and labor. This seems to be an effectual bar to extensive building operations. Merchants in some towns have felt the need of encouraging building. In the town of Windsor the board of trade has taken up the matter with the result that a publicity campaign committee has been organized with a view to encouraging building operations.

How Building Has Declined

While building operations in Canada have not stopped entirely they were nevertheless at a low ebb during the years 1916 and 1917. In thirty-five of our larger Canadian cities from which reports are received the amount of building during the banner year of 1912 amounted to $185,000,000. For the same cities during the year 1917 the amount of building reached the total of approximately $35,000,000. While there has been a reduction of $150,000,000 in the amount of building compared with the banner year for building in Canada it will be seen that there is still some being carried out. Even without an impetus along the lines of building operations with the regular building materials those interested in the building trades anticipate that the activities for the year 1918 will not be less than those for 1917.

Standardizing Buildings

There is a chance for the reduction of the cost of building, however, through the substitution of other building materials. One of the methods whereby building cost can be reduced lies in the standardization of buildings and the use of materials such as wall board and ready roofing. By the adoption of proper designs much material and labor can be saved and buildings can be erected with the minimum of effort. Manufacturers have an opportunity to help out in this respect by building homes for their employees that will conform to certain well worked out plans. The smaller manufacturers and the farmers could also be relied upon to assist in this movement toward cheaper building.

Farmers Should be Good Purchasers

The farming community should be a fruitful source of trade for ready roofing and wall board. They are prosperous at the present time owing to the high prices which they have been getting for their products. Ready roofing is adapted to their use in that they can lay it themselves. Construction of buildings from wall board and other materials can also be accomplished with a minimum of labor. There is always a certain amount of labor available for this work which might be unsuited for farm work.

Hardwareman Should Advocate

By being an advocate of building with these materials the hardware merchant can thereby turn considerable trade into his own store. The hardware store is naturally the first place of call for those living in the rural communities intending to build. With his knowledge of prices of builders' hardware, cement and similar products inquiry is usually made from him first as to the probable cost of these commodities. If he can give the intending builder any encouragement along the line of comparatively cheap construction he will serve himself a good turn. It would undoubtedly mean more trade for the hardware merchant if he would familiarize himself with these various lines. He could get information from the manufacturers if he is not already conversant with the cost of these materials as compared with the regular building materials.

Saving to be Effected

By the use of these substitutes for building materials one of the manufacturers estimates that a saving of from 25 to 40 per cent. in the cost of building could be effected. This would bring the cost of erection to practically the same figure that prevailed for construction in 1912. This is an item that is well worth placing before prospective build-

ers. From these materials it is possible to erect a warm, durable and artistic building—one that will serve in every way all the requirements of a home. There is also a large saving to be effected in the amount of time and labor required for the construction of the buildings. Homes thus constructed can be considered in every sense modern homes. There will still be the opportunity for the sale of builders' hardware in connection with the construction of this class of building. By pushing the sale of these building commodities the hardwareman will enlarge his trade possibilities.

Housing Problem Important

The housing problem in the immediate future will be an important factor in the industrial development of any community. A hardwareman who can assist in any way by directing the line of development so that building will not seem a prohibitive proposition will be doing a service to his community. By advocating the use of ready roofing and other building materials that can be obtained at a reasonable price he will be doing a good turn not only for himself but will be directing his attention to materials which have perhaps been overlooked to a certain extent. This is a time when all classes of materials which can in any way meet the requirements and at the same time be secured at a lower cost should be requisitioned. The assistance of the manufacturer can be enlisted to good advantage by the hardwareman in getting information that will help him make a more persistent drive in an effort to capture this class of trade.

U.S. Produces One-half World's Aluminum

Production in Canada Amounted to 8,000 Tons — World's Output Estimated Between 135,000 and 150,000 Tons

RECENT action of the President in fixing the price of aluminum calls attention to the rapid growth of this industry in the United States, which has now become the leading world producer of aluminum. A compilation by the National City Bank, of New York, shows that the production of aluminum in the United States has grown from 60,000 pounds in 1890 to 7,000,000 in 1900, 48,000,000 in 1910, 100,000,000 in 1915, 140,000,000 in 1916, and approximately 180,000,000 in 1917, these figures being in very round terms. The value of the product, which amounted to a couple of million dollars in 1900, was $16,000,000 in 1915, and approximately $46,000,000 in 1917. Exports of aluminum from the United States have grown from $1,047,000 in 1914 to $20,300,000 in 1917.

This rapid increase in production in this line places the United States far in the lead among the aluminum producing countries of the world. In fact, about one-half of the world's output of aluminum is now produced in the United States, for while authorities differ somewhat as to the production by certain of the respective countries, they agree that we now produce about one-half of the world's output, which is variously estimated at from 135,000 to 150,000 tons, or slightly more than the world's production of tin, for which aluminum is now becoming a substitute in certain lines.

Substitute for Tin

This fact that aluminum is proving an acceptable substitute for tin in certain industries, and that its cost is now no greater than that of tin, is especially interesting and important to the United States, because of the fact that while this country produces no tin, and sends large sums of money abroad for that article, it is now the world's largest producer of aluminum and able to increase indefinitely its output. Virtually all of the $65,000,000 worth of tin imported into the United States in 1917 came from the Malayan Peninsula, the Dutch East Indies and our South American neighbor—Bolivia, and while most of our aluminum production at present is for use in airplanes, automobiles, helmets and cartridges, the possibility that it may be found an acceptable substitute for tin for certain general industries and thus reduce our dependence upon foreign countries, adds importance to the rapid development of the aluminum industry in the United States. Nearly $500,000,000 has been sent out of the United States in the last dozen years in the purchase of tin, most of it brought from the other side of the globe.

Canada Produces 8,000 Tons

The aluminum production of the world in 1916 is set down at approximately 140,000 tons, of which approximately 62,000 was the product of the United States, 20,000 produced in France, 16,000 in Norway and 8,000 in Canada. Figures differ radically as to Great Britain, ranging from 4,000 to 12,000 tons production. In Switzerland the normal production is about 20,000 tons, but has been materially reduced by inability to obtain bauxite from France.

Bauxite, the mineral from which most of the world's aluminum is produced, is found in many parts of the United States, though the bulk of that now used in the industry is the product of the State of Arkansas and is turned into the finished aluminum at several great establishments in various parts of the country, the most important being at Niagara Falls, water power being deemed an important factor in its successful production. Other works recently established are in the States of New York, Pennsylvania, New Jersey, Maryland, Tennessee and North Carolina.

Results of Increased Production

The prices of aluminum have greatly decreased with the enormous increase in production, falling from $12 per pound in 1870 to $2 in 1899, and ranging thence downward to an average of 33 cents, and then down to about 20 cents in the year preceding the war. With the greatly increased demand and increased cost of production the average price in 1916-17 was about 33 cents per pound; the President's recent order having fixed the price for the period ending June 1, 1918, at 32 cents. No census figures are available as to the amount of capital invested in the aluminum industry in the United States.

World production of aluminum has increased twenty fold since 1900, while that of tin has scarcely doubled meantime. Aluminum production in 1900 was 7,200 tons and in 1916, 135,000; tin production in 1900, 77,200 tons, and in 1916, 117,500. The import price of tin in 1916 averaged about 43 cents per pound.

NOVEL PLAN FOLLOWED IN "DOLLAR DAY"

Some novel features were introduced into the Dollar Day sale recently held by the merchants of Paris, Ont. This town has a record for carrying on this annual sale with utmost success. Some merchants of the town recorded sales of as high as $1,400 in the day. Over 13,000 coupons were turned in at the end of the day, representing about $15,000 worth of business done among the merchants of the town. The chief point emphasized by the merchants is that Dollar Day did not affect business on succeeding days, as is often the case. Though the special sale fell on Friday, this year, the regular business of Saturday was not interfered with.

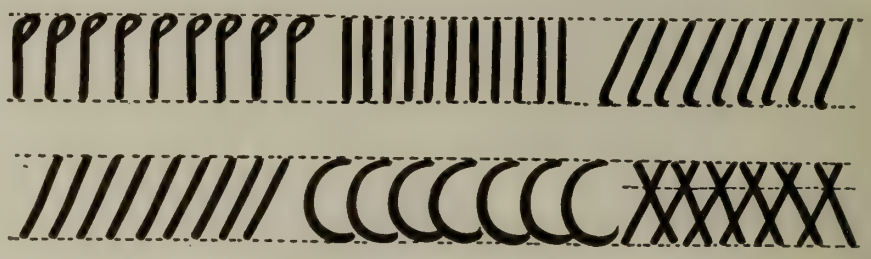
A new feature of Dollar Day in Paris was the decision of merchants to give a coupon for money paid on account, as compared with the previous practice of giving coupons only for cash. The cost of the Dollar Day campaign was distributed among the merchants so that the highest charge to any individual dealer was $8 and the lowest charge was $3.50. This amount was levied on the basis of the extent of business done during the day.

In preparing the way for Dollar Day, merchants of Paris distributed leaflets throughout the town and vicinity. Each rural route was thoroughly "billed" by the dealers themselves. The merchants think that much of the success of Dollar Day in Paris is due to the fact that the dealers themselves endeavor to show that they have a personal interest in the townspeople and inhabitants of the adjacent towns and country places. This is accomplished by the dealers taking a day off and distributing the bills themselves.

The success of Dollar Day in Paris is sufficient testimony to the effectiveness of the methods employed by the town merchants in arousing interest in the special sale.

Something New for the Cardwriter

A Series That Will Give Ideas and Instructions for the Cardwriter Who Has Already Mastered the Rudiments of the Work.



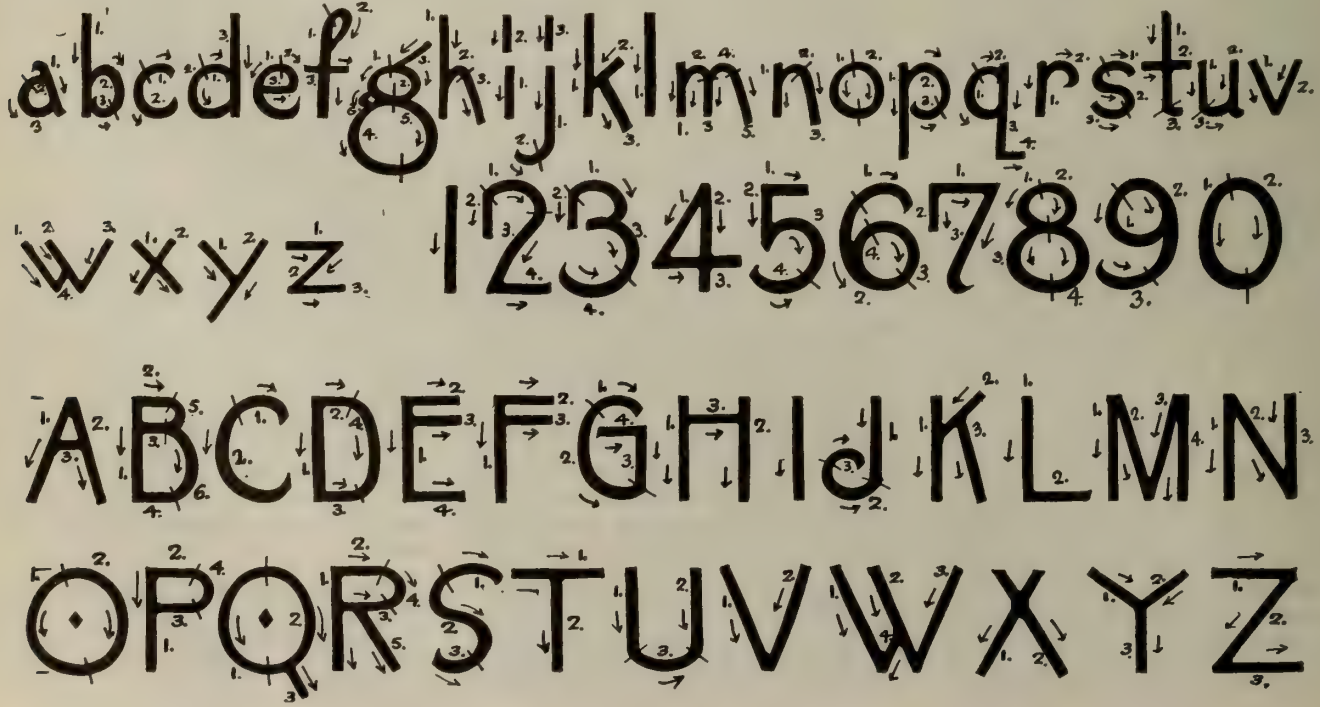
By Robt. T. W. Edwards

OUR last lesson was the first of a series of show card lessons which is being published for the sole purpose of showing our readers just what Toronto cardwriters are doing. As we stated then in the last year the cardwriters of this city have struck a new note in the various designs and styles of letter formation used. The latter is the more noticeable and it is to this branch that we are paying the most attention. It is necessary that cardwriters should change their style of letter formation from time to time in order to prevent their cards from becoming stale. You must abstain from ordinary type formations or your work will be merely commonplace. This, at least, appears to be the idea of the "new blood" cardwriters who have come to Toronto, men whose methods the Toronto merchants have taken to very readily, with the result that their work is seen up and down our main thoroughfares and in the windows of our most up-to-date stores.

There is a large variety of styles both of single stroke and outline letter formation, all of which have that little touch of originality which adds life to the show card.

Last month we illustrated a double stroke or outline letter on which were used various forms of shading and highlighting. This month, however, we are featuring a very neat single stroke letter which will be a valuable addition to our alphabet collection.

This alphabet is of a thin stroke formation and yet is more legible than many letters of much heavier stroke. Of course this type is not used for large cards but should be kept for the better grade of show card which might be used for fashion displays or showings of new spring goods.

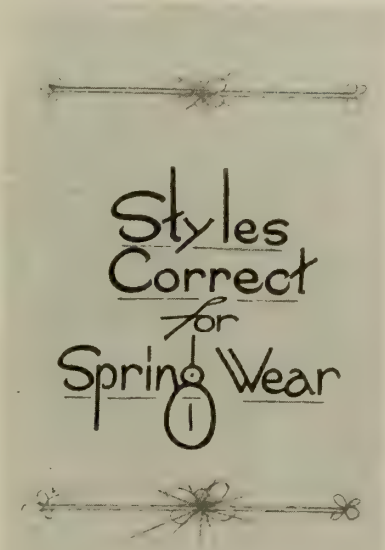


Practice Chart—

The biggest feature about this alphabet is the variety of forms you can change the letters into without losing the character of the lettering; a few of these instances can be seen if you compare the chart with the three completed cards. Take for instance, "F" in the lower case card. Compare that letter with the F appearing on the spring wear card. Here is shown the letter on the slant to the right and the cross bar or stroke 3 parallel with the guide line. Or for another instance take the F of the vegetable card. Here you have the letter made in the upright form but stroke 3 crosses stroke 1 at an angle.

The G also of the lower case can be made in many styles without losing the character of the letter. Compare the various styles used on the three cards with the one shown on the chart and you have only a few of the many that can be made.

The next one to mention and one which is played upon a great deal is the letter S. This letter, when worked up on a show card can be formed in a variety of ways and these forms all depend upon what the letters next to them will allow. As you see, the chart only shows an evenly balanced letter, but a study of the three show cards gives you many ideas of how to work in this letter. For instance the "vegetable" card in two instances shows how the lower section of this letter can be brought below the lower guide line and underneath the letter to its left—all without changing its individuality. The two "S's" on the housecleaning card show the top of this letter or stroke 1 extending much to the right of the rest of the letter.



These are only three of the letters which, upon practice, you will find can be made in other forms that are shown here. Of course if you are a beginner it will be advisable for you to keep to the chart formations for a long time because when you have mastered them you will have done a big work. If you have been a follower of these lessons for some time back you will remember what was advised in regard to the method of handling the brush. However, for this lesson at least we are going to make a slight change in this method. Previously we advised you to hold your brush at a writing angle, but for this we shall ask you to hold the brush at right angles with the card you are working on. The reason for this is it gives you a better control of the brush for making this type of lettering. You must get right up on the end of the brush and keep the brush well filled with color, which should be sligtly thicker than what is commonly used. Work with a free arm movement and don't cramp your fingers up.

When you have mastered the method of formation and the handling of the brush then it only remains for you to practise and of this you cannot do too much, providing always that you are working in the right direction.

For practice work rule out a blank card with the guide lines as shown in the practice chart and select various strokes or combinations of strokes and practice them until each is perfect. You

can go all over each letter in this way and you will find it very helpful.

The upper case of the chart shows a great many plain lines which it should not be hard to master. Balance up each letter properly and don't forget that all strokes should be the same width.

A feature of this alphabet is that the corners, as you will notice, are all cut off with a little angle stroke, which is very effective when they are joined up on a completed show card as you will notice. Care should be taken not to spread the lettering too much over the surface of the cards, and above all remember to show plenty of white background to make the lettering stand out

PARCELS FOR PRISONERS

The Post Office Department at Ottawa sent out the following communication anent parcels for prisoners of war in Germany:

"The German authorities have issued a memorandum to the effect that parcels for prisoners of war interned in Germany must be addressed to the "parent" (or main) camps to which the prisoners belong and must not bear the names of any branch or working camps or of any other place to which the prisoners might be detailed for special services.

The memorandum states that prisoners who have been detailed for services outside the "parent" camps have been enjoined by the German authorities from the very first to inform in this sense any relations or other persons from whom they expect to receive postal parcels. Parcels for prisoners of war in hospitals also come within the meaning of these regulations.

"In the interests of the prisoners it is therefore essential that these regulations should be strictly adhered to as otherwise the German authorities will not deliver the parcels to the prisoners of war for whom they are intended, and it is suggested that persons in Canada, when writing to prisoners in Germany, should ascertain definitely the name of the "parent" (or main) camp so that they can comply with the regulations of the German authorities in addressing parcels to prisoners."

AUTO ACCESSORIES IN PARIS, ONT.

Automobile accessories are an active line in the Donald Sinclair hardware, Paris, Ont. Mr. Sinclair first put in a stock of accessories two years ago, and the history of the department is one of continuous development.

"The hardware store is undoubtedly the place for automobile accessories and trade is growing all the time," says Mr. Sinclair.

He is of the opinion that much of the increasing business is due to the better satisfaction and prices given on automobile accessories by hardware dealers compared with garage men. Mr. Sinclair devotes a window to the display of accessories. He finds that auto tire repairs, garage tools and small repair outfits are among the best selling lines in his accessory trade.

MORE ORDERLY STEEL TRADE PROMISED

The flow of steel is going to be a much more regular and even one in future months than it has been of late, says the "American Metal Market." The trade has had a succession of disturbances, whereas now, in the matter of war activity, there is a settling down to steady work.

The disturbances have been quite patent, but the fact that they are, for the most part, disappearing, may not be so readily noticed. In the early months after the United States declared war there was a contest between peace requirements and war requirements in steel, and a part of the urgency of demand in the former was due to the mental rather than the physical attitude of the buyer. Either he feared that later on there would be no steel for him, or he feared that later on there would be no demand for his product, and the thing to do was to rush all his orders to completion and get the money. All that is long past, and the peace consumption of steel, whatever it may be, has been settling down to a steady gait.

THE CLERKS DEPARTMENT

Importance of Seizing Opportunities

Great Mail Order Millionaire Says Hundreds of Others Could Have Done as Well or Better Than Himself—All They Needed Was the Opportunity—Getting a Chance the Great Thing

OPPORTUNITY! Fame, wealth and fortune on her footsteps wait. Cities and fields she walks. Passing by, soon or late, it is said she knocks unbidden once at every gate. If sleeping, wake. Herein is the story of Julius Rosenwald, one of the greatest merchandising experts the United States has known. He is frank to assert that men with talents equal to his own continue to draw their weekly pay envelope. To him opportunity—getting a chance—is the great thing in life. He points out the only difference between himself and many others with equal talents lies in the fact that opportunity came to him and he grasped it. James B. Morrow gives an intimate picture of this great mail order king in a recent issue in "The Nation's Business." Here is the way he tells the story after an interview with the millionaire merchant:

"I accepted the opportunity," he went on, "more in behalf of a relative than for myself. The business expanded. There are a thousand men in the country who would have done better with that business than myself. But they didn't have it. Some of them, perhaps, are still working on salaries.

"The United States is filled with men who could get rich if they had the chance. General Grant was a leather merchant in a town not far from where I was born. The Civil War turned him into a hero and made him President of the United States."

Regarding Both Sides of the Counter

"But you will admit that he was a great soldier," the interviewer remarked.

"Surely," Mr. Rosenwald answered, "but no one ever would have known it had he been deprived of an opportunity to fight. And that is my argument. Every situation in life has a man, often a multitude of them, capable of meeting and filling it. My philosophy, in the present instance, stops at that point; but there are not enough situations to go around."

"Counsel, then, is useless from a master of money to a candidate seeking a place in the ranks," the interviewer observed.

"Wholly," Mr. Rosenwald replied. "The commonest and shabbiest thing in the world is advice. A normal man does not require it. His conscience or intellect is sufficient. What he wants is an opening. He may seek it or he may find it. Often it will meet him face to face when he is thinking about something else. In that event, his heart should not be filled with arrogance.

"A thousand men, hidden away, getting pay envelopes every Saturday, live and die in comparative poverty. Many are millionaires in everything save money. There is no occasion for them to underrate their ability. Chance has not come knocking at their doors. Nor has the man in the next store, skyscraper or factory, at whose door chance has actually appeared, any reason for over-estimating his own ability. Meekly should he walk in the presence of himself—and of his family."

"But you have had a programme?" the interviewer persisted.

"None whatever. Had I followed a programme, I would still be in the clothing business."

"You know, of course," the writer said to Mr. Rosenwald, "that country merchants complain of having been seriously injured by mail-order houses?"

"Yes, although there are more prosperous and capable country merchants in the United States than ever before. When a man fails he will shift the blame from himself to some one else. He will not admit that he is incompetent. Egotism stops him from doing so. He finds an excuse somewhere for his own shortcomings and convinces himself, if he fails to convince those who know him.

"By his methods Mr. Sears caused other merchants to find ways by which they could meet his competition. The whole retail world was speeded up and grew more efficient. Good merchants became better and bad merchants went out of business.

"Billions of dollars are yearly spent in this country by consumers. Our sales for 1917 will amount to $170,000,000, which is only a small drop in a big bucket. Take shoes, for example. I suppose the American people buy a thousand million dollars' worth of shoes annually. Our sales of shoes will not exceed, say, $8,000,000. Mail-order houses can not monopolize the retail trade of the United States, but they can, in a measure, regulate it as to prices and improve it as to service.

"There is room for all, and all, I hope, will prosper, provided, under the laws of good business, they ought to prosper."

As for Julius Rosenwald himself, as analyzed by himself, everything has been an "acident"; exactly as much of an acident, it will be noted by his story, as would be the argument of a case before the Supreme Court by a lawyer, or the construction by an engineer of a railroad up the slopes and through the passes of a chain of mountains.

"Anyway you have a policy?"

"Only so far as trying to feel that I am always selling merchandise to myself. I would stand on both sides of the counter, if we had a counter."

A Millionaire's Philosophy of Wealth

A member of the Advisory Commission of the great Council of National Defense, the choice of President Wilson himself, Mr. Rosenwald is bargaining for the leather, cloth and duck—many millions of pounds and many millions of yards—required by the American armies at home and in France. His services, of course, are free to the government. Specifically, such is his duty. In general, he shares the work of the war council as a body.

Mr. Rosenwald has none of the mannerisms supposed to be acquired with the amassing of large property. He is middling as to height and weight. His friendly eyes are a blending of brown and gray and his black moustache, shot with white, is clipped close to his lip.

"It is a crime," he told the interviewer, "to pile up money after one has accumulated all that he needs for himself and his family. There is a stage where acquisition becomes a vice. Once that is reached, a man cannot part with any of his possessions, nor can he will it away. He keeps his estate together and at death hands it over to his wife and

children, not that he loves his wife and children more than do other men, but that he can not overcome the infirmity which has awakened his will and character.

"I have my business," Mr. Rosenwald continued. "I want nothing more. Men, sound men, able men, come to me nearly every week with plans that I know are good. 'I wouldn't invest a dollar,' I tell them, 'even if I knew that my profits would amount to 100 per cent. a month.' I am not interested any more in the making of money but I like the fun of giving it away."

His Early Life

A half century ago, the Rosenwalds lived in Springfield, Illinois. Samuel, the head of the family, was a merchant. Probably, he was a native of Germany. Julius, however, was born in America, and on the street where Abraham Lincoln formerly lived. Later, the Rosenwalds moved to a house directly opposite the old Lincoln homestead.

"You were not compelled to split rails in your boyhood," the interviewer said, by way of experiment.

"No, but I peddled chromos," Mr. Rosenwald replied. "The nimble sixpence had to travel pretty hard to get away from me when I was a youngster. I did many things in the way of earning money. Satchels had to be carried and I carried some of them. Also I delivered papers.

"When Lincoln's monument was dedicated, I sold a pamphlet history of the acts leading to the event and made $2.50. General Grant was present and I saw him sitting in a carriage. He was the first man I had ever seen with kid gloves on his hands. They were yellow in color and I looked so long that I have never forgotten them.

"One summer I clerked in a store, where everything was either forty-nine or ninety-nine cents in price. I made my first investment along toward autumn that year. My brother was associated with me in the undertaking. I had $20 saved from my wages as a clerk, and he had about the same amount. We bought a set of china dishes for our mother on the twentieth anniversary of her marriage—had them unpacked and spread out when she came down to breakfast. That was a big day for us boys.

"But a bigger one for your mother," the interviewer asserted.

"And she is living yet," Mr. Rosenwald fondly said, "and writes to me every week and, although she is nearly eighty years of age, her penmanship is without tremor or a blot."

Unconsciously, Mr. Rosenwald was giving a beautiful picture of himself. No doubt he will be surprised to see it in print but there is where it belongs and the writer has no explanation to make for giving a place to it in this rough sketch.

A Rosenwald "Accident"

At sixteen, Julius Rosenwald left home and the public school of Springfield. Maternal uncles lived in New York. Thither he went and his mercantile relatives gave him employment, "but," using his phrase, "of a very subordinate character." Sweeping, possibly; dusting, no doubt, and washing windows.

"One day," to give another snatch of his story, personally related, "I went to a wholesale establishment." I was a clerk by this time and entrusted with important commissions.

"Summer clothing for men—alpaca coats, duck vests and seersucker suits—was the exclusive line of this house," he said. "Business was brisk and the proprietors were in a cheerful and congenial mood. One of them told me that they had received that day sixty more orders, some by telephone, than they could fill.

"I turned this information over in my mind and mentioned it to my uncles. Summer clothing for men, I thought, and they agreed, might do well somewhere else. A location was my first problem. Inquiry showed that a line of such goods had not been developed in Chicago.

"My father supplied me with funds and a cousin became my partner. We leased a loft on the third floor of the Farwell Building. It was in the fall of the year and we began, in a modest way, the manufacture of thin clothing. In the January following we opened our selling campaign, deliveries to be made in the spring and early summer."

"How old were you?" the interviewer asked.

"Eighteen sixty-two from eighteen eighty-five leaves twenty-three and that was my age," Mr. Rosenwald replied. "We did well," he continued, taking up his story, "and nine years later I became acquainted with Richard W. Sears. Then the turning point in my life occurred.

The Birth of an Idea

Mr. Sears was a year younger than myself. Born in a little Minnesota town, he learned to be a telegraph operator. A natural born trader, and always an honest one. I want to say in passing, he began selling watches to the railroad men of his acquaintance. He would buy two or three watches and dispose of them to engineers, conductors and others.

"During his leisure time, while sitting at the telegraph instrument, he would write letters to the operators whom he knew and in that way laid the foundation for his mail-order business. He did so well that he left the railroad business and went into business for himself at Minneapolis, dealing only in watches and selling them by means of circulars and letters.

"Chicago, he thought, would be a better location and so he moved to that city. He had already proved the merit of his idea and was making money. Then, in a year or two, a man came along and offered him $125,000 for his business, provided he would agree not to sell watches again in his own name for a period of three years.

"Mr. Sears was only twenty-five at the time and the sum that he was offered seemed to be an immense fortune. He thought that he would never want any more money. So he sold out, invested $75,000 in farm mortgages, gave the mortgages to his mother and went to Mexico and California on a vacation.

"After traveling for six months, he returned to Minneapolis weary from idleness. A. C. Roebuck, who was much older than himself, formerly had been in his employment as a jeweller. Mr. Sears was attached to Mr. Roebuck and had great respect for his mechanical ability and his character.

"Under the contract he had made in Chicago he was barred for three years from engaging in the mail-order business under his own name. So he organized the A. C. Roebuck Watch and Jewelry Company and re-established himself in Minneapolis. Mr. Roebuck, neither then nor after, had any financial interest in the business. He was always an employee on a salary.

"Once more Mr. Sears prospered. When he was free to do so, he changed the name of his firm to Sears, Roebuck and Company. He had widely advertised the old firm and believed that Mr. Roebuck's name was of considerable value. Therefore, he used it, along with his own, although he was the sole owner of the business.

"Accidents" Continue to Happen

Mr. Sears returned to Chicago in 1895. Up to that time he had sold watches and jewelry exclusively. When he aded a small line of clothing to his stock, I showed him samples from our factory. Thus our acquaintance opened. He told me about his business.

"I had a brother-in-law who was then looking for an opening. He and I went to Mr. Sears and asked him if he felt like accepting us as partners. A bargain was soon made. Mr. Sears put a value of $140,000 on his stock, good-will and so on. The price was satisfactory. I paid him $35,000 and my brother-in-law paid him $35,000. And so the three of us owned the business. We turned the company later into a corporation. Mr. Sears was elected president and I was elected vice-president and treasurer. When Mr. Sears retired in 1908, I succeeded him. He died two years ago, a very wealthy man. Modest, always, and lovable, he was of great service, in my opinion, to the American people. He brought manufacturers and consumers together and saved the latter hundreds of millions of dollars."

The Case for the Mail Order House

The business of Mr. Sears in 1895, by his own statement, was worth $140,000. No money was afterwards put into it. Expansion was made wholly with profits. The shares of the corporation to-day have a market value of $125,000,000. At least $25,000,000 has been taken out of the business in the form of dividends. Sales totalled $500,000 in 1895. They will be three hundred and forty times greater this year."

EVENTS IN THE TRADE

NEW WHOLESALE HARDWARE IN WEST

The Morrison-Blackwood Hardware, Limited, wholesale hardware, are starting in business in Moose Jaw, Sask. Stocks are being bought and an announcement as to when operations will begin may be expected soon. L. A. Blackwood, for many years general manager of the Miller-Morse Hardware Co., Ltd., Winnipeg, and later Merrick-Anderson Co., Ltd., Winnipeg, will be managing director.

BUSINESS CHANGES

Ottawa, Ont.—Star Hardware Company has discontinued business.

Montreal, Que.—Mount Royal Economic Store, hardware, has sold out.

Cornwall, Ont.—J. Pitts, hardware, has sold to Smith & Snetsinger.

Watrous, Sask.—J. E. Robins & Co., hardware, has been succeeded by W. E. Robins.

Finding that the bicycle business was coming along so fast that it demanded his entire attention, A. Clark, proprietor of the Cadet Cycle Works, 1052 Gerrard Street East, Toronto, has closed the phonograph department of his establishment and will devote all his time and energy to bicycle sales and repairs.

PERSONAL

Albert Greenburg, toys and sporting goods, Montreal, was calling on the trade this week.

S. L. Doolittle of the St. Mary's Wood Specialty Company, Limited, of St. Mary's, Ont., has commenced his annual trip and will spend the next two or three months calling on the trade.

Charles Byford, formerly of the Bond Hardware Company, Guelph, has joined the staff of the Mills Hardware Company, Hamilton, as advertising manager.

A. M. Bottcher, purchasing agent for Hyslop Bros., Toronto, automobile and bicycle accessories, has returned after a couple of weeks at various points in the United States on business matters.

L. P. Winslow, who has been salesman for Beatty Bros., Limited, of Fergus, Ont., has been attached to the Fergus branch where he will shortly assume the duties of branch manager.

MONTREAL NEWS NOTES

James Isbister, with Peck, Stow & Wilcox Co., of Southington, Conn., was in Montreal this week calling on the trade.

R. H. Monk, assistant general manager of Brandram-Henderson, Ltd., left on Wednesday for a trip of several weeks to Western Canada. Mr. Monk will go through to Vancouver before he returns.

F. C. Hatch is in Montreal this week in the interests of his firm, the Martin Manufacturing Company of Whitby, Ont.

J. M. Shellenberger representing the firm of Baeder, Adamson & Co., Philadelphia, Pa., was a Montreal visitor this week.

F. C. Dannenberg, representing the Wiss Company and also the Kraeuter Co., was a Montreal visitor this week in the interests of these firms.

H. J. Robinson, late of the George W. Reed Company of Montreal has entered into partnership with E. Cecil Short & Co., ingot metals and chemicals.

George St. James, buyer for the hardware department of the R. H. Williams & Son, general store at Regina, Sask., was a Montreal visitor this week.

HARDWARE STORE BURGLARIZED

Thieves smashed the large plate glass window in the hardware store of J. S. Fraser, New Glasgow, N.S., some time during the night of March 9. After the glass had been broken a considerable quantity of goods was taken from the store window, including revolvers, safety razors and other small wares.

MONTREAL FIRM MAKE MERRY

On Tuesday evening March 12, the members of the firm of A. C. Leslie & Company, Ltd. and staff gave an entertainment to the convalescent men quartered at the Military Hospital on McTavish Street.

The chair was occupied by W. S. Leslie, president of the firm, and the program was in the hands of and provided by members of the staff. Selections were of instrumental, vocal and recitative nature and these were very much appreciated and enjoyed by the men resident in the building.

During the evening the social side was made enjoyable by the serving of refreshments, provided by the visitors and smokes were also brought for the boys, which were very much appreciated.

This splendid class of entertainment has been adopted by the company for several seasons back and it has always seemed well worth while to provide entertainment that would bring the members of the staff closer together and thus disseminate a better spirit as well as contribute to the welfare and enjoyment of others. Last year's function was held in the Old People's Home at Longue Point, when a similar entertainment was provided.

CHANGE IN HARDWARE FIRM

Mackenzie, Milne & Co., Limited, hardware dealers of Sarnia, Ont., as intimated in last week's HARDWARE AND METAL, has undergone some changes through the retirement of some members of the former company. In a statement with respect to the changes of the company T. F. Towers, secretary-treasurer, stated that Peter Paton of Montreal and some others associated with him will take over the stock of those retiring from the company, but that it is not expected that at present any of them will be actively employed in the management of the company. The business is to be conducted as heretofore. The former officers of the company were David Milne, president; George S. Samis, vice-president; T. F. Towers, secretary-treasurer; directors: J. A. Farquharson, Charles MacKenzie, Malcolm McKenzie. It is understood that J. A. Farquharson is one of the members of the former company who has withdrawn.

DEPARTMENT CHAIRMAN ANNOUNCED

President J. R. Dixon of the Canadian Bicycle Dealers' Association, Ontario section, announces the appointment of the chairmen for the various departments of the organization as follows: Grievance Committee, N. S. Ferries, Hamilton; Racing Committee, P. A. McBride, Toronto; Legal Action, H. Howe, Ottawa; Collections, J. R. Dixon, Hamilton; Newspaper Publicity, W. M. Gladish, Toronto. These men have been authorized to add to their numbers as required. Expert legal advice has been secured by the association from a corporation lawyer regarding the effectiveness of a new form of lien for use by bicycle dealers. He has criticized several features and the addition of a salary assignment clause has been recommended. The constitution is being printed and will shortly be distributed.

AIRMAN SERIOUSLY INJURED

The Naval Department at Ottawa under date of March 17 announced that Flight Sub-Lieutenant William S. Anderson, R.N.A.S., son of T. A. Anderson, president of the Merrick-Anderson Company, Limited, Winnipeg, has been seriously injured.

CHANGES IN WHITMAN & BARNES COMPANY

A. B. Hall, vice-president of The Whitman & Barnes Mfg. Co., will have supervision of the company's sales. He has for the past twenty-one years been connected with the company in various sales and official capacities. His early connections were with the company's Chicago sales office as manager, which position he held until his transfer to the general office at Akron, O.

R. S. Carter, district representative of the Whitman & Barnes Mfg. Co., with headquarters in Pittsburgh, has been promoted to sales manager and will have direction of twist drill and reamer sales from the Akron, O., general office.

H. E. Fisher, formerly with the Pittsburgh Model Engine Co., Pittsburgh, Pa., has become associated with The Whitman & Barnes Mfg. Company, Akron, O. He succeeds R. S. Carter as mechanical engineer and will have charge of sales in the Pittsburgh district.

Paul E. Thomas of Chicago, prominent for years in railroad circles in the traffic department of the Seaboard Air Lines, has become connected with The Whitman & Barnes Mfg. Company, Akron, O. His official position is that of sales manager in charge of the department of wrenches and spring cotters.

AUTO AND BICYCLE SHOW

The bicycle and motorcycle dealers of Toronto now have a show proposition under consideration. According to the present understanding, the cycle merchants are to share things with the local automobile accessory retailers. The exhibition is planned for the Arena, the local skating palace, and is scheduled to be held late in April. The matter was discussed at a meeting of the Toronto cycle trade at the Carls-Rite Hotel on March 21, and the subject will be definitely settled at a conference on April 3. The man behind the proposal is W. C. Miller, secretary of the Retail Merchants' Association of Canada.

FIRE LOSSES

Alexander Brown's hardware store at Harriston, Ont., was slightly damaged by fire on March 19 when fire broke out in the McConnell building and spread to the Bailey block in which the hardware store was located. The principal loss occurred in the building in which the fire originated.

CYCLE SHOW MAY 4 TO 11

Manager T. C. Kirby of the Montreal Bicycle and Motorcycle Dealers' Association has made his official announcement regarding the holding of the First Annual Patriotic Cycle Show of Eastern Canada. The show will be held in the Montreal Auditorium from May 4 to 11, inclusive, under the direct auspices of the trade association. An interesting part of the exhibition is that the entire gate receipts will be given to patriotic societies, schools for crippled children and local hospitals and various local organizations are appointing committees to handle the general sale of tickets. A ladies' orchestra has been engaged for the occasion and professional vocalists will sing in the concerts every afternoon and evening.

A CORRECTION

In reporting the recent reorganization of The Dougall Varnish Co., Limited, in our issue of March 16, an error was made in stating that J. Harold Dougall was the new president. Mr. Dougall was elected treasurer and should have been so mentioned.

The new president of the company is J. J. Nicholson, and his name should have been mentioned in connection with the report appearing on page 31 of the last issue of HARDWARE AND METAL.

The office of vice-president and secretary, as accredited to Mr. Ingersoll, was correct, but it is sincerely regretted that the other errors were made.

Mr. Ingersoll was selected as a member of the Board of Directors to fill the vacany created by the death of J. S. N. Dougall.

ADDRESS OF NEWELL MANUFACTURING CO.

An item in "New Hardware Goods" in March 16 issue of HARDWARE AND METAL gave the address of the Newell Manufacturing Company, Limited, as Preston, Ont. This was incorrectly given, as the firm is located at Prescott, Ont.

TO ESTABLISH SHIPBUILDING YARDS

A. M. Rowan, retail hardware, St. John, has purchased the stock of the late James Knox, and the latter business will be closed. The business founded by Mr. Knox and continued by his son until the latter's death recently was one of the oldest ships chandlery and hardware establishments in the city and has been a landmark on the water front for many years.

The St. John Shipbuilding Company, Limited, has announced its intention to proceed immediately with the establishment of steel shipbuilding yards in or near St. John. Thomas Nagle of St. John is managing director and large shipbuilding interests in Great Britain and Canada are said to be interested in the new concern. The company had planned to start last year but difficulty in securing steel plates and other supplies caused a delay.

NO MOTOR LICENSES FOR ALIENS

An order-in-council has been passed by the cabinet of the Ontario Government which forbids granting of licenses to run automobiles to paroled alien enemies. It was pointed out that British subjects in Germany have during the past three years been locked up in internment camps and have had their motor cars confiscated.

DEATH OF HARDWARE BROKER

The death occurred March 10, after a protracted illness, of Edwin H. Bissett, a resident of Winnipeg for nearly 35 years and a well-known business man, being the senior member of the firm of Bissett & Webb, metal and hardware brokers. When deceased first went to Winnipeg he was manager of the Winnipeg Waterworks Company, but entered into private business when the city took over the operation of the plant as a civic utility. He was a man of a retiring disposition, but nevertheless enjoyed a wide acquaintanceship and was highly esteemed. He was an earnest and active member of Knox Presbyterian Church and was for many years on the boad of management and congregational treasurer. Deceased was born at Lachine, Que., on March 10, 1859, and was, therefore, just 59 years of age on the date of his death. His father was James Bissett, a Hudson's Bay Company factor of the old regime. He is survived by his wife and one daughter at home, and a son, Lieut. J. E. Bissett, who is on active service with the British navy, and who, previous to enlisting, had a brilliant career at McGill University.

ADMIT UNFAIR METHODS

Some of the varnish companies in the United States against whom the Federal Trade Commission had made charges of unfair methods of competition have admitted the truth of the charges. In their answers to the commission's complaints three of the varnish companies admitted that the charges were true but expressed their desire to conduct their business in accordance with the law and to refrain from such practices in the future.

The Travelers' Association of Paint and Allied Trades of Pennsylvania in a resolution recently deplored "the system of graft and prostitution of legitimate business methods recently exposed by the commission." Some of the companies, however, are still emphatic in their denial of the charges.

RUSSIAN METAL OUTPUT

Unrest in Russia has not interfered with the production of the rarer metals aside from platinum, though from the nature of things export trade has not grown. Consular reports indicate the following comparisons of production in 1916 and 1917: Bismuth, 1916 none, 1,806 pounds of 60 per cent. ore in 1917; molbydenum, 5,417 pounds in 1916, 7,220 pounds in 1917; tungsten, 72,200 pounds in 1916, 216,680 pounds in 1917.

HARD WORK INCREASES SALES

Hard work is what increases sales. Combine hard, steady work with fair ability as a salesman, and add to that a moderate amount of good advertising, and you have a formula which will compel success in a retail hardware business as sure as fate. But while putting this formula to work see that your clerks are also using it.—"American Artisan."

CATALOGUES and BOOKLETS

Pamphlet on Halters

R. R. Kinread, 286 Bannatyne Ave., Winnipeg, has issued an attractive card in four colors, 9¼ x 14 inches, featuring prominently their line of halters which Mr. Kinread states is for the retailer's use in attracting the attention of customers to his line. Copies will be supplied immediately upon request.

Window Material

A selling campaign has been launched by Imperial Oil, Limited, Toronto, and branches, to increase the demand for oil cook stoves, ovens and cabinets during the spring and summer months. The basis of the appeal will be to save the nation's coal, which is not only expensive but scarce, by using oil. An oil cook stove week from May 6 to 11 inclusive is to be a feature of the campaign, and it is announced a set of window display material will be sent free for the asking to dealers handling this firm's line of products.

B.T. Barn Book

Beatty Bros., Ltd., Fergus, Ont., have issued a new catalogue called the B.T. Barn Book which deals particularly with equipment used in the modern barn.

Photographs of barns in all parts of Canada are shown and it is said many hundreds of dollars were spent in securing these. In addition illustrations of all their barn equipment is shown by this firm along with complete descriptions. This book will, it is said, be sent to farmers or contractors free, if names are sent in.

Accompanying the catalogue, a net price list is included and it is suggested that the merchant take this and insert selling prices right in the catalogue. This would, it is said, eliminate danger of losing prices or worrying over price list left behind when you are miles on your drive interviewing farmers. The catalogue is very attractive and many blue prints to illustrate methods of installing are reproduced.

HARDWARE LETTER BOX

Wonder Stove

A. N. Bourassa & Son, La Fleche, Sask.—Please let us know where we can secure repairs for the Wonder Stove.

Merrick-Anderson Co., Ltd., Winnipeg, Man.—Ed.

Crown A Niagara Range

The McFarland Hardware, Etzikom, Alta.—Kindly advise where we can secure repairs for Crown A Niagara Range.

North Western Stove Repair Co., 22 W. Lake St., Chicago, Ill.

Asbestos Mats

J. H. Slater, Ridgetown, Ont.—Kindly inform me where I can secure asbestos mats for tables.

Canadian H. W. Johns-Manville Co., Toronto; the Asbestos Manufacturing Co., Montreal; the Eureka Mineral Wool & Asbestos Co., Toronto.—Ed.

Manufacturers of Graphite

C. L. Devitt, Ottawa, Ont.—Can you inform me who are manufacturers and dealers in graphite?

Canada Paint Co., Montreal; the Domestic Specialty Co., Hamilton, Ont.; Electric Boiler Compound Co., Guelph, Ont.; Hamilton Facing Mill Co., Hamilton, Ont.—Ed.

Respecting Sale of Formaldehyde

Aiken Bros., Allenford, Ont.—Is it illegal for a hardware store to sell formaldehyde if there is no pharmacy in the town?

There is a law which prohibits the sale of formaldehyde in any store except a pharmacy. While no instances are on record yet of prosecutions having been made, we understand that the College of Pharmacy has in some instances warned dealers that they are liable to be prosecuted if they continue the sale. The fact that there is no druggist in your village would not be a mitigating circumstance should action be taken against you. The farmers will of necessity have to go where they can secure this commodity.—Ed.

TRADE INQUIRIES

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1657. **Agencies.**—A Johannesburg firm of engineers are prepared to put on the Johannesburg market Canadian lines of mining machinery, leather and Balata belting, light rails, ball bearings, engineering specialties, and other lines suitable for the mining trade.

1658. **Horseshoe nails.**—A South African firm with thirty branch stores, asks for samples and quotations of horseshoe nails. Further particulars may be had on application to the Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa.

1660. **Catalogues.**—A Johannesburg firm of wholesale merchants ask for Canadian catalogues in all hardware and kindred lines. Prices must be submitted and details re packing.

1661. **Catalogues and price lists.**—A Johannesburg firm of wholesale merchants ask for catalogues and price lists on all lines of hardware, brushware, handles, woodenware, cartridges, ploughs and agricultural implements.

1662. **Hammers.**—A Johannesburg firm now controlling and securing large business in a special Canadian line, ask for quotations and other particulars on hammers and sledges, all sizes.

1663. **Catalogues and samples.**—A wholesale firm in Johannesburg ask for catalogues or samples when possible in shelf hardware, brushware, handles, shovels, woodenware, and fruit jars.

1664. **Shovels and spades.**—A Johannesburg firm making a specialty of mining supplies, are prepared to take up a Canadian agency on purchase system for shovels and spades. Catalogues and correspondence requested.

1666. **Belting.**—A Johannesburg firm with established connection in belting are prepared to take up the Canadian representation of conveyor belts.

1668. **Catalogues.**—A wholesale firm in Johannesburg ask for catalogues and prices on hardware, all kinds, brushware, handles, tools, ploughs and agricultural implements.

1670. **Electrical material.**—A Johannesburg firm making a specialty in electric material supplies, ask for catalogues and prices on electrical goods of all kinds.

1671. **Steel.**—A Johannesburg firm are prepared to take up the representation on the purchase principle in rough and hard-drill steel. Immediate correspondence requested.

1672. **Agency.**—A Johannesburg commission agent calling on the wholesale trade in the Transvaal is prepared to take up Canadian representation of any of the following lines: Hardware, tools, brushware, nails, wire, enamelware, flour, cereals, foodstuffs, and boots and shoes.

1673. **Catalogues.**—A South African firm with wholesale branches in all centres of South Africa, request catalogues, price lists and other details on any line of Canadian goods suitable for wholesale distribution.

1674. **Mining supplies.**—A Johannesburg firm of many years' standing in the mining trade ask for catalogues or other particulars from Canadian manufacturers of mining and railway supplies, wire rope, machinery, mine cars, tools and other lines.

1675. **Clothespegs.**—A Bristol firm desires to import clothespegs.

1676. **Horseshoe nails.**—A firm in Gloucester wants to purchase horseshoe nails.

1678. **Wood dowels.**—A Bristol firm desires to be put in touch with a Canadian manufacturer of wood dowels.

1679. **Hay fork handles.**—A Bristol house desires to make connections for after-the-war trade with a Canadian manufacturer of hay fork handles.

1680. **Wire nails.**—A Bristol cooperage firm wishes to buy two tons or over of wire nails in gauges 11, 13, 14—1¼ inch, 1¾ inch, 2½ inches.

1681. **Hoe handles.**—Are required by a firm in Bristol.

1682. **Rake handles.**—A Bristol firm is in a position to purchase straight rake handles 1⅛ inch in diameter by 4 to 8 feet in length.

1683. **Manure fork handles.**—A firm in Bristol want bent and straight manure fork handles of 4 feet, 4½ feet and 5 feet in length by 1¼ inch in diameter.

1684. **Navvy pick handles.**—36 inches, 39 inches and 42 inches in length are wanted by a Bristol firm. Mostly the 36-inch length required.

1685. **Hammer and sledge handles.**—A firm in Bristol desires to import these handles in the usual sizes.

1686. **Hatchet handles,** required 14 inches, 16 inches, 18 inches, 20 inches and 24 inches in length by a Bristol importer.

1687. **Felling axe handles.**—A Bristol importer desires to purchase fawn-foot felling axe handles.

1688. **Spade, fork and shovel handles,** required by Bristol concern.

1689. **Mandrill and pick handles.**—These handles are desired by an importer in Bristol.

1690. **Dowels.**—A firm in Bristol wants dowels in lengths of 2 feet 6 inches to 6 feet, with a diameter of ¼ inch to ¾ inch.

1692. **Pastry boards** of white clean wood required by a Bristol house. The pastry boards must not be expensive, and round corners are preferred—in two thicknesses, ½-inch and ¾-inch, and in sizes 16-inch by 12-inch up to 3-inch by 18-inch.

1693. **Broom handles.**—A Bristol concern would be glad to hear from a Canadian exporter of broom handles made of spruce or alder 50 inches by 1⅛ and 50 inches by 1¼ inches.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

FEATURING the various markets this week is the decline of 25c per 100 pounds registered in galvanized sheets. Receipts of stocks which have been in transit for weeks and months are reported; keener competition has developed and a decline has followed.

Following advances made in linseed oil during the past couple of weeks, white lead in oil has gone up 50c per 100 pounds. This is also partially due to the firm situation which has been maintained in the lead market. Putty has gone to higher figures also due to increased cost of linseed oil and the scarcity of whiting. New prices on standard are up 25c and pure 50c per 100 pounds. Linseed oil remains steady at last week's advance, and turpentine, though somewhat easier in the primary market, reveals no change locally over last week's decline.

The strength of the tin market may be gauged in further advances which have been made in solder and babbitt metals. Locally, supplies of tin are reported scarce, being almost unobtainable. Little hope of relief is held out for the next month or six weeks and ingot tin remains around $1.00 per pound. The advance in solder is 2c per pound while best grades of babbitt range as high as 95c per pound.

Cotton twine has advanced 2c per pound during the week and in some quarters it is thought cotton rope and sash cord will undergo revision. Cotton waste remains unchanged with a big demand existing.

Many miscellaneous lines have undergone revision during the week, a big advance being made on all kinds of wood handles. Other lines affected include grindstones, bolt clippers, cotton clothes lines, mitre boxes, hack saw blades and clothes pins, higher prices ruling on each. There are indications that a decline in iron rivets may develop. Business in all lines is reported good.

MONTREAL MARKETS

MONTREAL, March 21.—There have been several changes this week in automobile accessories and these are in such lines as oils and greases, ornaments, patches, grinding compound, hub assemblies, nuts, screws, etc. In the regular hardware lines price changes have been very few. Handles are undergoing revision, the new prices to be very much higher, due to the scarcity of hickory and other material. In view of the high prices for tin it is stated that there may be higher prices soon for retinned lines of tinware. Cotton wrapping twines have been advanced and there is a suggestion that cotton rope prices will soon advance. Ordinary lines of mirrors have been moved up about 10 per cent. There seems to be a feeling generally that prices will tend upward on several lines. Among these will probably be included wire cloth. Some difficulty is experienced in securing certain lines of merchandise and this is likely to manifest itself more or less as the season advances. There is a satisfactory outlook for spring trading.

Patches, Ornaments And Screwdrivers Advance

Montreal.

RADIATOR ORNAMENTS, ETC.—Among the many advances that have been made this week in automobile accessory lines are the following: Radiator ornaments, "Doctor's Cross" are listed at $2.50 each as are also "Wheel and Wings." They are subject to a discount of 37½ per cent. in lots of six, in single lots 33 1/3 per cent. Samson feather-edge patches (cementless) are listed at 60c per doz. and subject to a discount of 37½ per cent. in lots of 24 sets. Creepers with tray are listed at $3.25 and without tray at $2.05, subject to a discount of 33 1/3 per cent. in single lots and lots of 6, 37½ per cent. Four-in-one screwdrivers list at $1.05 each with a discount of 33 1/3 per cent.

Advances Recorded On Auto Greases, Compound

Montreal.

AUTO GREASES, COMPOUNDS, ETC.—Advances have been made this week on special automobile oils, greases and valve gringing compounds. The former include transmission gear grease and Veedol motor greases. The list is a long one and the trade discounts from the various prices are 25 and 10 per cent. Transmission gear oil in barrels is listed at 91c per gallon; in half barrels at 98c and in drums at $1.06 per gallon with discount of 25 and 10 per cent. Clover grinding compound in 4 oz. cans is listed at 55c and in 2 oz. cans at 45c. One pound cans of the same in the various grades, A, B, C, D and E are listed at $1.75 with discounts at 25% in small lots and for full doz. lots 30 per cent.

Hub Assemblies, Pins And Cotters Are Up

Montreal.

HUB ASSEMBLIES, PINS AND COTTERS.—Advances are made this week in cotter pins on which a discount of 37½ per cent. is allowed for lots of 24. The list is 25c per doz. Taper pins listed at $1.30 are subject to a discount of 37½ per cent. for two dozen lots. Advances for cap screws have been made and these apply to A.L.A.M. castellated nuts, hexagon nuts and set screws as well. Hub assemblies for Ford cars without flange and for front wheels are listed at $2.85, with a discount applying of 20 per cent. List on the rear wheel style is $1.85 and the discount 10 per cent.

Mirrors Are Advanced; Handle Prices Withdrawn

Montreal.

MIRRORS, HANDLES, ETC.—Prices have been revised on mirrors. This is probably a result of the recent revisions in the price of glass and the advance is about 10 per cent., applicable to the X L and white enameled lines. Prices are temporarily withdrawn on all lines of handles and new prices are now being figured out. These will be very much higher, the jobbers assert, and in some instances probably will reach as much as 50 per cent. over previous quotations. The scarcity of hickory is given as the reason for this change and also shortage of labor.

Cotton Twines Higher; Will Cotton Rope Follow?

Montreal.

COTTON TWINES, ETC.—Another advance has been made in the price of cotton wrapping twines and this is about two cents per pound on the average. Prices seem to be very wide and these are found elsewhere in the current quotations. The points arises—will cotton rope advance? Some feel certain that it will and in view of the firm market for cotton all around, a revision of prices on rope would not be surprising. A fair amount of business is being done in a sorting way only, at fully maintained prices. Sash cord may be revised also. Seine twine prices have also firmed and following prices obtain: Number 6, 71c; No. 9, 67½; No. 12, 64½c; 15 to 36, 64c and 42 to 100, 63½c per pound.

Stove Outlook Good; Tinware May Go Up

Montreal.

STOVES, TINWARE, ETC.—There is a fair demand for stoves and the amount of business coming is at least seasonable. Within a few weeks there will be a better enquiry and especially for the usual lines of oil stoves that are now popular in many districts during the hot months. It has been suggested that, in view of the strength of the pig tin market, prices may have to be revised on retinned ware and this will be essential, thinks one large manufacturer, if the price of tin remains at its present high level. In the meantime there is a firm tendency. Business for enameled ware and for the usual stock that is in greater demand during spring months, such as galvanized ware, is looking up well.

Refined Oil And Gasoline Steady, Good Outlook

Montreal.

COAL OIL, GASOLINE, ETC.—There has been a seasonable demand for coal oil though the demand is not so heavy as it was during the past few months. Gasoline will now be in greater demand and the number of cars that will be used this year is expected to be greater than ever, particularly in view of the fact that gasoline can be had freely. The season for lubricating oils is nearing too and with the number of orders that are already to hand and those that the travellers will be sending in from now on there is expected to be an increased activity in the oil trade. Prices are unchanged with Royalite selling at 17c; Palacine and Electroline at 20c and gasoline at 32½c per gallon.

Iron And Steel Firm; Country Trade Fair

Montreal.

IRON AND STEEL.—There is a fairly seasonable demand from the country for iron and steel products but the city trade is quiet. With a better outlook for early spring it is likely that there will be a greater demand for these lines, since new work will require a greater supply of iron and steel for repairing machinery, wagons and implements. With prices held firmly and unchanged the following quotations are made.

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 17½-0 19
Black Diamond tool steel, per lb.	0 18 -0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 20-0 21

Trading In Sheets Is Somewhat Lighter

Montreal.

SHEETS AND PLATES.—There is not a great deal of activity in the sheet and plate market. As a matter of fact some sizes and gauges are scarce and this reduces trading to a small compass in these. Generally speaking there is a better feeling regarding future deliveries and one large importer stated to HARDWARE AND METAL that they were getting more supplies through in the last week or so than had come forward in months before. This, they stated, would materially relieve the scarcity with which many of the manufacturers had been confronted and a much better situation prevailed with them than has obtained for some time. Prices are held without change.

BLACK SHEETS—		100 lbs
10 gauge	$8 00	$11 50
12 gauge	8 65	10 50
14 gauge	8 80	7 90
16 gauge	9 00	8 00
18-20 gauge	9 25	7 80
22-24 gauge	9 40	7 85
26 gauge	9 45	7 90
28 gauge	....	8 00
10¾ oz. (28 English)	10 55	10.75
GALVANIZED SHEETS—		
10¾ oz.		$10 00
28 ga.		9 65
26 ga.		9 25
22 and 24 ga.		9 05
20 ga.		8 85
18 ga.		8 85
16 ga.		8 70

Lead And Zinc Products Hold Firm

Montreal.

LEAD PRODUCTS.—There is not a great deal of change in the condition of the lead products line. In speaking with manufacturers it was intimated that there seemed to be some difficulty in procuring supplies, but of course this is not the season of activity for such lines as plumbers and others require. Some business is being done on the basis of maintained prices and with the arrival of spring there will probably be a better feeling among the trade with a consequently better demand.

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	
Lead wool, lb.		0 14
Lead sheets, 3 to 3½ lbs. sq. ft., lb.	0 12½	0 13

Cut sheets, ¾c lb. extra, and cut sheets to size, 1c lb. extra.		
Solder, strictly, lb.	0 41½	0 47
Solder, commercial, lb.	0 42½	0 45
Solder, wiping, lb.	0 42	0 42½
Zinc sheets, casks	0 26	0 30
Do., broken lots	0 28	0 32

Old Iron And Steel Firm; Other Prices Held

Montreal.

OLD MATERIALS.—There is a firm tone to the markets this week again, although there is no change in the condition of trade. Firmness is characteristic of the iron and steel scrap market although there is not much movement. It is pointed out that, while prices here have been fairly good for scrap metals, there is a very restricted outlet as compared with the dealers in United States points. However, there have not been any complaints here that prices are too low. Without change in any of the commodities, either brass, copper, old rubbers, etc., prices being paid are as follows:

Tea lead	$ 0 05	$0 06½
Heavy lead pipe	0 06¼	0 06½
Yellow brass	0 13½	0 14
Red brass	0 22½	....
Light brass	0 08	....
Scrap zinc	0 05½	0 06
Heavy copper	0 22	0 23
Wrought iron, No.1, per gr. ton	27 00	....
No. 1 machinery cast	31 00	32 00
Heavy melting steel	20 00	21 00
Pipe scrap	18 00	20 00
Stove plate, per ton	18 00	19 00
Old rubbers, boots and shoes.	0 08	0 08½
Overshoes, lumbermen's rubbers	0 07	....
boots		
Bicycle tires	0 04¼	....
Auto tires	0 04½	0 05½
No. 2 busheling	13 00	14 00

Manila And Sisal Rope Are Held Without Change

Montreal.

ROPE AND CORDAGE.—The situation on rope is one of continued firm tendency. There have been no changes and the trading for the immediate present is rather on the quiet side. With the opening of navigation there will be some new activity, it is expected. In view of the agreements just reached in the United States between manufacturers and the dealers, and sanctioned by the government's war board, it is expected that there will be a settling down to prices and a more general enquiry by those who have deferred their buying until these matters were settled. Prices are given in current market quotations.

Tin Licenses May Be Had At End Of Thirty Days

Montreal.

INGOT METALS.—There is some expectancy with regard to the future of ingot tin imports. Within a period of thirty days it is thought new licenses may be granted for the import of tin into Canada again. This is not a certainty, but the present ruling forbids that any shipments leave England within this period. Hope is expressed that by the second or third week in April some tin may be forthcoming. General trading in ingots is rather light.

COPPER.—There is a fair amount of

trading in copper. Prices are maintained without change. There is a little improvement across the line in the matter of distribution although the quantities available for war purposes are absorbing most of the supply. As matters point there will be a greater amount available for regular trade requirements in the near future. Trading here is being done at 33 to 34c per lb.

LEAD.—There is somewhat of a scarcity here and the demand is fair. In the United States markets there is somewhat of an easier tone but the local quotations still hold at 10½c to 11c per lb.

TIN.—Trading in tin is very much confined. In view of the fact that further supply will not be available for at least six weeks, importers state that the spot quantities will not permit of much trading. One dollar per pound is considered as about the lowest ruling price this week.

SPELTER.—There is somewhat of an easier feeling in the spelter market. This is in sympathy with the feeling in United States markets, which has eased owing to large offerings of the product. Prices range from 10c to 10½c per lb.

ANTIMONY.—There is little trading being done here in antimony and while prices are maintained the feeling is somewhat easier. The price is shaded this week to 18c per lb.

ALUMINUM.—Since the fixing of prices by the United States government there will be little manipulation of prices here, it is likely. However, as prices are not yet settled for the smaller lots that will be asked for throughout the trade quotations remain at 55 to 57 cents.

TORONTO MARKETS

TORONTO, March 21.—Activity has marked the various markets during the week and price changes have been numerous. The lines which have undergone revision cover a large field and include such items as cement, cotton twine, galvanized sheets, solder, babbit, grindstones, tool handles, etc. In practically all cases the tendency has been upward though a decline of 25c per 100 pounds in galvanized sheets has been made in some quarters. Solder advances 2c per pound to new levels and babbit metals in the higher grades are quoted as high as 95c per pound.

Spring business in all lines seems to be opening up well and reports from all sources indicate improvement in the demand for and movement of goods.

Hose Bands Higher; Hack Saw Blades Up

Toronto.

HOSE BANDS, HACK SAW BLADES.—New prices which represent decided advances have been issued on Clancy hose bands which are now selling for the ½-in. at $4 per gross and the ¾-in., $4.50 per gross.

Hack saw blades have also shown an upward tendency, prices ranging as follows: 8-in., $10; 9-in., $11; 10-in., $12; 12-in., $15 per gross. Orders for half gross are subject to a special rebate of 5 per cent.

Clothes Pins Higher; Mitre Boxes Up

Toronto.

CLOTHES PINS, MITRE BOXES.—Spring clothes pins show an advance during the week 10c per box of two gross and are being quoted at $1.10 per box. Common clothes pins have also changed and new prices show an upward tendency. In 5 gross boxes 4-inch, loose, are quoted at from 90c to $1 per case, and 4 gross boxes, in cartons, at 95c to $1.10. Gem folding mitre boxes show a higher price in quotations issued during the week of $2.35 each.

Knife Sharpeners Up; Stainless Steel Carvers In

Toronto.

KNIFE SHARPENERS, CARVERS, WATCHES.—Kant-break knife sharpeners have registered a 10 per cent advance and are being quoted at $4.50. A shipment of stainless steel carvers, in pairs, has reached the city, and these have celluloid handles, square and oval, and are being quoted at $5.50 per pair. In some quarters Boyproof watches are now being sold at $1.25, which represents a slightly upward tendency.

Blacksmiths' Vises Higher; Also Anvil Tools

Toronto.

BLACKSMITHS' VISES, ANVIL TOOLS.—During the week an advance has been made in the price of Peter Wright blacksmith vises, 40 lbs. and up now selling at 28c per pound. It is said these are extremely hard to procure and stocks are by no means heavy. Blacksmiths' anvil tools, such as hardies, hot and cold chisels, flatters, etc., have also undergone revision and the price of 35c per pound now being quoted shows an upward tendency.

Advance On Handles Of 10%; New Discount

Toronto.

HANDLES.—New discounts, which provide for an advance amounting to about 10 per cent. have been issued on handles and other wood hardware. All hickory handles, which will include axe, sledge, pick and hammer are now subject to a discount of 10 per cent. Ash and maple handles, including ash harvest tool handles, wood hay rakes, horse pokes, etc., are subject to a discount of 20 per cent. Neck yokes, whiffletrees and doubletrees have been revised and are being quoted at a discount of 10 per cent.

Grindstones, Loose and Mounted, Advance

Toronto.

GRINDSTONES.—New prices have been issued on grindstones during the week and represent advances both in those that are loose and the mounted ones as well. The advanced prices on grindstones less than 40 lbs. is $2.75, and from 40 to 200 lbs., $2.25 per 100 lbs. Some quotations are being made on a lower basis of $1.90 per 100 lbs. for 40 lbs. and under, and $1.80 for 40 lbs. to 200 lbs. The new prices on mounted grindstones show an advance of 35c each to make $6.25 best quotation available today.

Cotton Twine Up; Clothes Line Also

Toronto.

COTTON TWINE, CLOTHES LINE.—An advance of 2c per pound is apparent in the new quotations issued on cotton twines during the week over low quotations formerly ruling. The lowest prices now available are for 3-ply, 54½c; 4-ply, 58c; 5-ply, 58½c; 4-ply variegated, 62½c per pound. Cotton clothes lines have also undergone revision upward and are quoted at the following figures: 40 ft., $2.90; 48 ft., $3.45; 72 ft., $5.15; 100 ft., $7.20 per dozen.

Bolt Clippers Higher; Cement Up 10c

Toronto.

BOLT CLIPPERS, CEMENT.—A further advance in Easy and New Easy bolt clippers has been put into effect during the week and prices are now at a very high level. Quotations now available are for the New Easy No. 0, $3.75; Easy No. 1, $4.75; No. 2, $6.75; New Easy No. 3, $9 each. The change in freight rates has affected prices on cement and an advance of 10c per barrel has been made. Little interest seems to be manifest in cement as yet, business only representing a small percentage of that prevailing one year ago. This is explained in that few contracts were carried over the winter and practically nothing new has started in the building line. Municipalities are also being held back in starting new work. New prices for cement are $2.70 per bbl. in car lots; $3.25 per bbl. in small lots with a rebate of 5c for payment in 20 days.

Wire Nails In Good Demand; Steady

Toronto.

NAILS, WIRE.—Wire nails are moving out to retailers in fair quantities, which indicates increased interest by the trade. From country points it is thought farm building will be indulged in to quite an extent and this business is solicited strongly. No change in the base price of $5.20 per 100 pounds has been made, and a firm undertone is apparent. Cut nails are holding unchanged at $5.65 per 100 pounds base. Quotations on smooth steel wire show no change for the week, the base of $6.25 per 100 pounds being maintained.

Demand For Gasoline Improving; Supplies Better

Toronto.

OILS, GASOLINE.—With the break

to more nearly spring weather the motorist is getting his car limbered up and sales of gasoline are reported as increasing. Supplies are reaching the market in better quantities and this is also apparent in coal oil. A scarcity of Palacine was indicated in last week's issue but this has been overcome to some extent. Gasoline is being quoted at 31½c per gallon which shows no change. Royalite coal oil is steady at 17c per gallon and Palacine at 20c. Lubricating oils remain firm at prices shown in current quotations.

Increased Demand For Oil, Gas and ElectricStoves

Toronto.

STOVES, ENAMELWARE.—With the break to milder weather, increased interest is being manifested in oil, gas, and electric stoves and ranges, and a growing demand is being made on local stocks. Shipments are going forward in good shape and the congestion resulting from the recent strike is slowly clearing. Cast and steel ranges are enjoying a very good sale, and though stocks are by no means heavy, orders are being taken care of in most instances satisfactorily. Enamelware shows little change. The demand is good, but great difficulty is being experienced in filling orders complete. Shortages exist in many lines and no hope is held out that stocks of these will show great, if any, improvement. Prices on stoves and ranges, tin and enamelware show no change during the week.

Bars Going Forward Freely; Prices Unchanged

Toronto.

IRON AND STEEL.—A very free movement of bars has developed during the week and business is opening up splendidly. Stocks in nearly all lines are reported to be in very good condition and prices are holding steady.

TORONTO—	Per 100 lbs.	
Common bar iron	....	$ 5 25
Common bar steel	....	5 50
Refined iron	....	5 65
Angle base	....	5 75
Horseshoe iron	....	6 50
Tire steel	....	5 70

Spring steel	9 50	11 50
Mining drill steel	19 00	30 00
Sheet cast steel	0 42	0 45
Tool steel	0 20	0 42

Galvanized Sheets Decline 25 Cents

Toronto.

SHEETS, PLATES.—A decline occurred in galvanized sheets during the week of 25c per 100 pounds. Increased receipts of sheets are reported arriving and keener competition for business is developing with the improvement in stocks evident. The demand is very good and the advent of milder weather is expected to result in a fairly free movement to the trade. Prices on 10¾-oz. galvanized sheets now range from $9 and $9.25 to $10.50 per 100 pounds. Black sheets remain unchanged for the week. Stocks of lighter gauges are good but a shortage in supplies of the heavier is reported. The demand is seasonable.

BLACK SHEETS—	Per 100 lbs.	
10 gauge	$10 00	$12 00
12 gauge	7 55	10 10
14 gauge	7 45	8 40
16 gauge	7 30	8 50
18-20 gauge	7 30	8 05
22-24 gauge	7 35	8 10
26 gauge	7 40	8 15
28 gauge	7 50	8 25
3/16-inch plate	10 25	....
¼-inch boiler plate	10 00	....
GALVANIZED SHEETS—		
10¾ oz.	$9 00	$9 25 $10 50
U.S. 28	8 70	8 95 10 20
U.S. 26	8 40	8 65 9 90
22 and 24	8 25	8 50 9 75

16	7 95	8 20 9 45
14	7 85	8 10 9 35

Improvement In Demand Corrugated Sheets

Toronto.

CORRUGATED SHEETS, EAVETROUGH.—Business is opening up very well in corrugated sheets, orders for immediate shipments coming to hand in good volume. The same condition may be said to apply to eavetrough and conductor pipe, increased interest becoming apparent in the trade during the week. The markets are holding firmly and little if any change in prices is anticipated. Prices in eavetrough and conductor pipe will be found in current market quotations. Corrugated sheets are quoted as follows:

TORONTO—	Per 100 Sq. Feet Galvanized	Painted
No. 28 gauge	$ 8 25-$ 8 75	$6 75-$7 25
No. 26 gauge	9 00- 9 50	7 75- 8 25
No. 24 gauge	13 00-	10 50
No. 22 gauge	16 00-	13 25
No. 20 gauge	19 00-	16 50
No. 18 gauge	23 00-	20 00

Discount 7½%.

Indications point to a change in the discount applying to iron rivets becoming effective. The new discount will provide for a decline, and it is thought will influence prices to a 10 or 12½ per cent. lower level. This will apply to black, tinned and coppered iron rivets, it is said.

Wrought Pipe Prices Unchanged; Boiler Tubes

Toronto.

WROUGHT PIPE. BOILER TUBES.—Little of interest has developed in wrought pipe during the week. Supplies are equal to the present limited demand and prices show no change. Some improvement in the movement of pipe is expected with the change to milder weather. Prices are given in current quotations. Present stocks of boiler tubes are at a very low ebb, but the demand is of course limited. Shipments are not expected prior to the month of May and at that time it is thought there will be ample arrive to carry along an improved trade. Prices are not expected to show any great variation. Present quotations are:

Boiler Tubes—	Cold Drawn	Lapweld
1 inch	$36 00	$ ....
1¼ inch	40 00	....
1½ inch	43 00	36 00
1¾ inch	43 00	36 00
2 inch	50 00	36 00
2¼ inch	53 00	38 50
2½ inch	55 00	42 00
3 inch	64 00	50 00
3¼ inch	....	58 00
3½ inch	77 00	60 00
4 inch	90 00	75 00

Solder Up Another 2c; Babbitt Metals Advance

Toronto.

LEAD AND ZINC PRODUCTS.—Featuring an otherwise quiet market, solder has again climbed in price 2c per pound, bringing quotations to a new high level. The low prices shown below are quantity prices, and ordinary shipments would range from 2c per pound higher to the higher prices shown. Tin is very scarce and even at present high prices practically unobtainable. No relief from the present shortage is expected to develop for a month or six weeks. Apart from its effect on solder this condition in tin has had a strengthening influence on babbit metals, the higher grades now being quoted as high as 95c per pound. The range now runs from 14c to 95c per pound. No change in lead pipe, traps or bends or sheets has been made, prices holding at the folowing levels:

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	
Lead wool, lb.		0 16
Lead sheets, 3 to 3½ lbs. sq ft., lb.		0 13¼
Lead sheets, 4 to 8 lbs. sq. ft.		0 12½
Cut sheets, ¾c lb. extra, and cut sheets to size, 1c lb. extra.		
Solder, gauranteed, lb.	0 54¾	0 55
Solder, strictly, lb.	0 46¾	0 50
Solder, commercial, lb.	0 42¼	0 50
Solder, wiping, lb.	0 40¾	0 45¼
Solder, wire, lb.	0 50½	0 58½
Zinc sheets, per lb.	0 26	....

Iron Prices Unsettled; Licenses Being Granted

Toronto.

OLD MATERIALS.—All prices on scrap iron are unsettled and there is a possibility that slightly lower quotations may prevail. The prices shown below are correct to last sales made but little activity has been apparent during the past week or ten days, and little interest is expected to develop for a further short period. Licenses to export are being granted by the government in many lines and business shows little real disturbance. What may develop is somewhat hard to determine and only time will reveal the certainty in the future. Prices remain unchanged on the following basis:

Tea lead	$ 0 04½	....
Heavy lead pipe	0 07	0 07½
Yellow brass	0 12	0 13
Red brass	....	0 21
Light brass	....	0 09½
Heavy zinc	0 06	0 06½
Heavy copper	0 21½	0 22
Stove plate, per ton	17 00	18 00
Old cast iron, per ton	25 00	26 00
Overshoes, trimmed Arctics	....	0 06¼
Auto tires	0 04½	....
Bicycle tires	0 03½	....
	Per gross ton.	
No. 1 railroad wrought	26 00	27 00
No. 2 railroad wrought	15 00	16 00
Pipes and flues	....	12 00
No. 1 busheling	16 00	17 00
No. 2 busheling	....	12 00
Country mixed scrap	....	16 00

Waste Moving Freely; Oakum Unchanged

Toronto.

WASTE, OAKUM.—Capacity produc-

tion is being maintained by manufacturers of waste, and a big movement is reported. Some improvement in commercial demands is apparent and it is thought prices will be maintained firmly for a period of two or three months. Oakum is dull and uninteresting, a limited demand and inactive market prevailing. Prices on oakum and waste appear in current quotations.

Big Shipments of Belting Going Forward

Toronto.

BELTING.—The splendid movement of belting continues and reports state night work is being indulged in to take care of the business. A very firm undertone is evident in the market but an advance is not anticipated for the present. An improved demand exists for tap soles and lifts. Prices remain unchanged.

Ready Roofings Are Moving More Freely

Toronto.

READY ROOFINGS.—The spring demand on roofings is making itself felt somewhat and business shows better development during the week. Orders are beginning to move out in fair volume for both roofing and building papers. Prices remain unchanged at figures shown in current market quotations.

Little Movement In Rope; Prices Firm

TWINE, CORDAGE.—There is little movement in rope at present, but it is thought that business will soon open up and a freer buying demand be created. Prices remain unchanged, the pure Manila selling at 39c base per pound; British Manila at 33c, and sisal at 27½c. Prices on other lines will be found in current market quotations.

Following the settlement of binder twine prices, quiet prevails and nothing of note has occurred during the week. Prices appear in current market quotations.

Marking Time in Ingot Metals

Toronto.

INGOT METALS.—The iron and steel industry shows a disposition to mark time in anticipation of changes which may be made by the United States government on March 31, when the present schedule expires. Any change in price will undoubtedly affect Canada as well but forecasts are not being made as to the possible outcome. Tin is scarce and practically unobtainable, while little interest centers around the other metals. A distinct improvement in transportation conditions is remarked.

COPPER.—There are few outstanding features in connection with copper trading. Although June 1 is some weeks away yet, the tendency is to watch and see what will happen on that date when the United States' price agreement expires. No change in the price of 30c to 32c per pound is reported locally.

TIN.—The outstanding feature of the tin market is that it is scarce and hard to get. Canadian dealers find it hard to get much of it past United States officials. Deliveries are not improving and it is said the market must look to Chinese product for supplies. The quotations locally remain unchanged at from 95c to $1 per pound. The primary market remains very firm.

SPELTER.—Spelter is quoted here at 9¾ to 10½c per pound, showing no price change. Small quantities of cheaper spelter are finding their way to the New York markets, but these are not sufficient to change values, and cannot be accepted as reliable indications of real values.

LEAD.—Little change is apparent during the week. Prices remain unchanged locally at 9¼c to 10c per pound. The primary market is holding firm and deliveries are being made in fair volume. Difficulty in transportation is still apparent.

ANTIMONY.—Demand continues very light and the market attracts little attention. Quotations locally range from 16½c to 18c per pound.

ALUMINUM.—No change in the price of 60c per pound has been made during the week. Stocks are by no means heavy, government work absorbing practically all supplies. In the primary a quiet market exists at the newly-established price.

PIG IRON.—Slight improvement continues in receipts of coke but Canadian production shows little improvement as yet. The demand is heavy but little disposition is evidenced to accept business. Foundry iron shows no change in price, being quoted at $49.50 per ton.

LONDON MARKETS

LONDON, March 21.—A very firm situation exists in practically all markets, and many lines have undergone revision upward. Included in the list of lines advancing are wood handles, wood faucets, ash sifters and safety razors. Deliveries are very slow from factories at present, with small chance of any improvement just now. Business has been good during the week, an active demand existing for spring lines. Garden seeds are meeting with a ready sale. Collections are good.

Handles Make Big Advance In Price

London.

WOOD HANDLES.—New discounts just issued on wood handles disclose a big advance in these lines. This affects axe, hammer, sledge and pick handles, in addition to other lines. Discounts are now arranged as follows: All hickory goods, 10 per cent.; all neck yokes and whiffletrees, 10 per cent.; all doubletrees and cross bars, 10 per cent.; all other goods of ash and maple, which includes hay fork, manure fork, shovel, rake and hoe handles, 20 per cent.

Ash Sifters Go Higher; Wood Faucets Up

London.

ASH SIFTERS, WOOD FAUCETS.—During the week a new price has been issued on the Banner ash sifter, which shows an advance of 45c over former quotations. The revised price on these is $3.35 each.

Wood faucets, genuine Redlich, have also undergone revision upward, and are being quoted as follows:—No. 2, $1.25; No. 4, $1.60; No. 6, $2.25 per dozen.

Safety Razors Advance; Roller Skates Unchanged

London.

SAFETY RAZORS, ROLLER SKATES.—The Gem Junior safety razor is featured in a decided advance during the week, which has necessitated a revision in the resale price to the consumer. The present wholesale price is $12 per dozen, and these are to retail at $1.50 each.

Roller skates are in more active demand with the disappearance of the snow. Prices show no changes at the following figures:—No. 230 steel wheel plain bearing, 75c; No. 236 steel wheel ball bearing, $1.60; No. 6 union ball bearing, $2.40 per pair.

Wire Nails Unchanged; Rope Holds Steady

London.

NAILS.—A fair demand is evident for wire nails, orders being placed with somewhat greater freedom by the retailer. No change has been made in quotations, which hold firm at $5.20 base per 100 pounds. Cut nails are being quoted at $5.60 base per 100 pounds.

Little movement of rope has been apparent during the week, and no fluctuation of prices is evident. Quotations are for pure Manila, 39c; British Manila, 33c; New Zealand hemp, 33c; sisal, 27½c base per pound.

Stovepipe Dampers Up; Wire Cloth Firm

London.

STOVEPIPE DAMPERS AND WIRE CLOTH.—A revision in cast stovepipe dampers shows higher prices ruling for these. Quotations now being made for the 6-inch are $1.20 per dozen, and 7-inch, $1.50 per dozen.

Screen wire cloth is holding very firm, though no change is represented in prices given herewith:—Galvanized, 100-ft. rolls, $5.50 per 100 sq. ft.; painted black, 100-ft. rolls, $3 per 100 sq. ft.; bronze, 14c per sq. ft.

Putty Makes Further Advance; Pure Higher

London.

PUTTY.—Standard putty has undergone a change in price during the week, and an advance of 25c is recorded. This makes price on the 25, 50 and 100-lb. drums $5.40 per 100 pounds. The differ-

ential on pure putty is also changed, it now being $2 against $1.75 formerly prevailing, so this makes the advance on pure 50c. Quotations on 25, 50 and 100-lb. drums, pure, are being made at $7.40 per 100 pounds.

Fifty Cent Advance Made In White Lead

London.

WHITE LEAD.—The extremely high price of linseed oil and the firm situation existing in the lead markets has resulted in an advance of 50c per 100 pounds being recorded in white lead in oil. The demand is not heavy and little movement is apparent. Present quotations are now being made as follows:—Pure, in ton lots, $16.20; less than tons, $16.55; pure Elephant, in ton lots, $16.70; less than tons, $17.05 per 100 pounds.

High Levels Held On Linseed Oil; Turps Steady

London.

LINSEED OIL, TURPENTINE.—New prices established last week on linseed oil have held firmly. The flax market in Winnipeg shows little variation for the week, and a somewhat steadier tone to oil has resulted. Present quotations are:

	Raw, per gal.	Boiled, per gal.
1 to 2 bbls.	$2.00	$2.03
3 to 5 bbls.	1.97	2.00
6 to 9 bbls.	1.97	2.00

5-gal. lots add 10c gal.

Turpentine remains unchanged over decline recorded last week of 2c gallon as follows:—

1 bbl. lots	70c Imp. gal.
2 to 4 bbl. lots	69c „ „
5-gal. lots	80c „ „

Prices On Paris Green Firmly Maintained

London.

PARIS GREEN.—No disposition to change Paris green prices is evident, and more concern is felt over the question as to whether adequate supplies will be available as the season approaches. Orders are being accepted on the following basis:

	Per lb.
½-lb. packages	66½c
1-lb. packages	64½c
25-lb. drums	62½c
50-lb. drums	61½c
100-lb. drums	61½c

WINNIPEG MARKETS

WINNIPEG, March 21.—Markets for the past week have again been very active and especially in a number of the heavy goods lines such as clay picks, rock picks, pick mattocks, long cutter mattocks, grub hoes, crow bars, coil chain and fencing; other lines on the upward move include plaster of Paris, 2 in 1 shoe polishes, baseballs, pumps and harvest tool handles. Business for the past week has been good, jobbers rushing out spring cars as fast as possible in order to protect their customers against the advanced freight rate.

Coil And Log Chain In Big Advance

Winnipeg.

COIL AND LOG CHAIN.—Chain manufacturers have revised prices on coil and log chains which show heavy advances over last year's prices, ranging from $2.90 to $4.50 per 100 lbs. according to size. Prices were made effective by the manufacturers on January 1 but are only now being put into effect by Winnipeg jobbers where stocks were fairly heavy. New stocks now coming in have forced prices up to market values. Attention is also called to the fact that in future the base price on chain will be 1 inch instead of ⅜ inch as heretofore. Prices now prevailing are quoted as follows:

Coil Chain—3-16 in., $18.50; ¼ in., $13.65; 5-16 in., $12.20; ⅜ in., $11; 7-16 in., $10.70; ½ in., $10.40; ⅝ in., $10.25; ¾ in., $10.15; ⅞ in., $10; 1 in., $9.90 per 100 lbs.

Log Chains—5-16 in., $14; ⅜ in., $12.80; 7-16 in., $12.50; ½ in., $12.20 per 100 lbs.

Picks, Mattocks, Grub Hoes, Crow Bars Up

Winnipeg.

PICKS, MATTOCKS, GRUB HOES, CROW BARS.—New prices just received from the manufacturers show fairly heavy advances in clay picks, rock picks, pick and long cutter mattocks, grub hoes, and crow bars. These have been made necessary by higher costs of production. For comparison former prices as well as those ruling to-day are herewith quoted:

	Old prices	To-day's prices
Clay Picks—		
5-6 lbs., per dozen	$ 8 50	$ 9 75
6-7 lbs., per dozen	9 00	10 40
7-8 lbs., per dozen	10 00	11 25
Rock picks, per dozen	....	11 25
Pick mattocks, 5½ lbs., doz.	10 00	11 00
Long cutter mattocks, 5½ lbs., per dozen	10 00	11 00
Grub hoes, 3½ lbs., per dozen	8 00	8 40
Crow Bars—		
Wedge point, chisel point, per 100 lbs.	8 50	9 25
Claw bars, per 100 lbs.	....	10 75

Harvest Tool Handles Go To Higher Levels

Winnipeg.

HARVEST TOOL HANDLES.—Transportation difficulties in the United States have made the deliveries on hickory billets very uncertain and practically all eastern stocks are depleted. This has caused prices to advance on all lines of harvest tool handles which are quoted to-day at 38 per cent. off manufacturers' list. Net prices figured on this basis follow:

Best hay fork handles, extra hickory—4 ft., $2.65; 4½ ft., $2.90; 5 ft., $3.40; 5½ ft., $3.75 per dozen.

Strapped and capped—4 ft., $5.15; 4½ ft., $5.40; 5 ft., $5.90 per dozen.

Manure fork handles—4 ft., $3.10; D top, $5.35 per dozen.

Manure fork handles, strapped and capped—4 ft., $5.60; D top, $7.85 per dozen.

Straw fork handle—4½ ft., $3.40; 5 ft., $3.85 per dozen.

Hoe handles—4½ ft., $2.15 per dozen.

Rake handles—5 ft., $2.60; 5½ ft., $3 per doz.

Woven Wire Fence Makes 5% Advance

Winnipeg.

WOVEVN WIRE FENCE.—A further advance of 5 per cent. has just gone into effect on all lines of woven fencing. However, practically all dealers have their stocks bought at old prices and only further purchases will be affected. Reports indicate that fencing has been moving very freely so far this year even at the high prices. Stocks which were well assorted at the first of the year are now somewhat broken, awaiting shipments at the opening of navigation. Owing to the many difficult styles of fencing it is almost impossible to quote in these columns but prices will be supplied by any Winnipeg jobbers on application.

5 To 50 Per Cent. Increase In Baseballs

Winnipeg.

BASEBALLS. — Baseballs manufactured by Reach and on which they establish resale prices again move up in price showing advances of from 5 to 50 per cent. These are due it is said to shortage of raw materials and increased labor costs. The following are the new prices on some of the more familiar numbers: No. 0, $13.50; No. 1, $12.00; No. 2, $10.80; No. 4A, $8.00; No 7, $6.00; No. 9, $2.10; No. 11, $1.20; No. 12B, 80c doz.

Shoe Polishes And Plaster Of Paris Higher

Winnipeg.

SHOE POLISH, PLASTER OF PARIS.—Owing to increased costs of manufacture prices have advanced on 2 in 1 shoe polishes. The new price at which these are now selling at is $1.20 per doz.

A slight revision has been found necessary on plaster of Paris which moves up to $4.50 in barrels, smaller quantities being quoted 2½c per pound.

Pumps And Cylinders Advance About 7½%

Winnipeg.

PUMPS.—Due to increased costs, Beatty Bros. have issued a new price list covering their entire line of pumps and pump cylinders. New prices are about 7½ per cent. over former quotations. They are now being sold to the trade at 30 per cent. off list F.O.B. Winnipeg.

Linseed Oil And Turpentine Unchanged

Winnipeg.

LINSEED OIL, TURPENTINE. — Linseed oil last week touched the high water mark, being quoted at $2.00 for raw and $2.03 for boiled due to inability to secure sufficient seed and lack of transportation. The market, however, seems to be slightly easier, flax seed showing a decline during the week. Prices in the meantime remain as quoted above.

The turpentine market continues to hold firm with shipments light. Prices remain as formerly quoted: Barrels 80c gal.; ½ barrels, 83c gal.; 5 gal. lots, 85c gal.; 1 gal. lots, 85c gal.; plus the usual extras for containers.

PITTSBURG MARKETS

PITTSBURG, Pa., March 21.—In current discussion of the iron and steel situation by producers, more reference is being made to the high level of costs that has obtained lately in connection with the question soon to be settled as to what prices are to prevail after March 31. It is pointed out that costs are much higher than when the original price agreement was reached between the Government and the producers late last September. It is clear, however, that the producers are not using these arguments in expectation that higher prices will be granted, but rather as an offset to the expected request of the War Industries Board, at the meeting called for next Wednesday, that prices be lowered. The argument of the Government's representatives will be that the past three months have constituted an altogether exceptional period, on account of the traffic breakdown, and that no similar interruption to regular operation, entailing extraordinary production costs, is to be expected in future. The balance of probability remains strong that there will be no material alteration in the set prices. The period for which they will be extended is in doubt, and it is possible that no precise period will be named. Producers desire an extension to the end of the year, if not to the end of the war, and this would rather suggest that their private belief is costs will decrease rather than increase. No announcement is likely to be made until several days after next Wednesday's conference, as the War Industries Board will doubtless desire to consider the matter at some length, and the conclusion must then be submitted for the President's approval.

No Serious Complaint

Noting the fact that the complaints as to present prices are very far from general, and that the specific complaints relate to details of the relations between prices, the general conclusion may be reached that the price schedule as a whole is a more satisfactory one than it would be supposed could be drawn up. There is nothing about which there is not some complaint.

Traffic Conditions

Transportation conditions have continued to improve. In the past fortnight the improvement, on the whole, has been greater as to the movement of coke from the Connellsville region to blast furnaces than as to the movement of finished steel products from the mills. This means that intermediate products are accumulating to a still greater extent than formerly, and a complete restoration of shipping facilities at the steel

(Continued on page 313.)

mills would result in the release of a very large tonnage, equal not simply to the current production, but to the production plus the stocks accumulated. Mill warehouses and yards are carrying a very large tonnage of finished steel, while steel ingots have accumulated, awaiting rolling into finished form, and there is also some accumulation of pig iron.

Connellsville coke shipments last week were 334,585 tons, against 297,000 tons in each of the preceding two weeks, and an average of 267,000 tons a week in the first nine weeks of the year. Car supplies in the coke region this week have been still better than last, indicating even larger shipments this week. At this rate the blast furnaces should soon be operating at full capacity, against about 80 per cent. at present and say 60 per cent. in January.

It is still the common view in trade circles that the only restricting influence in the matter of finished steel shipments from mills is the traffic situation, but there is some doubt about this. It is true that cars are scarce, no mill having a surplus, but there is the fact that shipping permits carry car supply with them, and shipping permits are granted only when the consignee applies. It is quite possible that some consignees are purposely refraining from applying for permits because they do not desire shipments just yet.

Business on Books

At the beginning of this month the Steel Corporation had 9,288,453 tons of unfilled obligations on books. As the corporation's capacity is a trifle less than 45 per cent. of the country's total, and as the independents are at least as well filled up as the corporation, it may be assumed that the corporation's total of 9,288,453 tons represents between 40 and 45 per cent. of the total on the books of all producers, which would thus be 21,000,000 or 22,000,000 tons. A considerable part of this tonnage is represented in contracts upon which delivery will be long deferred and it is quite possible that some of the business will never be carried out. As a matter of fact the mills do not have specifications and definite shipping instructions for any large amount of business, except that due on war work. Customers in most cases would take more material than is being shipped them, but a little further loosening up in shipments, as is promised by the improving railroad conditions, would probably cause them to ask the mills to slow down on their deliveries.

In circumstances like these the finished steel market can hardly be described as a strong one. It is firm, as there are no concessions offered from the set prices. One of the strongest lines is sheets, there being few sellers for delivery in less than about ten weeks. Oil country goods are very scarce, buyers taking everything offered for early deliveries, while standard steel pipe is in better request. In plates, structural shapes, merchant bars and rails there is scarcely anything being done.

Government Requirements

The Government's war steel requirements for the second half of the year are now being made up. The striking feature is the great increase in the shell making program indicated by the fact that the shell steel tonnage for the second half of year is placed at 2,500,000 tons, whereas the purchases made to date have totaled only 1,500,000 tons, for delivery to June 15, and many of these purchases were made five or six months ago. Shipbuilding will, of course, absorb more steel in the second half, and there will be heavy consumption of steel in car and locomotive building. The various items of steel that have been involved in new construction, on the other hand, will be largely out of the way, so that the total war requirements may not be greater in the second half of the year than in the first half. Some rough estimates may be made as a foundation, say, 400,000 tons a month of shell steel, 250,000 to 350,000 tons of steel for cars and locomotives and a like amount for shipbuilding, the last named item, however, increasing from month to month. Taking the three items roughly at 1,000,000 gross tons of steel a month, and adding 500,000 tons a month for miscellaneous needs of Government, together with requirements of the Allied Governments, there would be a total of 3,000,000 gross tons. Capacity may be estimated at 3,000,000 gross tons a month, in finished rolled steel. As there is little purely commercial or peace demand for steel, it is evident that if the steel industry is permitted by traffic and other conditions to operate at 85 or 90 per cent. of capacity, and there is special reason why it should not be, there will be an ample supply of steel. It will be only a matter of time until this fact is generally realized. There are many more who consider the condition a possibility than there were three months ago.

UPWARD TREND OF WAGES OF IRON AND STEEL WORKERS

The upward trend of wages, although not so pronounced as in the case of prices, is shown in a report prepared by N. C. Adams for the Bureau of Labor Statistics of the United States Department of Labor.

The report covers the six departments of the iron and steel industry and shows wage increases since May, 1915, as follows: In blast furnaces, 52 per cent.; in Bessemer converters, 58 per cent.; in open-hearth furnaces, 36 per cent.; in blooming mills, 35 per cent.; in plate mills, 50 per cent.; in sheet mills, 95 per cent. In nearly every case the bureau found men working approximately the same number of hours per week as in 1915.

Since this report was compiled there have been additional increases of approximately 16 per cent.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 21.— Advances have been made on putty and white lead in oil. Tendencies have been of a firming nature for some little time, and these were definitely pointed out in the columns of HARDWARE AND METAL. The advance of 25c per 100 lbs. made on putty is occasioned through the recent advances for linseed oil and the strength of whiting. White lead in oil has advanced 50c per 100 lbs. in sympathy with rising costs for oil and the firm situation in lead. Turpentine is easy at last week's decline. Spring orders are going forward as fast as the same can be prepared. An early season and an active one is expected.

Linseed Oil Is Feverish With Quotations Erratic

Montreal.

LINSEED OIL.—There is a very erratic and unsettled condition to the market this week, and, while there have been lower quotations during the week than those obtaining a week ago, the prices are not dependable from day to day. At the time of writing prices are around $1.84 for raw and $1.86½ for the boiled. During the week even lower prices obtained, but for the most part tendencies ranged nearer the $1.90 mark. Crushers report that there are several lots of seed on the way, with an occasional car reaching destination. The deliveries are expected to improve, although congestion will not be relieved materially for some time yet. Although the market is quite bare of supplies now, there is a feeling in oil circles of better times ahead.

Linseed Oil—	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 4 barrels	$1.84	$1.86½

Turpentine Continues Easy On Reductions

Montreal.

TURPENTINE.—The easier tendency which was reported last week continues. Better deliveries from the South are responsible for this easier feeling, and it is probable that the new basis will give a stimulus to the demand, especially in view of the near approach of spring. There is a very unsettled condition in the New York market, although quotations there are the same as they were a week ago. At the same time some will not make quotations at all. For the immediate present there is not a great deal of movement. Prices are as follows:

Turpentine—	Per Imp. gallon
1 barrel lots	$0.63-$0.67
5 bbls. and over	0.65- 0.69
Small quantities	.... - ....

Twenty-Five Cent Advance On Standard Putty

Montreal.

PUTTY.—The high prices that have been reached for oil and also for whiting have resulted in an advance on putty. This was a definite forecast in last week's issue of HARDWARE AND METAL. The advance is represented by an additional 25c per 100 pounds being added to all quotations, and the new prices will be found below. The change also makes higher the prices on pure putty and on glaziers', the new differential on pure putty being $2 instead of $1.75 over standard quotations. Business is fair in this commodity. The new arrangements are for bookings up to June 1st delivery.

	Per 100 lbs.		
Standard Putty—	5 ton	1 ton	Less
Bulk, in barrels	$4.00	$4.15	$4.35
Do., ½ barrels	4.15	4.20	4.50
Do., 100 lbs.	4.15	4.20	4.50
Do., 100 lb.	4.85	5.00	5.20
Do., 25 lb.	4.85	5.00	5.20
Do., 12½ lb.	5.10	5.25	5.45
3 and 5 lb. tins	6.85	7.00	7.20
1 and 2 lb. tins	7.35	7.50	7.70

Pure linseed oil putty, $2.00 per 100 lb. advance on above prices.

Glaziers' putty—$1.60 per 100 lb. advance on above prices.

Fifty Cents Added To Price White Lead In Oil

Montreal.

WHITE LEAD IN OIL.—The expected has again happened, and an advance was made this week in the price of white lead in oil. The tendency has been to higher levels, and this was definitely forecast in last week's issue of HARDWARE AND METAL. The strength of the oil market, the situation on containers and the firm prices on pig lead have made the change essential. Revised prices make quotations read as follows:—Five-ton lots of pure lead, $15.50 per 100 pounds; in ton lots, $16; and small quantities, $16.35.

Mixed Paints And All Lines Are Moving Well

Montreal.

MIXED PAINTS, VARNISHES, ETC.—There is great activity in the despatch of spring orders, the paint makers report. A healthy and active season is anticipated. and the facility with which the orders that have been entrusted to the different firms are being filled indicates that retailers should be able to open their selling campaigns early this season. Present business is normal, and there is a good feeling throughout the trade. Varnish makers report that a satisfactory business is probable for the coming season, notwithstanding the smaller amount of building being undertaken.

TORONTO

TORONTO, March 21.—In some quarters a decline during the week on linseed oil of 2c per gallon was recorded over last week's figures but former quotations have again been established and are holding firm. The situation in regard to deliveries shows little improvement. White lead in oil has registered an advance of 50c per 100 pounds and standard putty is up 25c per 100 pounds. Pure putty advances 50c, making the differential now $2.00 instead of $1.75 advance over standard prices. Brushes have undergone a big revision upward, practically all lines being affected.

Linseed Oil Holds Firm At High Levels

Toronto.

LINSEED OIL.—Linseed oil has held firm at the high levels established last week and from many sources, indications are that supplies are still limited. However, a little better movement of seed has become manifest though not enough as yet to relieve the situation altogether. The price of flax on the Winnipeg exchange showed an uncertain tendency during the week and declines were recorded. However, prices have recovered and Wednesday's quotation for No. 1 cash flax of $3.96 is only ¼c lower than that prevailing on Wednesday of last week. Prices prevailing on oil are as follows:

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.87-$2.00	$1.89½-$2.03
3 to 5 bbls.	.....	.....
6 to 9 bbls.	.....	.....

Less than barrel lots 10c per gallon higher than single barrel price.

Turpentine Holds Steady In Easier Market

Toronto.

TURPENTINE.—Little interest centres around the turpentine market during the week. No supplies are coming forward and stocks locally are very light. However, the demand is by no means heavy and such orders as are placed are being filled. An improvement in demand is expected with the opening up of spring weather. The primary market is somewhat easier but locally

no change is reported, prices holding at the decline registered last week.

	Imp. Gal.
1 barrel	$0.65½-$0.70
2 to 4 barrels	0.64 - 0.69
5 gallon lots	0.70½- 0.80

White Lead In Oil Makes Advance Of 50c

Toronto.

WHITE LEAD IN OIL.—Interest centers in the announcement during the week that white lead in oil has gone up 50c per 100 pounds. This follows principally on the big advances registered in linseed oil though lead holds quite firm in the primary markets. White lead in oil, pure, is now being quoted at $16.20 per 100 pounds in ton lots, with an extra of 35c per 100 pounds in less than this quantity. Elephant genuine is now $16.70 per 100 pounds in ton lots. B. B. genuine lead is quoted at $17.95 per 100 pounds in less than tons, with a 5 per cent discount in ton lots. The complete list appears in the current market quotations. The demand is very light and stocks are reported heavy

Mixed Paints Going Forward In Good Volume

Toronto.

MIXED PAINTS.—Activity marks the demand for mixed paints and manufacturers are completing their spring orders as rapidly as possible. Business is reported excellent and retailers apparently are going after trade aggressively. Trade seems to be opening up quickly and orders are being despatched with a little more freedom, the congestion which has been apparent in railway circles being slowly relieved. The market remains firm and unchanged, though some express the opinion that if the present high price of linseed oil is held and with the advanced figures for lead, higher quotations may be necessary.

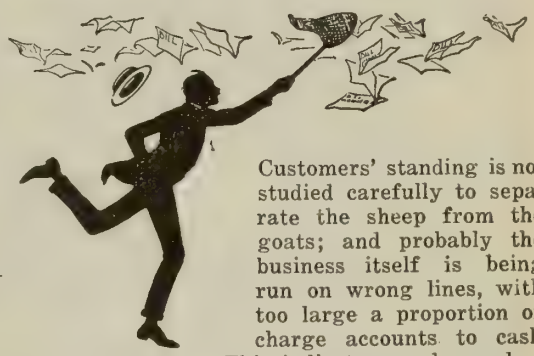
Putty Registers 25c Jump; Glass Unchanged

Toronto.

GLASS, PUTTY.—Putty has gone to further high levels during the week, an advance of 25c per 100 pounds being registered in the standard and 50c in the pure. The high prices of linseed oil and the scarcity of whiting are given as factors in this latest revision. The price on standard bulk putty in casks is now $4.55 per 100 pounds. Quotations on other packages are shown in the current market quotations. The pure putty differential has been changed to $2.00 per 100 pounds advance over standard instead of $1.75, which really means an increase in the pure of 50c per 100 pounds.

Glass has remained unchanged during the week, the discount for full boxes being 25 per cent. and 10 per cent. for cut lights.

Advances In Brushes Reported; Good Demand



Toronto.

BRUSHES.—Advances of from 5 to 25 per cent. are reported as becoming effective in some quarters during the week, bristle paint and varnish being revised according to length and source of supply from which they are taken. It is indicated that white bristles are very scarce and practically unobtainable, in fact some orders for white bristle brushes have had to be cancelled during the week. China bristles are reported up with a big demand in evidence for short and medium lengths. A recent order for one million shaving brushes has to be filled with short black bristles, a filling which was practically never before used in this country. Broom handles, including hair, staple and corn have all advanced about 10 per cent. during the week. Business in brushes is reported good and orders in good volume are being shipped out.

How Can I Collect Those Old Bills?

By James H. Collins.

Illustrations by Jessie Gillespie—Reprinted from "Every Week"

THE sudden cold snap had frozen water-pipes all over town, and the electric light company was thawing out its equipment with a storage battery truck. A saloonkeeper pleaded with the foreman to help him get water—plumbers were unobtainable and he was losing business. The foreman was touched. He made connections from the truck batteries to the saloon pipes, turned on the electric current, and in a minute or two the water was running again.

"Five dollars," said the foreman. But the saloon man hesitated. That seemed a lot of money for five minutes' work—now that he had water once more.

The foreman was a born collector.

"Just reverse that current," he said to an assistant. "and freeze him up again."

"Hey! hold on!" shouted the saloon man. "Here's your money—I was only foolin'!" And he paid eagerly, not knowing that the foreman had ordered an electrical impossibility.

To persons outside the collection department of a business it often seems as if the granting of credit and securing payment of bills might be full of difficulties and uncertainties. But, really, this department of a business can be conducted on definite principles to secure definite results.

The first thing in prompt, clean collections is to use judgment in extending credit. Customers can be gauged by classes, lines of business, residence localities, wealth, and other indications, and the trustworthy separated from the doubtful.

The next thing is to be prompt and systematic in mailing bills and asking for payment.

Third, have some way of punishing the tardy debtor.

That covers about all the elements of skilful collecting.

Add a collection man whose heart is in his work, and the money will come in.

Bad collections can always be traced, first of all, to careless granting of credit. Customers' standing is not studied carefully to separate the sheep from the goats; and probably the business itself is being run on wrong lines, with too large a proportion of charge accounts to cash customers. This indicates careless salesmanship, and too many bad debts, which make high prices and short profits—foundation of the business all wrong.

Wise credit arrangements mean a better selection of customers, and also a better system in dealing with them. They are given to understand that bills are due on a certain day, and all the terms are clear, and the collection man asks for payment promptly on that day, with maybe a reminder several days in advance. Promptness and clear understanding lead to payment in three-fourths of the cases; for even debtors instinctively respond to straightforward dealing on the part of creditors, paying the concern that is businesslike, and putting off settlement with the one that is careless and tardy.

Sometimes a very little improvement in collecting methods will make all the difference in the world in prompt payment. A large instalment house sent bills to customers every month, and got a fair proportion of collections. When the collection man adopted the device of sending a printed return envelope with each bill, making it easier for customers to mail back money, the collections improved twenty-five per cent.

Punishment of a tardy debtor does not mean a lawsuit for the money due, or browbeating through attorneys, or other unpleasant practices. It may be enough to show him that slow payment is hurting his own business standing—if he does not pay promptly he will not be entitled to discounts, or it will not be advisable to sell him such quantities on credit. The old-time way of collecting hard accounts was to turn them over to attorneys, on the assumption that debtors were dead beats, and get the money by hook or crook, along with the lasting enmity of the debtor. But the present-day method is to take the whole question up with the debtor, learn all the facts, make such business adjustment as will enable him to pay, and hold his friendship and trade.

CURRENT MARKET QUOTATIONS

These prices are for such quantities as are usually ordered by retail dealers. Large buyers can frequently make purchases at better prices.

Terms 2% 30 days, approved credit.

Prices—Ontario, Quebec and Maritime Provinces.

While the foregoing prices on iron pipe are the nominal prices, it has been found in practice that prospective buyers should ask for quotations on sizes 2½ inches and larger on account of the shortage of these sizes and the extra difficulty of procuring supplies.

Stephens
REGISTERED TRADE MARK

AGENCY
Stephens
PAINT

Appreciating Stephens' Paints

The Dealer who appreciates Stephens' Paints most is the Dealer who has the Stephens' Paint Agency sign on his store. He knows just what guaranteed paints can do to build permanent, steady business and good-will. He knows the difference between handling "paint" and Stephens' Paint. He appreciates the advantage of selling paints that satisfy his customers completely—paints that once used are thereafter asked for by name. His cash register tells him every day that it pays to be the Stephens' Paint Agent.

Stephens' Paints are compounded carefully and accurately to fulfill the guarantee that goes with every can. The Stephens' Agent is never called upon to make explanations or to offer apologies. The paints he sells are good—all through, and he knows it—constantly growing sales prove it beyond question.

Now, if there is no Stephens' Paint Agency in your locality you should know the interesting proposition we have to make. Will you write about it to-day.

PAINT and VARNISH MAKERS
WINNIPEG and CALGARY

MARTIN-SENOUR
SERVICE
ALWAYS 100% EFFICIENT

The Martin-Senour service program for 1918 is the strongest and most efficient ever attempted by any paint manufacturer in Canada. This campaign will go far towards making this a record year for all Martin-Senour dealer agents. Advertisements will be used in an even wider range of newspapers, magazines, farm and religious journals than heretofore. All this publicity is so arranged that it will appear at the right time to meet the eye of every possible paint user throughout the Dominion.

POSTER ADVERTISING SERVICE

Reproduced above is our new 24-sheet poster in colors as it will appear on all available posting space throughout Canada. This poster showing is only one of the many new features of the efficient service we have prepared to assist our dealer agents in building up a bigger and better paint and varnish business. Any time is a good time to investigate the Martin-Senour dealer agency proposition. The best time is NOW.

MARTIN-SENOUR

Paints and Varnishes

ALWAYS 100% PURE

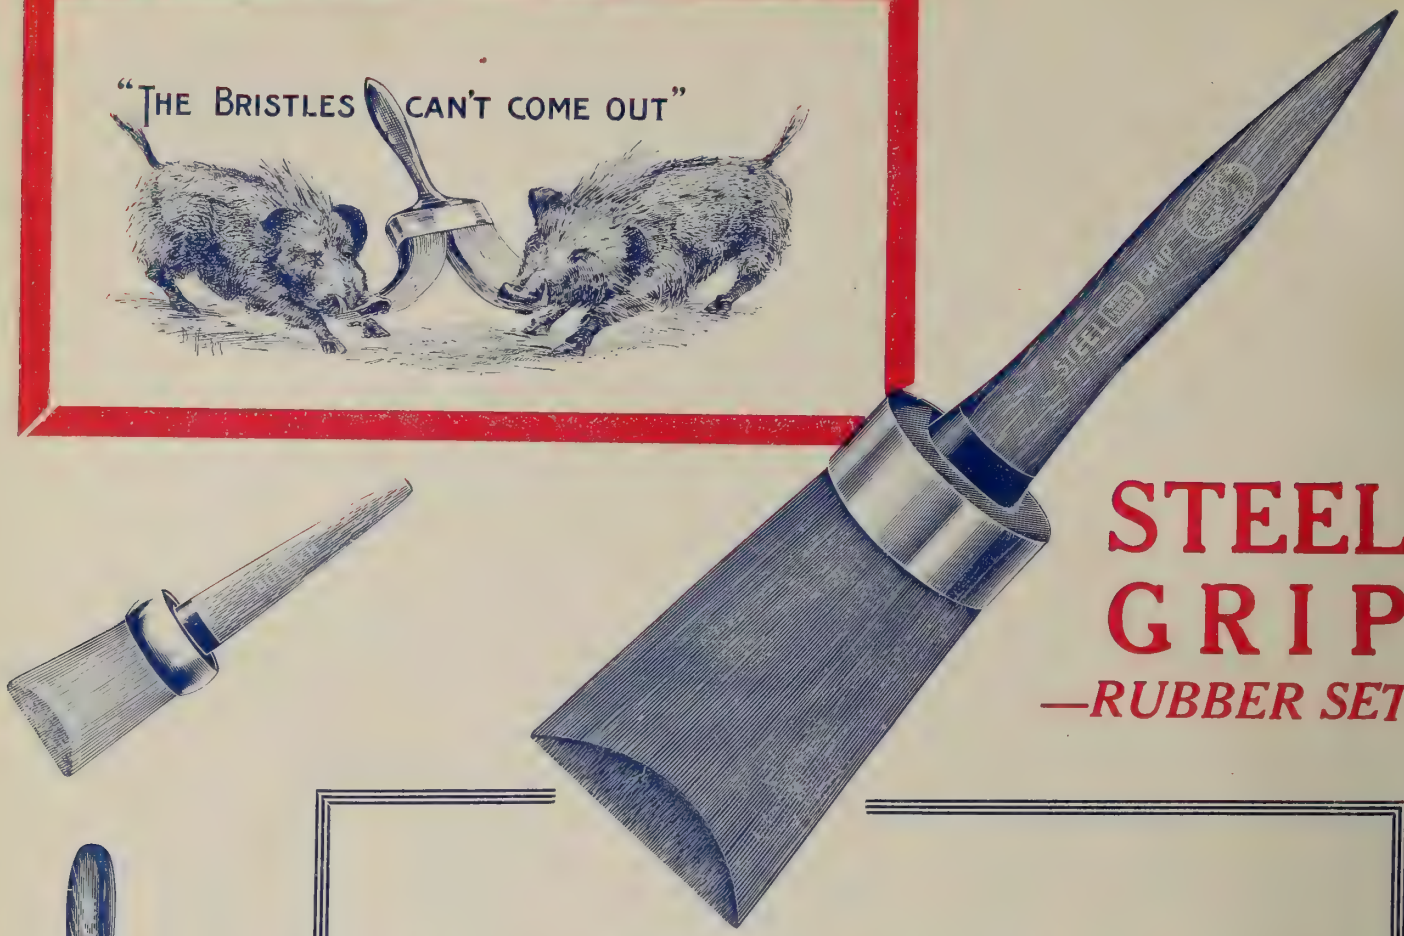
ECONOMY

will be universally practised during the coming year on account of the urgent need for conservation.

It becomes then a necessity for the merchant to assure himself that the Paint he offers for sale is of such high quality that it will afford the perfect protection to the surface on which it is applied that is absolutely essential to fulfill the conditions of both Economy and Conservation.

QUALITY

is demanded wherever economy is practised, because it gives full measure of value for every dollar invested. Quality is the first consideration in the manufacture of all Martin-Senour products, and the dealer agent who sells these goods as well as the customer who purchases them are both fully protected by the absolute guarantee of purity and quality.



All our Dealer Agents have good reason to know that Martin Senour Paints and Varnishes are the easiest and most profitable to sell.

Look Over Your House

What does it need in the way of paint?

While paint is intended to make the surface more pleasing to the eye, by the selection of a color scheme that harmonizes with your ideas of tasteful decoration, still, its most vital function is to protect that surface against decay and deterioration

Ramsay's Paints combine to the greatest degree, looks, wear and protection. They give your house the best appearance over the longest term of years at the lowest cost.

There is a Ramsay dealer not far from where you live. Ask him or write us for booklet; we will gladly offer suggestions.

"Say, Boss! Here's Another of Those Pratt & Lambert Full-Page "Post" Ads!"

IT'S only on the day the advertisement comes out that you Pratt & Lambert Dealers feel that real thrill of partnership in a big proposition. But the influence of it is going on all the time. In two million homes Thursday is "Post" day; and there, around the library table, the influence of these big Pratt & Lambert advertisements makes itself felt. Sometimes perchance, it falls on fertile ground — a varnish job is just ready to be done, and some dealer, somewhere, sells "61" Floor Varnish. Sometimes it produces more slowly, perhaps in a month or a year. But Pratt & Lambert advertising isn't an *advertisement;* it's an *influence* which has been created by the *hundreds* of different advertisements that have appeared in the last ten years. As an example, look at the

FULL-PAGE PRATT & LAMBERT ADVERTISEMENT IN THE SATURDAY EVENING POST ISSUE OF MARCH 30TH

But this is only one of many; there are full pages also in the American Magazine, Country Life in America and House Beautiful, and a series of large space advertisements in the Ladies' Home Journal. All of these advertisements are hammering one single vital fact—the durability of "61" Floor Varnish. However, ten years' experience has proved that by this forceful, perpetual, consistent devotion to a single advertising idea, the whole Pratt & Lambert proposition benefits—*and the dealers, who handle the P&L line, benefit most of all.*

You should handle the P&L line. Think it over. Ask P&L dealers what they think of it, and when you get their answer, realize and consider that they were once "almost persuaded", just as you are.

Then write for the Pratt & Lambert Dealer Proposition.

Moore's House Colors

Permanent results from sales of Paints

The dealer who makes Moore's House Colors his "pet" paint—who knows what he can guarantee them to do—who takes every opportunity to recommend them—who, in short, gradually brings his store to be known as the place where Moore's House Colors are sold—he is the Dealer who gets really permanent results in his Paint Department.

As a fact, where Moore's House Colors are used one season they are used the next season, and the next, and always. And the Dealer who doesn't just sell Moore's House Colors but "pushes" them, is the man who gets the bulk of this permanent business, for the Public places its trust in the man who trusts the goods he sells.

If you handle Moore's House Colors, do so with confidence and pride. It pays.

Windsor Solvent Stains

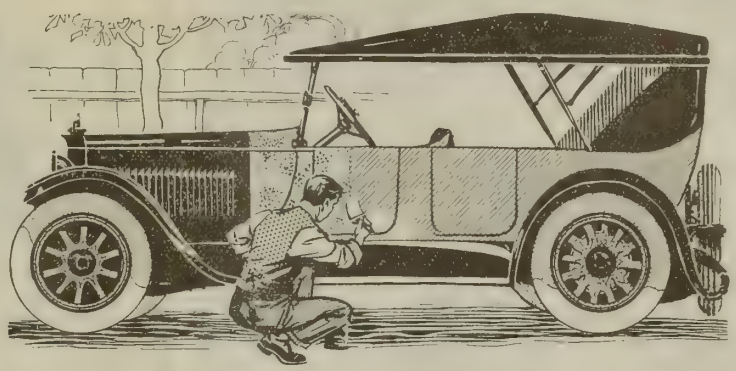
These Stains are a new line now produced in Canada for the first time.

They will penetrate and stain any Varnish without injuring the finish in any way.

Perfectly adapted for use on new or finished wood, whether painted or varnished.

Put up in Patent Top Bottles, in four sizes.

Nine very pleasing shades.



Write for samples and name of nearest jobber.

If interested, tear out this page and keep with letters to be answered.

Mr. Hardwareman

Have you ever considered the advantages of advertising your wants in HARDWARE AND METAL? One of the most important of these is the fact that there is no waste circulation. HARDWARE AND METAL goes only to the people who are directly interested in the trade. We have offices in Montreal, Toronto, and Winnipeg. If you like you can have a box number in care of either one of these offices, whichever is nearest to you. We will then notify our representative there and he will promptly forward any replies which may come in answer to your ad. Remember, Thursday noon is the latest for receiving want ads for the current issue.

Hardware & Metal
Want Ad Department

Get Your Share of this New Business

From fifteen to twenty million dollars is usually spent every year in refinishing motor cars. No one likes a shabby car, but many will be neglected this year from economical reasons unless owners adopt the *"Berry way,"* which makes the cost nominal.

Berry Brothers'
Auto Color Varnishes

enable the unskilled varnisher to refinish his car in his own garage and produce a handsome, durable finish in any color combination for the mere cost of the material.

We furnish an attractive cut-out for counter display, and folders telling how much varnish it takes for a car, how easily an amateur can use it, and showing in colors how cars look when refinished. A selling help of real value.

Ready to Ship Assortments

We have already put up, well selected assortments of colors that we can ship promptly. Order one to-day and get in the field early. You will sell it quickly and want more. Write for further particulars anyway.

If a Bundle of Straw was "SET IN RUBBER" Would it be a Paint Brush?

Foolish question, you say, yet there are some who think that because a brush is "set in rubber" it must be a *good* brush.

The finest stitching in the world will not make a good pair of shoes out of paper soles, pressed leather heels and a burlap bag top, yet *without* good stitching you could not make good shoes with oak tanned leather soles and heels and the finest calfskin top.

So it is with brushes. A good brush must be "set in rubber" to make certain its holding in the ferrule under all conditions, but the setting in rubber is but a minor requisite to the making of a good brush. It must also have in it bristles of quality that have been sized, washed, dressed and mixed to the proper solidity and elasticity by thoroughly trained men who have had years of experience in this most important branch of the business. The handle, ferrule and plug must be just suited to the particular kind of brush it is used in and finally the brush must be put together by artists in brush building, trained to produce and who take pride in the production of

"BETTER BRUSHES"

To get brushes of this description you must ask for more than "set in rubber." You must demand

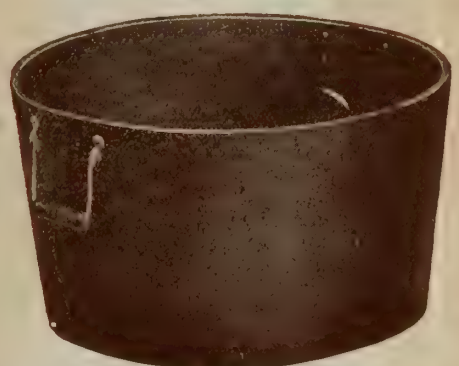
Indurated Fibreware, Better Than Zinc, Glass or Wood

Indurated Ware

in Great Favor Now

Indurated Ware has been a very popular seller since its inception, but just now it is going extra strong owing to war conditions which have placed the price of some of its competing lines (zinc, tin, galvanized iron ware) out of reach.

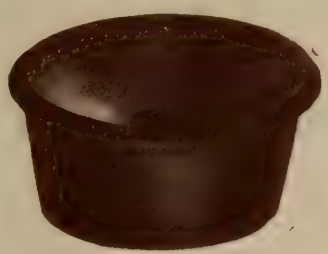


At all times **indurated ware** has big advantages —it is seamless, cannot fall apart, shrink or become watersoaked.

Butter Pail for Delivery and Storage Purposes

Boost this Washboard

It will justly stand some good boosting. Tell your customers of its ability to give better, all-round service than zinc, glass or wood washboards. When they use it they'll thank you for recommending it.



Wash or Baby's Bath Tub 4 sizes

Full Line of Indurated Ware

Our line includes butter pails, and pails of all kinds, tubs of all kinds, barrel covers, cuspidors, etc. Write direct or ask the "Eddy" representative for a catalog of the full line.

WHAT IT IS—Indurated Ware is Wood Pulp moulded under enormous hydraulic pressure and baked at extreme heat.

A patent double-dipping process gives the Finish, which makes the Ware of a Glossy, Rich Appearance, and renders it Impervious to liquids.

Cuspidor 2 sizes

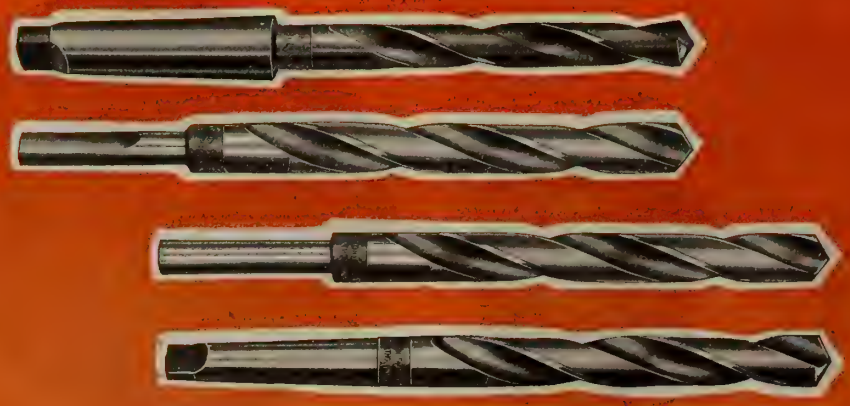
Butterfield-

TWIST DRILLS

Carbon and High Speed for Every Purpose

Once a mechanic has used Butterfield Drills he is settled on the drill question. He has no thought of turning back to formerly-used makes or of looking further for new one. He is delighted with the perfect, clean, accurate holes produced by Butterfield Drills, with the small amount of grinding necessary and the almost complete absence of breakage.



This is a big advantage gained by selling Butterfield Drills that they attract business that stays with you.

Have you the Butterfield catalog?

"It's a cinch with Reece's Screw Plates"

"Since the boss got these Reece's Screw Plates I'm giving him more work without hurting myself one bit. I can cut more threads, and bigger ones, without any help. I don't have to change the dies every time I have a different size thread to cut. I just turn in the adjusting screw on either side of the collet and she's ready for a smaller cut, or I turn them out, loosen cover, push back the dies and tighten cover for a larger pipe. And, d'ye know, she's just as rigid and true as any solid die I ever used. I never spoil a thread because the guide is cast solid with the collet and can't work loose. No, sir, I never did see anything to beat these Reece's Screw Plates."

Isn't this the verdict you wish to hear on the goods you sell? Write for our proposition and learn how easy it is to have mechanics boosting for you.

REGRINDING
with the Metal Disc

ALL PENBERTHY VALVES HAVE THE EXTERNAL THREAD CONSTRUCTION

STRONG
Where others are weak

APPROVED FOR 175 LBS. PRESSURE

APPROVED FOR 200 LBS. PRESSURE

CONFORMING TO THE SPIRIT OF THE PRESENT DAY!

We are pioneers in the manufacture of high-grade Brass Goods in Canada, and the **first** Valve Makers to adopt the outside bonnet construction in Globe, Angle and Gate Valves in this country.

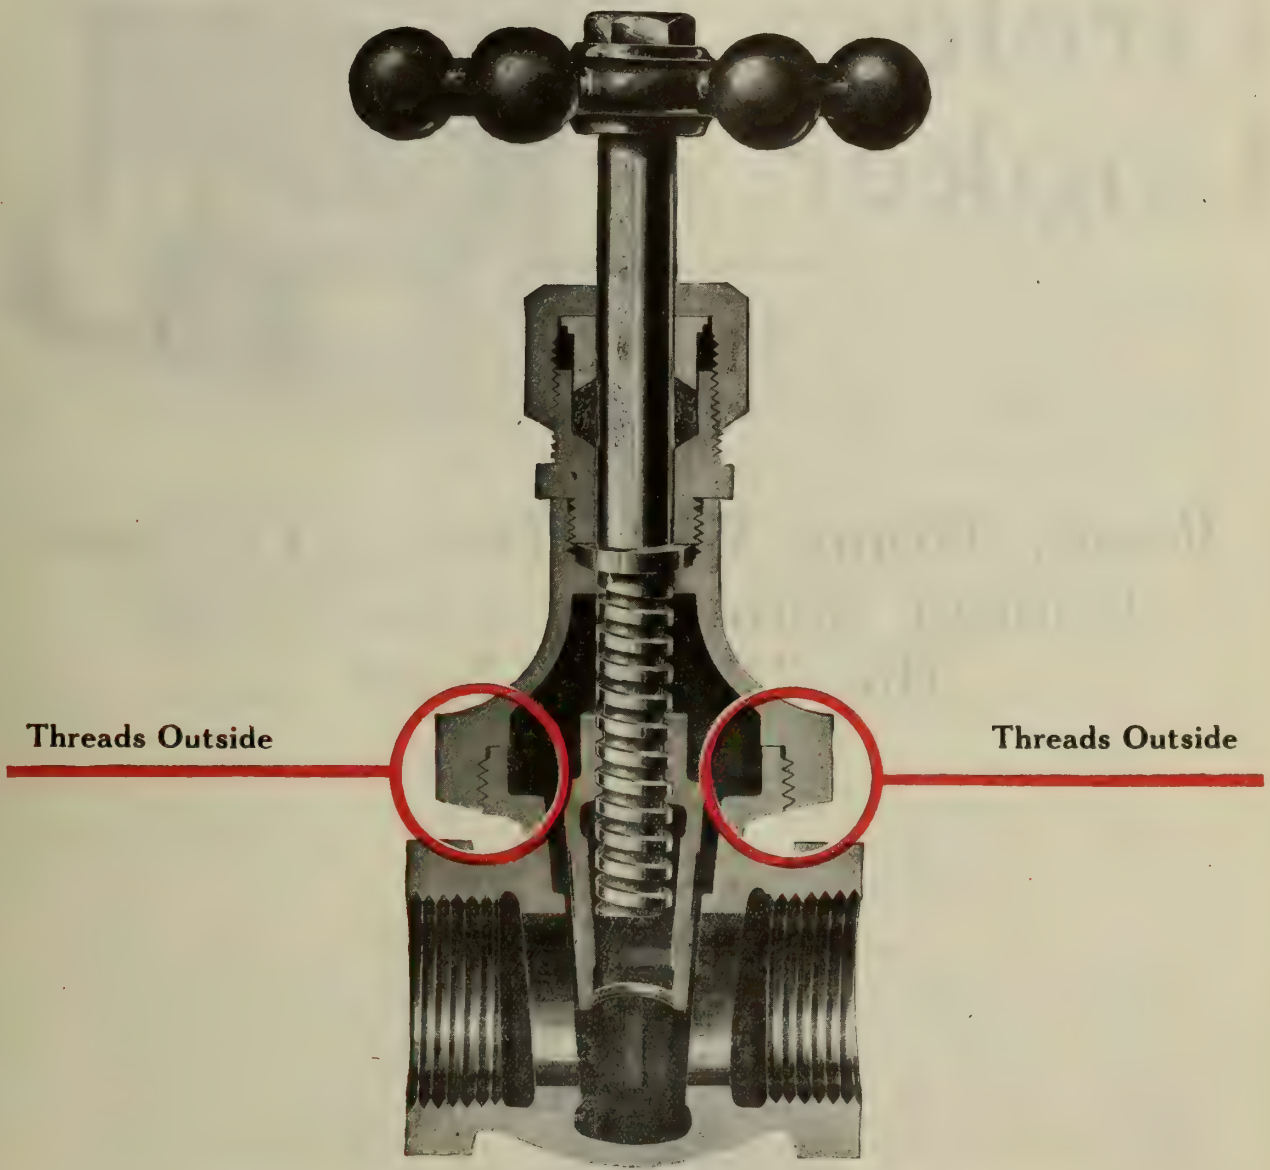
STUDY THE PICTURE

Note what this improved construction means—No corrosion of threads, which prevents all strains in taking valve apart. No spreading of bonnet end of body, causing a loose-fitting and unsafe bonnet. Makes a steam-tight connection—no leaks. Permits of a more compact valve—consequently a stronger one.

There can be no stronger guarantee of service than our trade-mark, which is cast on the body of every valve.

LEADING JOBBERS

from coast to coast sell Penberthy Valves. Specify them and refuse substitutes. Our prices are reasonable and the Valves guaranteed.



Write for Free Catalog.

If interested, tear out this page and keep with letters to be answered.

PENBERTHY

BRASS GATE VALVES

The Gate That's Up-To-Date!

IMPROVED CONSTRUCTION IMPROVED DESIGN IMPROVED EFFICIENCY

In the illustration above we have marked with the circles the one big improvement in our Gate Valves over other makes, viz.: "THE EXTERNAL THREAD CONSTRUCTION." The bonnet **does not screw into** the body of the valve. It fastens to it by **Outside** threads on the body, which threads never come in contact with the corrosive action of the steam and water. They are **away** from it. The result is, the valve bonnet and body can always be taken apart without strain or injury. This construction also prevents stripping of threads or spreading of bonnet end of body when screwing down the bonnet tight. It's SAFE, SURE and STRONG.

The solid-wedge Gate is preferred by leading Engineers because it is free from the troubles and defects that are usually found in the Double-disc type.

Registered in Ontario for 150 lbs. steam pressure. **Stocked by leading Jobbers throughout Canada.**

Penberthy Injector Co., Limited. High Grade Valve Mfrs. **Windsor, Ont.**

The Royal Fireless Cooker

Saves time, saves labor, saves fuel the year round and cooks food thoroughly without loss of weight or flavor, or danger of burning. These are reasons why

Every Home Will Have a Fireless Cooker Sooner or Later—Sell the "Royal" Now

The Fireless Cooker has passed the experimental stage. It has been proven a practical and economical success, and the day will soon arrive when no kitchen will be complete without one. In the "ROYAL" you see the best fireless cookers on the market.

If the housewife is out she need not worry about having the dinner or supper burned with a **Royal Fireless Cooker** in her home. Foods can cook overtime without injury and it does the cooking perfectly without any attention. The **Royal Fireless Cooker** cooks cereals while the family sleeps and presents them ready for the table in the morning in a most nutritious state.

One user of the **Royal Fireless Cooker** says it roasts nicely and bakes cakes and bread to perfection. Another user says it has halved her gas bills; and another says the kitchen does not get heated up and there are no objectionable cooking odors in her kitchen now.

The **Royal Fireless Cooker** with all these attributes is bound to get into the homes. There's a big demand coming. Be prepared to meet it. ORDER NOW.

The Royal Fireless Cooker is practically indestructible. Built by our patent process of very best materials and cased in solid oak or steel. We would like to explain it further and tell you of its great possibilities. Let us hear from you without delay. Our dealer's proposition is worth while.

Greater Production Means Greater Provision for Storage —Means Barns and Stables to be Built—

AND where there's a barn there are doors and door hangers. Now is your time to prepare for this business—don't wait until the farmer enquires about his barn and stable equipment before you act. A line to-day to us will open the way to some real live business in "Reliable" door hangers.

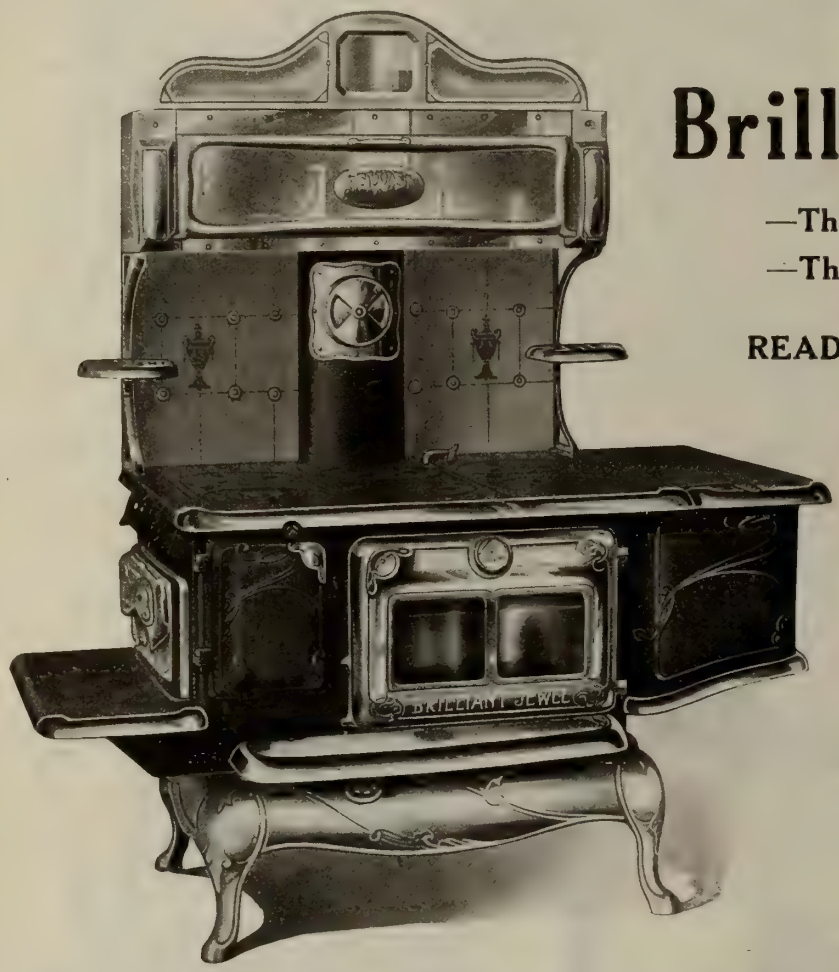
Reliable Door Hangers

The accompanying illustration shows the different parts of the famous "Reliable" door hanger, including the round track and adjustable support.

"Reliable" Hangers have stood the test of the varying Canadian weather conditions—terrific storms, rain, sleet and snow; and yet for fifteen years it has been a constant repeater and not one dissatisfied customer.

The "Reliable" is always reliable,—unbreakable, cannot come off the track, always runs, no matter what the weather conditions may be.

The "Reliable" adjustable Support enables the track to be put up securely, leaving no weak spots from the inability to fasten to crack or knot—the supports are adjustable and slide any way. "We guarantee Every Reliable Hanger."



We make a full line of door hangers, including square and round trolley track, and fire door fittings that are labelled under the direction of the National Board of Fire Underwriters. We also manufacture locks and builders' hardware. We invite your enquiry.

MADE-IN-HAMILTON HARDWARE

Hamilton's Art Glass Workshop

MANY hardware merchants have developed a very satisfactory volume of business in mirrors and art glass windows and fixtures.

THIS department can be made one of the most profitable in almost any hardware store. Large stocks are not necessary and the profit margin is big.

OUR facilities for executing promptly intricate or simple orders for stained or memorial windows, plain or bevelled mirrors, leaded glass and bent glass are unequalled.

MANY hardware merchants take orders from builders, churches and private individuals; have us ship direct to their customers and make their profit without even handling the goods. We also submit special designs and interview their clients on their behalf.

A SMALL stock of assorted sizes in plate glass windshields will bring you a lot of nice business.

IT will pay you to investigate the possibilities of this department and to get our prices and service proposition.

Leeks & Potts, Limited, Hamilton, Ont.

LITTLE WORDS WITH BIG MEANING

Quality

According to "Webster," Quality is "an excellence of character; natural superiority."

Service

Webster's definition of "Service" is; "The performance of labor for the benefit of another."

We use these words advisedly—fully understanding their definitions—and realizing the obligation we place upon ourselves by their continued use in connection with our products of Iron and Steel, and our attitude to the people we serve.

NUMBER TWO

JOHN P. HOLLAND

ON August 12, 1914, two weeks after the outbreak of the European War, John P. Holland, inventor of the submarine, died at his home in Newark, N. J. Holland was born in Ireland in 1842—and at the age of 20 he commenced to concentrate on the submarine idea. He came to America in 1864; and in 1898 completed his first successful submarine at Elizabeth, N. J.

Holland's entire life was dramatic and in a sense, tragic. As a result of his great genius, he will become immortal as the inventor of the most terrible war-machine the world has ever known.

The dominant trait in this wonderful man's character was

CONCENTRATION

As Holland's invention has gained the approval of practically every nation, so has the Victor Hack Saw Blade won the admiration and confidence of mechanics and technicians all over America—and all over the world.

Like Holland, we have concentrated on one thing. For over twelve years we have been experimenting, testing, improving. In practical tests, the Victor Hack Saw has seldom been equalled—and never excelled. It is the result of a large organization of technicians and skilled mechanics concentrating on one idea—which is—to make the most honest and efficient hack saw blade in the world. We do not scatter our energies. We make hack saws for every metal-cutting purpose.

To Clinch the Sale

The shortage of domestic and farm help makes a greater demand for washers, wringers and other household labor savers.

But the best salesman gets the business the same as he always did.

A clinching argument in the sale of a washer or wringer is that it was made by Dowswell, Lees & Company, Limited. The name "Dowswell" has stood for good material, honest workmanship and exclusive features for 30 years and it has a real sales value.

Are you prepared for the Spring demand?

PEERLESS PERFECTION

As Canadian citizenship makes Canada, as a nation, strong, substantial and enduring, just so the materials used in Peerless Perfection Fence permits us to make a fence that has stood the severest tests of time and endurance.

We manufacture farm fence, poultry fence, ornamental fence, gates, in fact there is scarcely a fence requirement that we cannot fill direct from our stock now. We carry the largest stock of fencing and gates of any one company in the Dominion.

READ THIS LETTER

Kingston, Ont., 1914.

The Banwell-Hoxie Wire Fence Co., Ltd.
Hamilton, Ont.

Gentlemen: I thought you would be interested in the use we are putting your wire to The Engineers of Queens University have practical work in the field. This year, under supervision from the Engineer of the Military Department, they undertook to build a bridge.

The stretch is 110 ft., and the bridge is 20 ft. wide. They used 240 rods. They laid the mesh 5 widths side by side, and 5 layers, making in all 25 lengths of 8 wires each or 200 wires in all, binding them up together at every two or three feet, and then putting the uprights on as you see, and then stretching the wire along the top in the ordinary way as protection.

They are now at camp time when the Rurals come into camp, march the artillery across it and put some gun cotton under it and blow it up. They estimate it capable of carrying a load of 60,000 pounds, or a body of soldiers at close marching order.

You can use these photos in any way you see fit, or if you want I could send you the negatives. I remain,

Yours truly,
(Signed) W. A. MITCHELL.

This Is a Military Bridge

The fence that is good enough to serve the Nation's purpose in her loyal efforts to assist the Mother Country, is good enough for every Canadian, is it not?

Premier Ranges

The dealer who can show a good display of Premier Ranges gets the cream of the business in his locality. Everyone wants a "Premier" and there is a "Premier" to suit everyone's purse—Premier Marathon, Premier Cordova, Premier Leader, Premier Royal, Premier Chieftan.

With every "Premier" goes a Guarantee Bond which is a mighty big sales help to "Premier" Agents, who have the best range backed by a real guarantee.

Get the Business

The Premier Marathon

is the "best of the best"—a carefully constructed, beautifully finished steel range that will engender a longing to possess in the heart of every woman who sees it on your floor. Fitted with our Persian Closets, comprising tiled back and pipe, the Marathon is the very last word in ranges.

The Premier Leader

is an unusual value in steel range. Painstakingly constructed and nicely finished its appearance of sturdy, honesty instantly appeals to those who must study economy. It is a genuine fuel saver and will give exceptional service.

Get the "Premier" proposition.

The Thos. Davidson Mfg. Co., Limited

Toronto MONTREAL Winnipeg

If interested, tear out this page and keep with letters to be answered.

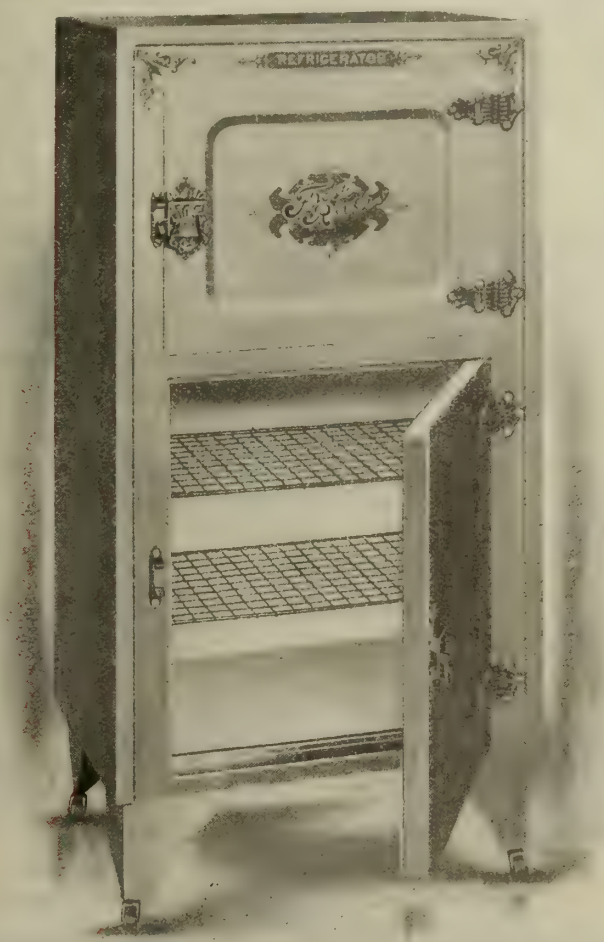
For Summer Selling

Davidson's Refrigerators, Freezers, Filters, Ice Chests and Water Coolers move briskly in the "Good Old Summer Time." They have special features which quickly recommend them, and while providing the desired coolness are very economical of ice. Stock up with these lines. They are well made in every particular and finished in a manner that makes selling easier. They'll sell quickly when the hot weather comes—they'll meet with the approval of your trade.

DIMENSIONS—11 x 18

Davidson's Cleveland Filter

Capacity 12 Quarts



Enameled Royal Blue outside with a snowy white interior. Water is filtered through a natural stone. Impossible for germs to get into drinking water. Easily kept clean and sanitary. Top vessel furnished with bail handle, base has side handles and nickel-plated faucet.

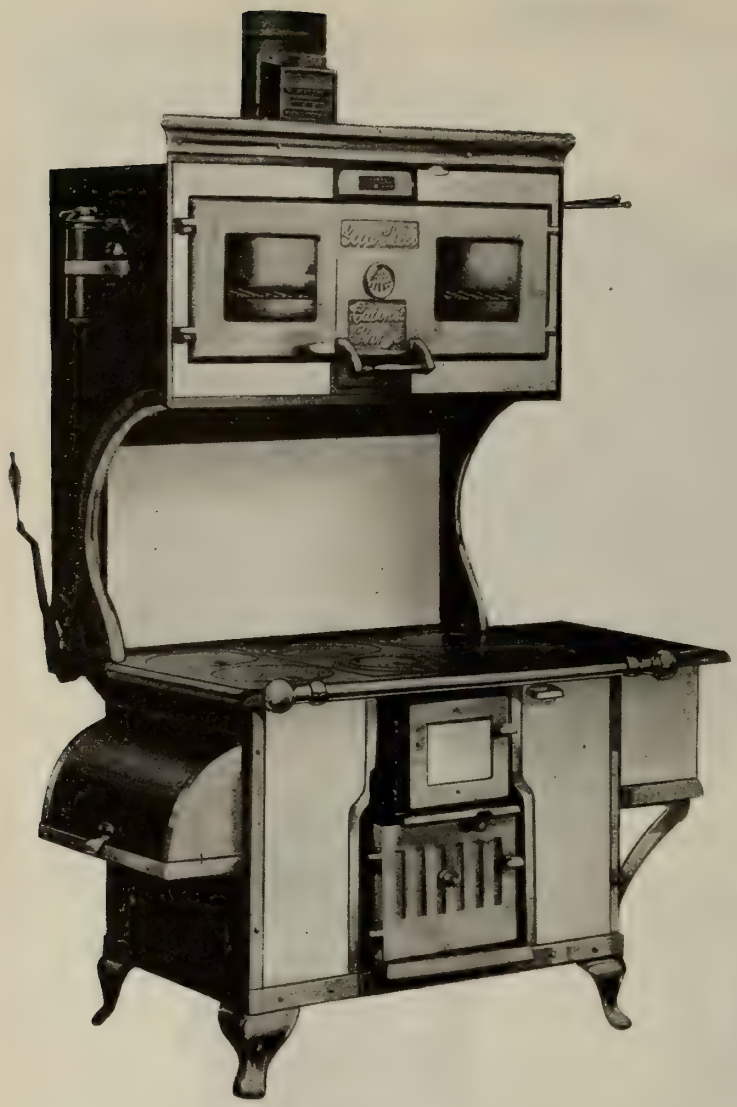
Shephard's "Lightning" Ice Cream Freezer

Everybody is familiar with the good qualities of the "Lightning" Freezer. Easy-running, quick-freezing, economical, convenient. The most effective freezer and the easiest to sell.

Made in 9 sizes—1, 2, 3, 4, 6, 8, 10, 12 and 14 Quarts with Crank, and in 2 sizes only with Fly Wheel, 14 and 20 Quarts.

Davidson's Frost River Refrigerator

Made of galvanized sheet steel finished outside with beautiful French grey enamel, and inside in snow white enamel. Fitted with tinned wire shelves which will not rust. And with inside parts removable for cleaning. Locks, hinges and handles are of polished solid brass. Made in three sizes.



The "Frost River" uses much less ice than a wooden refrigerator—a good feature in these days of high prices.

Write for prices on these good Summer lines.

Greater Efficiency in the Kitchen

In these stirring days when the whole Empire is speeded up to greater production, and efficiency has become a virtue, it is but meet that woman's greatest ally — the kitchen range—should be made more economical of fuel and labor and more efficient as a cooking unit.

The "Good Cheer" Elevated Oven Cabinet Range

White Enamel Finish (New)

(Burns Wood or Coal)

adds the last word in kitchen efficiency.

It is the royal mate of the indispensable kitchen cabinet.

Every cooking part is in the right place—the place easiest to get at and the most efficient from a cooking standpoint. The oven is not tucked away beneath the top—that's the place for firepot and ash pit—it's up on a level with the eyes, and furthermore is equipped with a light operated from a dry cell battery. Looking through the glass doors the housewife is able to note the state of the baking without lowering the temperature of the oven.

Then the long six-hole top (every hole a cooking hole) is open from end to end, affording a cooking surface any part of which is "getatable," when every other part is occupied.

The "Good Cheer" Cabinet is the ultimate in ranges—the desideratum of all good housewives.

The JAMES STEWART MFG. CO., Limited

WOODSTOCK, ONTARIO

Western Warehouse: 156 Lombard St., Winnipeg **McLennan, McFeely & Co., Ltd., Vancouver, B.C.**

If interested, tear out this page and keep with letters to be answered.

We want a "Good Cheer" agent in every town.

We want this agent to be, in every case, the live hardware dealer in his town.

He needn't have the biggest stock, but he should have the best.

For only dealers who have been accustomed to handling "best" lines will fully appreciate the possibilities of the "Good Cheer" agency.

Only such dealers can realize the sales effect of the advanced ideas and conveniences embodied in "Good Cheer" Ranges.

And such dealers will sell many and many "Good Cheer" Ranges to the class of people whom we take pride in pleasing—they who are always hard to please.

They'll sell them, too, to people who decide more quickly. "Good Cheer" features are prominent, they are effective, their purposes are easily recognized—the prospect is favorably impressed on sight.

The dealer who becomes a "Good Cheer" agent never turns back. He's satisfied to go on reaping the benefits of selling "Good Cheer." He's satisfied that "Good Cheer" is synonymous with "range perfection." He's more than satisfied with present sales and with his bright prospects. He likes being the "Good Cheer" agent.

If there is no "Good Cheer" agent in your locality ask us why. Perhaps you're just the dealer we're looking for, and if you are you'll not be sorry you connected up.

Write to-day. Now.

This is the Range with the Real Features

The Enterprise Perfect High Oven Range

It should be first on your floor

Many novel features, as well as its simplicity and ease of operation, mark a new era in range construction and put new life in range demand.

Burns any kind of fuel, and will do more work with less fuel than any other range made, because it has double the oven capacity of the ordinary range. Each oven is 20 inches square and works perfectly. Both ovens have perfectly smooth walls and floors, and the joints being airtight, there is not the last trouble in keeping them beautifully clean.

Each oven door is fitted with thermometer, and made to drop level with the oven bottom; in addition to which the lower of "DAYLIGHT OVEN" is fitted with specially tempered glass, and is just the right height for easy operation. The BACK surrounding the cooking surface is of white Porcelain Enamel, 19 inches high. This not only presents a beautiful appearance, but can be kept perfectly clean, and is the most sanitary finish that can be procured. The SHELF above this back leaves plenty of space below for pots, etc.

The RESERVOIR IS DETACHABLE. It simply hooks on, and can be attached or detached in an instant. It is made of Heavy Sheet Copper and holds 9 Imperial gallons.

The FLUES are large and of the simplest construction, ensuring easy operation, and will not clog with the dirtiest fuel. The CLEAN-OUT DOORS are so placed that the flues can be easily cleaned from the front.

Secure the Agency for this Wonderful Range for your locality and write to-day for a copy of our New 104-page illustrated Catalog, just out, showing one of the finest and most complete lines of ranges and furnaces made in Canada.

A COMBINATION COOKING AND HEATING STOVE

Weight 200 Lbs.

The Tortoise is one of the solutions of the fuel problem. It is both a Heater and a Cooking Stove.

The Top carries four 8-inch pot-holes, and has a good-sized oven. It will heat, cook and bake at the same time with any kind of fuel.

It is made with Revolving Duplex Grates, or without Grates, as desired.

A *Detachable Reservoir* with Cast Top is made to fit this Stove.

A *Water Coil,* to connect to a water system for heating water for bath, etc., can be furnished when desired, and is the only Stove of its kind that has these equipments.

The price is moderate, and in homes where this Combination Stove can be adopted, it will cut the fuel bill in half.

This Dealer Says

"Sell by The Chart—It Pays"

By

Curtiss & Prowe, Gargoyle Mobiloils Dealers

"We sell Gargoyle Mobiloils for one reason—PROFIT.

"In our six years' experience we find that the way to make the most money out of Mobiloils is to stick to the Chart of Recommendations.

"Our reasons are:

1. **When you follow the Chart the owner gets the right oil for his engine. That means SATISFACTION.**
2. **When a customer is satisfied, he has CONFIDENCE in you.**
3. **When he has confidence in you he is WILLING to TAKE YOUR ADVICE on other accessories and supplies.**
4. **And this means MORE SALES and MORE PROFITS. That's the whole story.**

GARGOYLE

Mobiloils

A grade for each type of motor

"Some dealers believe in using an oil that they think is right, regardless of what the Chart recommends.

"But they are wrong.

"If a man has an old car and is getting poor compression, it isn't the oil's fault.

"Something is wrong with the car—not with the oil. Probably worn piston rings, scored cylinders, or maybe incorrect adjustment. But these are mechanical faults and need mechanical attention.

"You can't replace worn metal, or correct poor adjustments with oil.

"Gargoyle Mobiloils are high-grade oils. They give high-grade results, even when the wrong grade is used. But if you use the wrong grade, the customer loses some of the oil's greatest benefits, and he pays for it in lost power and heavier fuel bills.

"That means dissatisfaction and loss of business the dealer might have had.

"The satisfaction that our customers get from the grades called for by the Chart for their cars, proves to us that the Chart is right. Why shouldn't we follow it?

"We are in business to make money, not to experiment with oils."

Write us at Room 704, Imperial Oil Bldg., Toronto, for booklet, "Correct Lubrication," containing Charts of Recommendations for all makes of automobiles, tractors, motorcycles and motorboat engines, and for full information regarding our proposition to dealers.

BRANCHES IN ALL CITIES

For your own sake —will you do this?

We can give you service on orders for Electrical Supplies and Auto Accessories that will prove a revelation to you for speed, accuracy and thoroughness.

There, we've made a very strong statement, but we're ready, aye, anxious, to prove it to you.

We want you to test our service.

—And we've so perfected that service, and we're so sure of our ability to handle any order, that we ask you to make your test a real one.

Will you do this? Simply ask us now to send you catalogues of our complete lines. Look through these catalogues and see what a complete and varied stock we carry. Then, some day when you're in a hurry, when you need something and need it quickly, and you don't know who to rely upon, send us your first order. Maybe it will be just a small order, one which you feel we might be tempted to slight. But as long as it's important to you, and you're going to be sore if it doesn't arrive right and on time, shoot it at us.

Then will come the revelation. You'll get that shipment by return mail, express or freight as your order specified. It will reach you in perfect condition, packed carefully, handled all through as thoroughly and exactly as if we had taken weeks to fill the order.

Will you do this—for your own sake?

Send for the catalogues to-day.

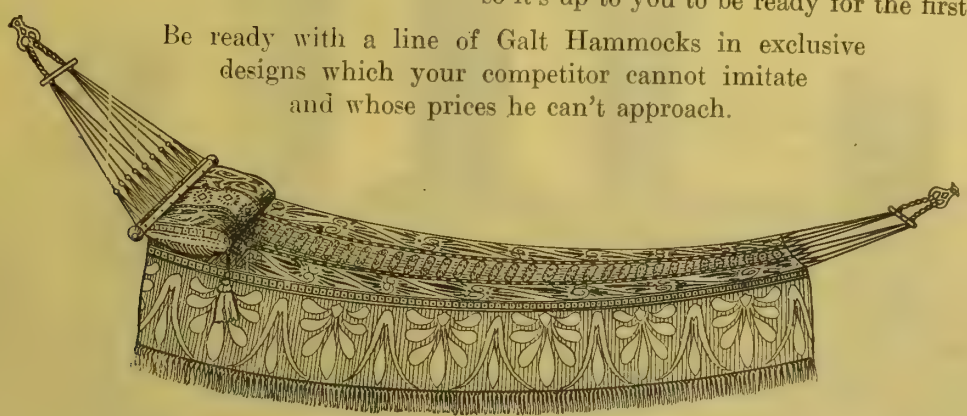
Galt Automobile Robes

THE GALT ROBE CO.
GALT, ONTARIO

100,000 New Cars mean how many New Robes ?

It is estimated that there will be upwards of 100,000 more Motor Cars in operation in Canada during 1918 than were in use in 1917. This means 100,000 more possible Purchasers for Automobile Robes. It means that Dealers who can offer Natty Patterns and good materials at popular prices will reap a rich harvest of extra business.



Galt Robes offer you just the designs that will appeal to your patrons at prices to suit any purse. They are in cotton, wool, union cloth, plush, Astrachan, imitation buffalo and goat; plain, stripes, checks, plaids and floral designs; sizes 48x72 and 54x72; weight from 2½ to 8 lbs. They can be interlined with rubber at extra cost if so ordered.

Ask for our newest folder on Robes. It illustrates the various cloths in their natural colors.

Here comes Hammock Season

Hammock days are just around the corner, so it's up to you to be ready for the first call.

Be ready with a line of Galt Hammocks in exclusive designs which your competitor cannot imitate and whose prices he can't approach.

Remember this—we deal direct with you—no extra profit to pay—we share that with you and your customer.

Hardware Men!

You Should Know the New Improved "Hercules"

New Improved "Hercules" is the indisputable evidence that "Dunlop" have long since mastered the art of correct Hose building. By virtue of its intrinsic worth this Improved Hose has already won its way as a general favorite into the confidence of a vast army of users. That fact in itself is significant to you as a Hardwareman, and as a Dealer in Garden and General Purpose Water Hose.

The Maximum of Durability

Naturally, New Improved "Hercules" is a super-strength Hose; yet it is light and flexible, and combines with its many other desirable qualities, the maximum of durability. Hence, it will withstand a heavy pressure—a test greatly in excess of any it is possible for it to receive in every-day, hard service. We build that extra staunchness into this moulded, corrugated Hose, so as to provide a sufficient margin of safety for the protection of the seller and the user, and for our own satisfaction, too.

"Hercules" is Absolutely Seamless

By our distinctive improved method of making, Dunlop New Improved "Hercules" is absolutely seamless and inseparably united. Let us emphasize that first point once again—absolutely seamless. The high-grade rubber tube, the two plies of specially-woven, braided fabric, the layer of adhesive rubber between the plies, and the exceedingly tough and durable outer cover are all individual units worked together into a composite whole. There is no possibility of separation of the plies or of the inner tube from the fabric body. Take a look down the waterway of a sample and see for yourself exactly how smooth and uniform it is and how well it is linked up with its covering.

A Really Non-Kinkable Hose

And best of all, besides being seamless, this Hose, by reason of its great resiliency and special construction, is practically non-kinkable. You can bend and twist it into all shapes and forms without any ill effects resulting therefrom. New Improved "Hercules" is supplied on reels in 500 foot lengths, a feature with manifold advantages in stocking and selling. It means that practically any length of Hose desired can be cut from the reel without any waste or loss. There are still other features you will come to know if you make your decision to sell Dunlop New Improved "Hercules" Hose.

Send for "Hercules" Sample

It will undoubtedly pay you to "sample" this Hose; or any other Dunlop brands of Hose, particulars of which we will be glad to supply. You will be "playing safe" no matter which Dunlop Product you choose, and besides, will be assuming the right to an envied reputation and an adequate margin of profit—the result of handling reliable lines.

DUNLOP TIRES

TEN VITAL FACTS

In times like these it is nice to be sure of some things:

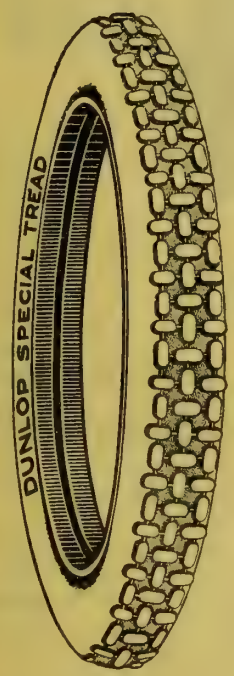
1. For 1918 you can be sure that Dunlop Tires—"Traction," "Special," "Plain"—will "come across" with the greatest mileage ever.

2. That Dunlop Tubes will continue to occupy their conspicuous position for always being the same—always good.

3. That Dunlop Accessories will include everything new that is good and everything good that is old or new.

4. That Dunlop Service will be on a par with Dunlop Reliability—none better.

5. That Dunlop Dealer co-operation will include every method which sound judgment proves will help sell sound tires.



6. That Dunlop Advertising Programme will reach farther and drive home quicker what you continuously seek —REPEAT BUSINESS.

7. That Dunlop "Traction Tread" will hold its position of being "over the top" of other anti-skids.

8. That "Special" will continue to look for comparison with any other make of tire in a similar class.

9. That "Plain" will go on filling its role of a tire at the price which suits all people on many occasions, and many people on all occasions.

10. That Dunlop will stand back of you, and Dunlop Products to the "last man and the last dollar."

SHARP SPARKS

Exact size ½" Reg. The entire shell is copper covered.

Exact size Goliath Spark Plug. Size ⅞"x18 Reg.

"Carbon-free
after months of service"

A selling point that sells—that challenges the attention of every motorist—brings the first order and the order for every additional plug replacement in his car.

Kopper King

Spark Plugs are both anti-fouling and rust-proof. They are big, husky plugs with the points that appeal to every motorist—

porcelains of rock-like strength;
firing points non-softening in the hottest engine;
shells of heavy steel protected from carbon and corrosion by a thick surface of copper.

"Built for Endurance"
The Goliath

a massive, strongly built plug, fully a match for hard usage and strenuous service in pleasure car or truck.

The shell is extra large—of heavy, blued steel. The porcelain is designed for super-strength at points of greatest strain and is hardened into rock-like strength at a temperature of 2,600°, insuring greatest possible freedom from insulation troubles.

Goliath extra-strength construction gives your customers trouble-free sparking.

THE FIN THAT PUT THE FINISH TO GLARE

Glareless Light

A GREAT deal has been *claimed* for the effectiveness of various headlight lenses in eliminating glare, yet everyone knows that glaring headlights remain a positive menace of the road.

Hence it is reassuring to know that one lens embodies something more than theory—something *tangible* that *must* produce glareless lights.

This lens is the HOLOPHANE — a unique product, made by the acknowledged leaders of the world in scientific lighting—a lens that embodies a fin or shelf of specially treated glass, which extends backward just above the bulb of the lamp, placing a positive shield between the light and the eye of the approaching motorist.

Brighter Light

IN addition to eliminating glare, the perfect headlight lens should also provide bright illumination far ahead and to the sides.

The same scientific construction that makes the HOLOPHANE LENS supreme in eliminating glare also causes it to give *brighter illumination* than any other.

Elegance of Appearance

HOLOPHANE LENSES are made out of the same bright, crystal glass for which HOLOPHANE Lighting Reflectors have been famous for the past twenty years. You get not only a scientifically designed lens, but also an accessory that adds refinement and dignity to your car. You get the life and sparkle of cut glass with the accuracy of the telescope. Note the smoothness and lustre of the surface.

Bicycles for 1918

MODESTY is a virtue but it can be overdone. Up until the present moment we have refrained from telling you what a money-making line we have. The success that many dealers in Canada are making with our goods has caused our enthusiasm to burst all bounds, and we are forced to say that all signs point to a record season with us.

BREGENT

THE HOUSE WITH THE "PEP"

OUR prices border on the sensational, all indications point to a great season for *our dealers*. You better get in on this before your next-door neighbor beats you to it.

YOU know what goods with the "Hall Mark" or "Sterling" on them means, well—we are in that class. You are going to hear a lot more about it, but the other fellow in your town is going to do the telling.

—THINK THIS OVER—

Then communicate with

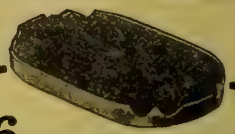
Makes a Perfect Permanent Repair



6 Round Patch & Heat Units for Punctures

Complete Outfit

$2.00 in Canada

Includes

12 Patch & Heat Units

6 Oblong Patch & Heat Units for Cuts and Tears

The Patch & Heat Unit consists of a chemically treated combustible disc on one side and a pure para rubber patch on the other. This fits over the puncture and a match is applied to the chemical disc. Without blaze or flame this disc furnishes the proper heat, which seals the cut in the tube with the new rubber, making a permanent repair.

The Patch & Heat Unit is all ready to clamp on the tube. The fuel in its metal container and the rubber patch itself are all assembled. No different parts to lose or complicated application to the tube. Simply put the unit over the puncture, clamp it down and apply the match.

SHALER

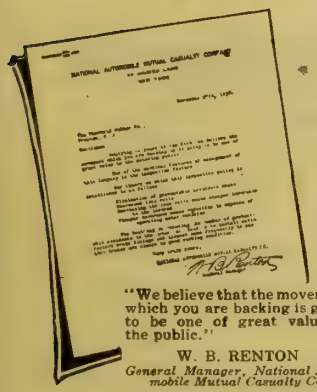
5 Minute Vulcanizer

The fact that over 500,000 motorists are now using the SHALER 5-Minute Vulcanizer is convincing proof of its ever-increasing popularity. Every motorist is a prospect for one of these handy tube vulcanizers—it should be in every car owner's tool kit—for use anywhere—on the road or in the garage.

Sell the SHALER 5-Minute Vulcanizer. Every sale of a 5-Minute Vulcanizer gives you a good profit. Besides, the big resale of patch-and-heat units furnishes you a continuous profit—it brings motorists to your place for SHALER supplies—and for all sorts of other accessories.

The SHALER 5-Minute Vulcanizer with 6 Round and 6 Oblong Patch & Heat Units packed in attractive display carton.

ORDER FROM YOUR JOBBER *NOW!*



Don't delay! The enormous demand for this popular vulcanizer makes it necessary to place your order early if you want to be sure of prompt shipment. Any jobber in the United States can supply you. Our large catalog describes the complete line of SHALER Vulcanizers for motorists' use—also complete equipment for garages and tire repair shops. Mailed free on request.

Get behind this big National Movement

"We believe that the movement which you are backing is going to be one of great value to the public."

W. B. RENTON
General Manager, National Automobile Mutual Casualty Co.

"If some plan is devised for careful periodical inspection of automobile brakes, there would be considerably fewer automobile accidents."

FRANCIS M. HUGO
Secretary of State New York

An open letter to the trade:

The new Brake Inspection Movement is of such importance to motorists in general, and to the trade in particular, that we wish to add to it our endorsement and to ask your assistance in furthering it.

Object of the movement

The object of the movement is to decrease the number of preventable accidents due to imperfectly adjusted or defective brakes.

An official of the Motor Truck Club of America says that 60% of the accidents caused by brake troubles could be avoided.

One reason for these accidents is that the brake bands are located out of sight and any deficiencies are consequently liable to pass unnoticed until they have developed into serious troubles.

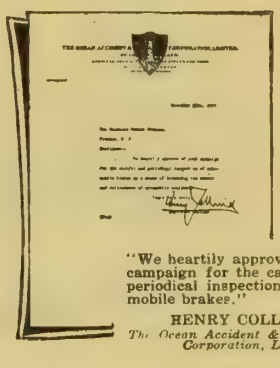
The plan of the "Brake Inspection Movement" is to prevail on every motorist to have his dealer inspect his brakes before the touring season opens. It is called to his attention that the brake-rods can usually be turned up two or three times before new brake lining is needed. A simple adjustment of the equalizers will frequently make the brakes safe instead of dangerous.

Less important evils have been corrected

Glaring headlights have been forbidden by legislation in many states. It needs no argument to prove that defective brakes are even more of a danger. It will probably be but a short time when motorists will be compelled by law to have their brakes inspected at regular, stated intervals.

Aside from the broad civic interest which you will have in this movement it will also command your support for business reasons.

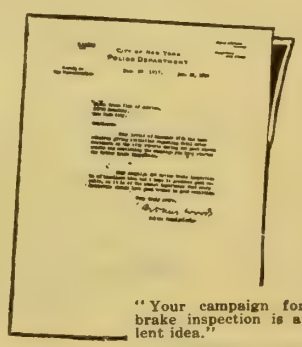
Where motorists are being urged so strongly to have their brakes inspected it is evident that this must result in increased brake lining business.



In closing, allow me to urge most strongly that you give this movement your active assistance, as well as your endorsement.

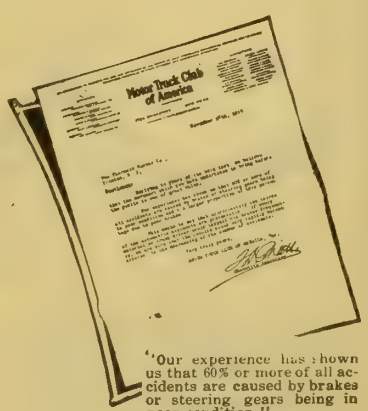
Sincerely yours,

H. F. Blanchard



(General Sales Manager)

THERMOID RUBBER COMPANY
Trenton, N. J.



"We heartily approve of your campaign for the careful and periodical inspection of automobile brakes."

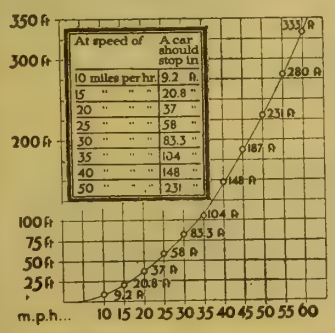
HENRY COLLINS
The Ocean Accident & Guarantee Corporation, Ltd.

"Your campaign for better brake inspection is an excellent idea."

ARTHUR WOODS
Former Police Commissioner New York City

"Our experience has shown us that 60% or more of all accidents are caused by brakes or steering gears being in poor condition."

T. D. PRATT
Motor Truck Club of America



$V^2/10.8$ Will your car do this?

Automobile engineers have proven that when brake mechanism is right and road conditions average, any car should stop at distances and speeds given by the chart.

V^2 means the square of the velocity or speed of your car. 10.8 is the proven factor of retardation under average road conditions. This factor decreases on smooth slippery roads to 6.7 and increases as high as 17.4 on rough worn roads. The chart represents the average condition and other conditions can readily be figured by changing the factor within the given limits.

Remember that your brake mechanism is not "right" unless its brake lining has the ideal co-efficient of friction. The better the brake lining the quicker your stop.

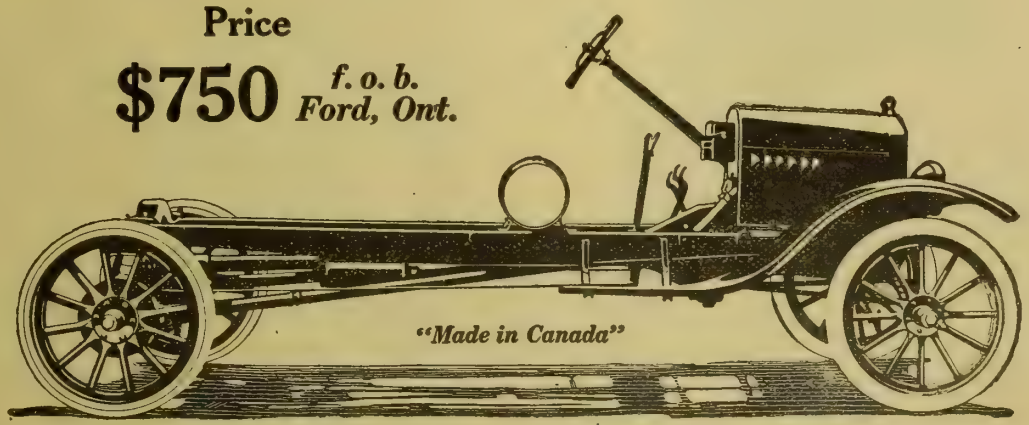
Ford ONE-TON TRUCK

COUNTRY-WIDE interest and comment have followed the recent appearance on the market of the new Ford One-Ton truck.

It is now possible to get a serviceable commercial car of one-ton carrying capacity that also embodies the desirable qualities of Ford sturdy construction and low up-keep expense.

The Ford passenger car has proved itself the most economical and serviceable automobile in the world. And this latest Ford model differs from the standard Ford chassis only in being constructed for heavy-duty service.

The frame is built of heavy steel, and the wheel base has been lengthened to 124 inches. A worm drive is used, and rear wheels are equipped with solid tires. Front tires are pneumatic. The standard Ford motor, transmission and ignition are embodied in the truck.



The Ford truck is supplied as a chassis only. This allows the purchaser to equip his car with any style of commercial body to suit the individual requirements of his business. It is an easy matter to get this equipment, for many of the leading body builders of Canada already have developed standard bodies of the various styles, made specially to fit the Ford truck.

Ford service has contributed in no small way to the reputation of the Ford car for day-in-and-day-out dependability. This same universally satisfactory service is available to owners of Ford trucks—an important thing to consider.

Realizing that a Ford model of the popular one-ton capacity would find immediate favor, this new truck is announced. Don't fail to see it on exhibit at the Ford service station in your town.

ECLIPSE MFG. CO. INDIANAPOLIS IND.

THE McKEE LENS SOLVES ALL HEADLIGHT PROBLEMS

Easy to Instal

No Tools Required

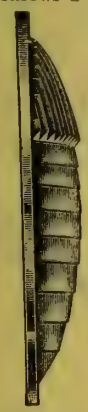
Safe to Ride Behind and to Drive Against

The New Ontario Motor Vehicle Law

Requires the beam of light to be thrown below a 42-inch "dead line" and a distance ahead.

The McKee standard Auto Lens does more than required by law.

Vertical and Horizontal Prisms and concave convex shape divert the road beam below the 42-inch level.



Throws a strong road beam of over 300 feet.

A wonderful side light of 100 feet, illuminating the roadside, enabling the driver to see around corners or car approaching.

An increase of the volume of light over plain window glass lens of 63 per cent. Eliminates the glare and penetrates the fog and dust.

Enhances the appearance of any car. Sizes to fit any headlight lamp.

Manufactured by and in the factory of the McKee Glass Co., the largest pressed glass factory in the world, insuring quick shipments.

means a new prospect for Lane's Unique Ratchet Wrench

FORD SET contains: 1 Handle 7 inches in length; 2 Screw-driver Bits; 1 Extension Bar 6 inches in length; SIX SOCKETS to fit all nuts and bolt heads on Ford Car, including the cylinder head.

STANDARD SET contains: 1 Handle 7 inches in length; 2 Screw-driver Bits; 7 Sockets to fit semi-finished Hex. Nuts, as follows: U.S. Standard from ¼ to ½ in.; A.L.A.M. Standards from 5-16 to 11-16 in.; Cap Screw Heads from 5-16 to ⅝ in.

This spring will see more motor cars in your town than ever before (it is expected there will be 100,000 new cars in Canada this season).

Get right after the new owners. They form the best class of prospects for Lane's Unique Ratchet Wrench. This handiest of auto tools is easy to display and always catches the eye of the ardent motorist. It is so very practical, so obviously "just the thing" for motorists that it requires merely suggestion on your part to create sales.

Lane's Unique Ratchet Wrenches are machine made throughout of the best material. Sockets are turned from Bessemer Steel and are warranted not to break or spread.

IVER JOHNSON

What's in a Name?

A great deal when that name is "Iver Johnson."

Ask any man, woman or child who can read the name of the safest revolver. Quick as a flash comes the answer, "Iver Johnson."

Ask the cyclist what bicycle rides the easiest, and wears the best, and the answer will be "Iver Johnson."

If you canvass sportsmen for name of the finest shot-gun for the price, nine out of ten will vote "Iver Johnson."

For nearly a half-century we have been building the highest quality into our products. And we haven't kept quiet about it either. Iver Johnson advertising is on a par with its merchandise, and the two form an ideal combination for the dealer. Iver Johnson products satisfy the consumer—always, and they give prestige to the dealer who carries them.

Presto

BODY BRACE AND RUNNING BOARD SUPPORT

Doubles the Life of the FORD CAR

Takes away all the wear and tear of unequal distribution of weight. It equalizes the spring action. Holds the car and all mechanical parts in a natural position. Prevents sideswaying and broken springs. Holds the drive shaft in position. The Presto Body Brace and Running Board Support makes the whole frame rigid and prevents running boards sagging and breaking away from fenders.

Easy To Install

Dealers: This is your opportunity to be first in your city with the best Body Brace on the market to-day.

Price in Canada $4.65

ADAMS-JOHNSON LUMBER CO.
307 Beacon Bldg.
OAKLAND, CAL.

March 31st, 1916.

H. W. Johns-Manville Co.,
San Francisco, California.

Gentlemen:

Your letter of the 30th, asking in regard to the Regal roofing paper which we recently took off of the buildings at our yard at Chico, California, has been received, and in reply will say that your r-ply Regal roofing had been used and had been on the building for about five years.

It had never been coated or painted since laid. I had it taken off under my personal supervision, and found it to be in excellent condition. It did not crack or tear easily, and I had all of it relaid on our new lumber shed. I will be glad to show it to your man or anyone else who desires to look at it any time. We are recoating it and expect it to last for many years. I will also add that we took the old cleats off in such a way that we did not find it necessary to strip the edges, and out of 3,200 ft. removed we did not lose over 100 feet by torn spots, where the paper had cemented itself to the roof because of pitch boards and excess paint in the paper.

Yours very truly,
(Signed) S. J. JOHNSON,
Secy. and Treas.

"—on the building about five years—never coated or painted since laid"

So says Mr. Johnson in his letter about Regal Roofing, and Mr. Johnson's experience isn't unusual. Customers everywhere tell us of applications that are giving service equally as good. There's a big market for Regal Roofing and there's a good profit for the man that sells it. Ask our nearest branch for the complete story.

North East, Pa.

"THE *defects* of a poor bicycle are remembered long after the *price* is forgotten."

That remark of a prominent Ontario bicycle dealer sums up the experience of many dealers.

C.C.M. Bicycles sell faster and easier each season, because riders remember their many good qualities and realize that the price is quite reasonable.

They help to build good-will for the dealer, besides yielding a good profit.

Desirable agencies are still open in a number of territories.

DEALERS IT WILL PAY YOU TO GET ACQUAINTED WITH US

The Hardware Dealer is the logical merchant to handle automobile supplies. It rests with you whether you will hold your farmer trade and increase both it and your local connections by selling a line of staple automobile supplies. Dealers all over the country are finding this to be true. We specialize in a few lines only of nationally known goods and represent the manufacturers exclusively in Canada. We are at your service with lowest prices. We are Canadian agents for

MOSLER SPARK PLUGS

19 Years on the Market

Spit Fire $2.00 — "Vesuvius" $1.25 — ½-inch Standard, the Ford Size "Superior" $0.75

Three Grades—a Type for Every Motor.

FRACTORS

The solution of the Headlight Problem

Fractors are made of clear, transparent glass in a cup-shaped form, with a series of prisms on the lower or outer surface. They fit directly under the lamp bulb, and, while they allow the light to pass through, and do not therefore obstruct or absorb it, the light rays are simply "bent" forward and thrown in a downward direction from both the upper and lower parts of the reflector, projecting practically all the light below a line 42 inches above the road level.
Photographs and tests show that they give the driver ample illumination on the roadway and at the roadside, and that the pedestrian in front of the lamps receives very little of the reflected light and will not be dazzled by the glare.
Fractors are made in one size only, which fits all lamps and can be quickly fitted by anyone in a few moments. The present lenses or headlight glasses are not displaced. They are sold at $3.85 per pair in Canada, and are being marketed by the Canada Sales Company, 183 Church Street, Toronto.

The simplest and most logical device to avoid glaring headlights. One size fits all lamps. A big selling line.

A Catalog for each line. **DEALER AGENTS WANTED.**

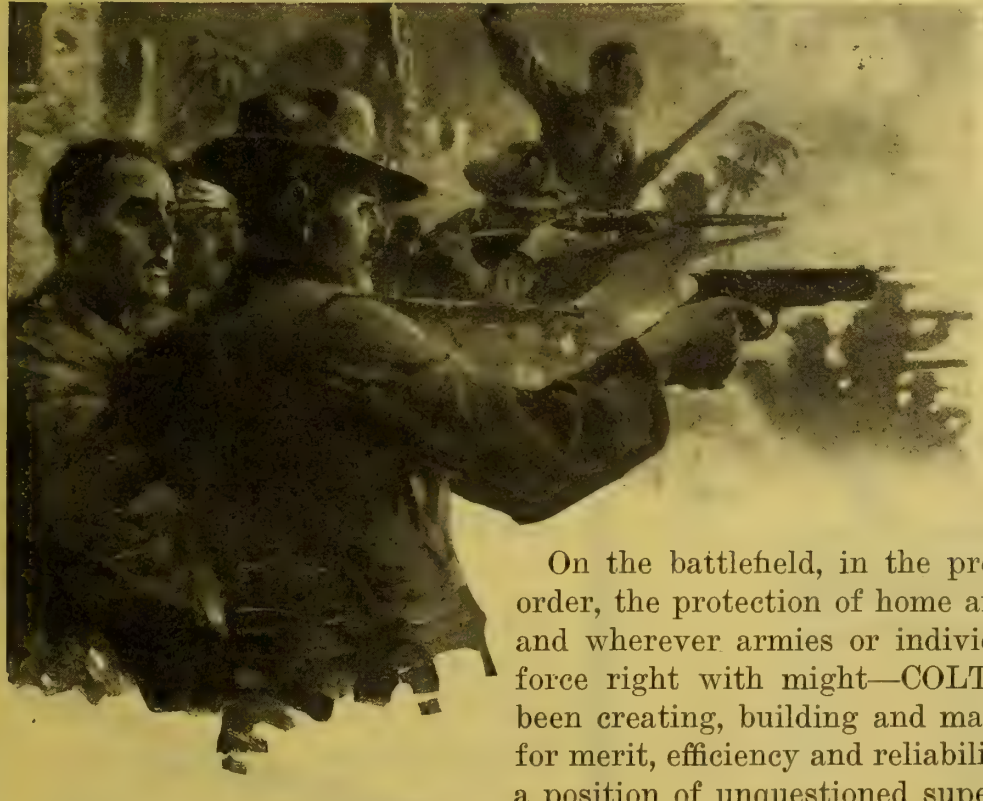
AN OPPORTUNITY
For the Hardware Dealer



The CB oil gauge is a real necessity and every Ford owner is a prospect. The best and cheapest insurance against burnt-out bearings. Always indicates the exact oil level and banishes the danger and uncertainty of "guessing." Can't clog, leak or come apart. Record seller for four years. Retail or list price, 75c; dealer's price, 45c, plus duty. Handled by leading jobbers of United States and Canada. If your jobber cannot supply you, write us direct.

STOPPIT RADIATOR CEMENT

is a sure cure for leaky radiators, representing the best to be had in an efficient, yet popular priced radiator cement. Like a good detective, Stoppit never leaves the trail until the leak is found and stopped. Positively harmless. Stoppit presents a very attractive appearance, being packed in metal containers lithographed in three colors. Retail or list price, 50c; dealer's price, $3.00 per dozen, plus duty. If your jobber cannot supply you, write us direct.

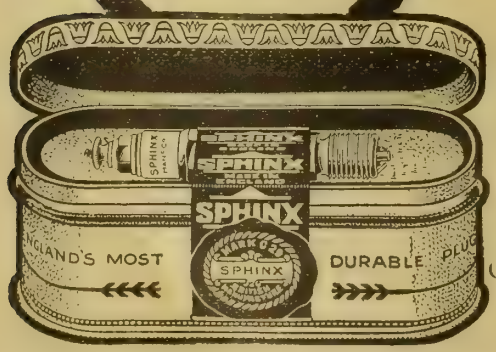
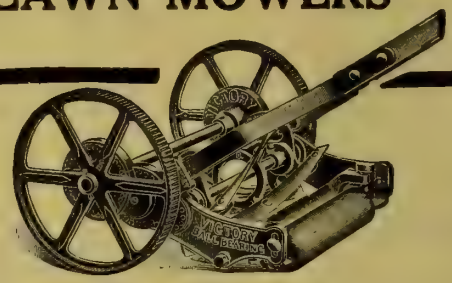
The Originality

which has secured for Sphinx Plugs their position of honour throughout the world also finds expression in the mode of their packing.



The arrangement is such that without breaking the seal which holds the

"SPHINX"



plug in the box, the lid may be lifted, revealing a removable card fully descriptive of the type of plug. Thus the obvious merit of sealing is coupled with the equally essential advantage of knowing precisely whether the plug under the seal is the pattern suitable for the purpose in view.

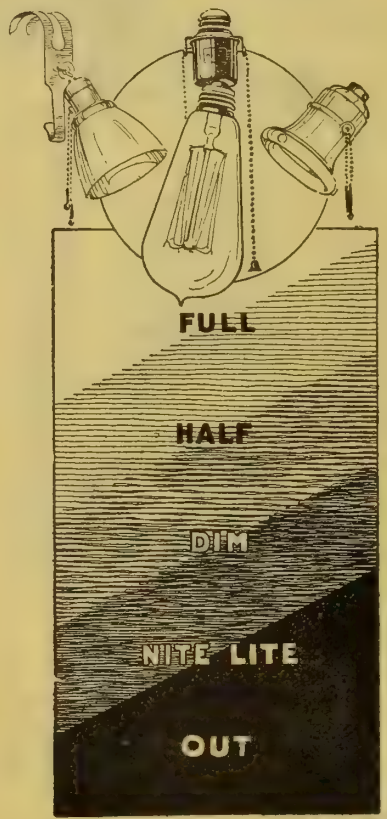
Sir Adam Beck says:

"In the near future a new rate would be given that would render it possible for the small householder to substitute electricity for gas."

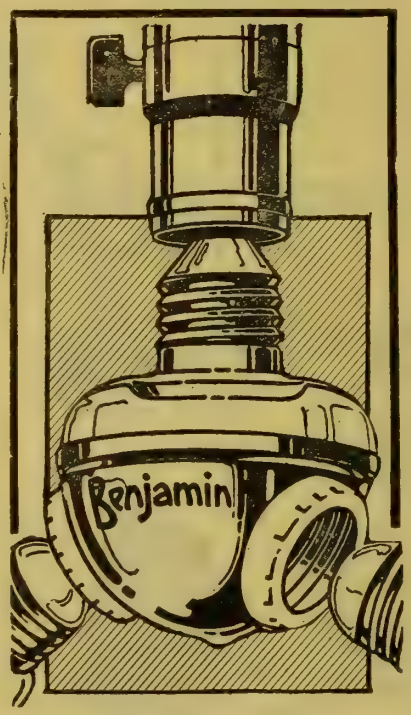
Address before the Hydro-Electric Railway and Municipal Electric Association, Toronto, February Thirteenth.



THIS is the time for action. Even to-day your customers are thinking *Electricity*—Electrical heating, cooking and lighting appliances—what about you? Are you ready now with a stock of

"BENJAMIN" DEVICES

that go to make Electricity a better servant in the home? Note these--



DIM-A-LITE

Enables you to turn Electric light up and down like gas.

—full-on, half-on, dim, down to a mere "speck" or entirely off—a great convenience and an economizer of electricity.

The "Dim-a-lite" comes in three forms: As an attachment to screw into the socket, as a permanent fixture, or as a portable with cord and plug.

Benjamin "92" Two-Way Plug

—just the thing to obtain an extra outlet for household electrical appliances from one socket.

Every electricity-using customer you have is a prospect for one or more of these plugs. With the Spring and Summer coming and the more general use of all kinds of heating, cooking and lighting appliances, the **Benjamin 92** "will have a big sale." Stock up now.

C-H Seventy Fifty SWITCH

Its place is on the cord of an iron, toaster, percolator, heater or any electrical appliance—just at the location desired—no reaching, no walking, to turn current on or off—no wasted current—because the *"Seventy Fifty Switch"* will always tell the operator when the iron is on or off. A new thing—comes in counter display box of ten. *Send trial order to-day.*

Counter and window displays of these articles will serve as a timely reminder.

The Improved "GEM SCRIBER"

The handiest tool a carpenter has in his kit. He uses it almost constantly.
Mr. Dealer—Have you any in stock? If not, better get in touch with your jobber, or write us direct.

F. BRAIS & COMPANY
1349 E. 90th Street CLEVELAND, OHIO

BRANTFORD
The Superior All Round
GLUE

You'll find that Glue sold in packages meets with much favor with the consumer—that's "Brantford" Glue. Very economical. Put up in ¼, ½ and 1 lb. packages.
Buy from your jobber.

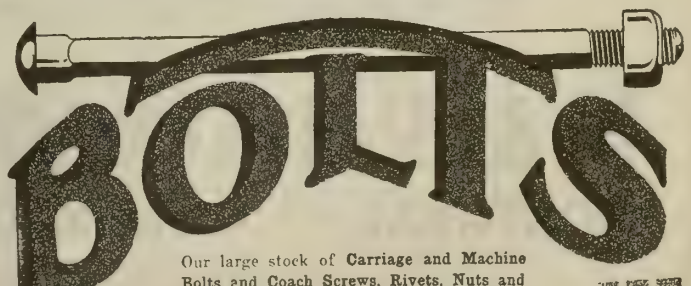
CANADA GLUE CO., Limited - - Brantford, Ontario.

Gipe-Hazard Service—

Prevents errors, saves time and labor—and is therefore better than any other system.

It's this way: Our Carrier Service and System are as good as we say they are. We say that together they beat any other service all hollow, and soon save your investment. We have a circular that tells our side of the story. Why not drop a post card to ask for it—to-day, please.

Level, Grade and Perpendicular Wire Cash Carriers, Parcel Carriers, Cable Carriers and Pneumatic Tubes.



GIPE-HAZARD STORE SERVICE CO., LTD.
113 Sumach St., Toronto, Can.

Crank Holders

Slip a $2.00 bill in an envelope for a dozen of these necessary accessories.
We will pay delivery charges.
Not much money involved and they will help to tingle cash.

APOLLO KEYSTONE
COPPER STEEL SHEETS

Working Quality Unsurpassed

Durability and Strength Combined

FROM
UNITED STATES STEEL
PRODUCTS COMPANY
NEW YORK, U.S.A.

THERE IS ECONOMY IN EXCELLENCE

Keystone Quality is worth more when resistance to rust is the influencing factor. To understand why the copper-steel alloy gives longer life to sheet-metal products, it is only necessary to inaugurate a few simple service tests of your own—that is if you will not accept our exhaustive definite proofs. You will ultimately convince yourself of the excellence of **Keystone Copper Steel.**

HE CLIPPER

There are three things that destroy your lawn. Dandelions, Buck Plantain and Crab Grass. In one season the Clipper will drive them all out. All dealers should investigate selling possibilies. Drop us a line and we will send circular and prices.

CLIPPER LAWN MOWER CO. Dixon, Ill.

FOOD CHOPPERS

Knives and plates made from wrought Swedish steel of finest quality. These choppers may be had tinned all over or enamelled white inside and japanned red outside. Stock carried.

F. W. LAMPLOUGH & CO.
Unity Bldg., Montreal

For Quick Sales

Recently a hardware dealer in Western Canada became overstocked with shotguns. He placed a want ad. in Hardware & Metal. We learned eventually that he not only disposed of his stock, but received several orders that he could not fill. If this man had kept this stock away, it would not only have deteriorated in value, but he would have had to pay taxes, insurance, etc. on it. If you have anything on hand which you wish to dispose of quickly advertise it in our want column. The quick results will make the first cost negligible.

Every Hardwareman from coast to coast should sell "Star" brand soles and lifts

Up! Up! Up! go shoes. There seems to be no limit—there's a very good reason though for these advances, but that doesn't help out the cost of living.

Every hardware man in the country has customers who would welcome the suggestion to keep a pair of soles and lifts on hand for a rush job when it's impossible to get to the repair man.

"Star" Brand Soles and Lifts will give perfect satisfaction.

Order from your jobber or direct.

THE BUYERS' GUIDE

If what you want is not here, write us, and we will tell you where to get it. Let us suggest that you consult also the advertisers' index facing the inside back cover, after having secured advertisers' names from this directory. The information you may desire may be found in the advertising pages. This department is maintained for the benefit and convenience of our readers. The insertion of advertisers' headings is gladly undertaken, but does not become part of any advertising contract.

We Manufacture Wire Solder

We make wire solder of any desired composition or size (guaranteeing the mixture to be exactly as represented) and for any gauge or size. It is made by our improved hydraulic process, which not only insures absolute uniformity in composition, but makes the wire perfectly smooth and of an even size throughout its entire length.

When not otherwise specified we send No. 8 gauge.

STRICTLY BAR SOLDER IS A FAVOURITE

Here's the strongest Ratchet Drill made

Bridge builders, ship builders, boiler makers, and all who ask constant heavy service from Ratchet Drills are proving the "Monarch" Square Sleeve Single Acting Ratchet to be the strongest Ratchet made. The body is made of Drop-forged Steel, and handle of solid Bar Steel. Parts subjected to wear are extra hardened. This is the ideal Ratchet Drill for heavy work.

Remember that a Ratchet is almost useless without a drilling Post. Therefore always suggest with every sale a "Keystone" Drilling Post. It will save many hours of time and permit of more perfect work.

"Keystone" Tools are known everywhere for quality of material and workmanship. If your jobber cannot supply you, write direct to us.

The KEYSTONE MFG. Co.
BUFFALO, N. Y.

Again in Demand

The wooden tub is back—the high cost of the metal tub is largely responsible, but a wooden tub has other advantages.

There is no galvanizing or plating to fall off. No rust to spoil clothes, and hot water retains its heat longer.

Cane's wash tubs will be favored. They last a lifetime and are built with the workmanship that has made Cane's Woodenware popular for over thirty-five years.

Order a supply of Cane's Tubs from your dealer for a Source of Good Revenue.

The Wm. Cane & Sons Company, Ltd.

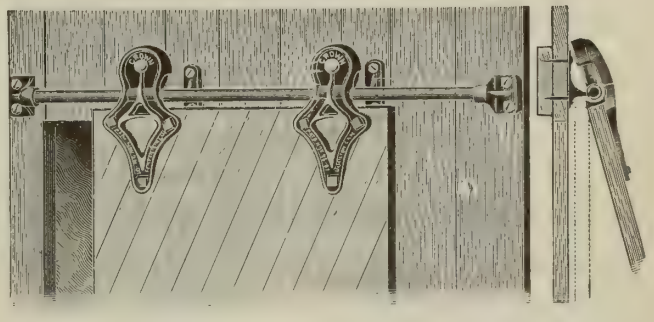
Manufacturers NEWMARKET, ONTARIO

Milbradt Ladders

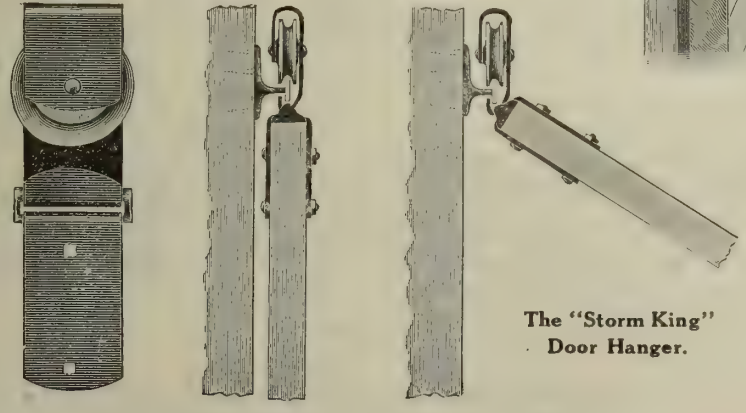
help to overcome the handicap due to shortage of labor. They are big time savers, save wear and tear on your fixtures and enable you to wait on more trade.

100,000 NOW IN USE

Easy to operate and noiseless. Give stores an up-to-date appearance and help to prove the fact that you are honestly trying to give the best of service.



Write for catalog showing a large number of styles suitable for all kinds of shelving.



Milbradt Mfg. Company

SPEED UP YOUR DOOR HANGER BUSINESS

Greater production will mean a bigger harvest of business for the hardware dealer this Spring and Summer. It means barns and sheds to be built. It means door hanger business. Here are two big sellers:

The "Storm King" Door Hanger.

THE "CROWN" BARN DOOR HANGER

Crown is a heavy malleable ball-bearing hanger to run on round track, which track is fitted with easily adjusted loose brackets.

THE "STORM KING" BARN DOOR HANGER

Storm King is an all-steel ball-bearing flexible hanger to run on 1¼" flat track.

SOLD BY LEADING JOBBERS.

SILBERTS
PLUM COULEE
RAWHIDE HALTER

Registered Trade Mark

It can't be done. If it can, then—

HERE'S WHAT WE DO:- IF A HORSE CAN BREAK THE LEATHER IN OUR DOUBLE-PLY LACE HALTER INSIDE OF TWELVE MONTHS I WILL REPLACE IT WITH A NEW HALTER FREE, WITHOUT ANY EXPENSE TO YOU, ON RECEIPT OF THE BROKEN HALTER.

SILBERT'S PLUM COULEE HALTERS

Some competitors are trying to imitate them by using Moose hides, but a test will readily prove the superiority of the Silbert's halters. Silbert's halters have a red tag guarantee attached. Look for this.

FREE—A beautiful card in four colors, 9¼ in. by 14 in., brings prominently before your customers Silbert's Rawhide Halters, and will prove an active sales agent. Write to-day.

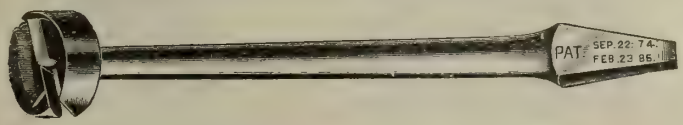
The Peterboro Lock Mfg. Company, Limited



Peterboro, Canada

Established 1885

MANUFACTURERS OF

BUILDERS' HARDWARE

Ship Hardware, Saddlery Hardware, Padlocks, Door Checks, Brass and Iron Castings, Stampings and other Hardware Specialties.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

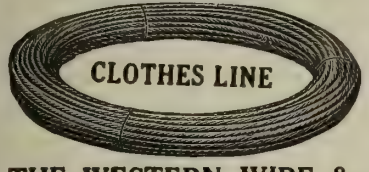
WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

LONDON
HIGH GRADE

Never Varies in Quality and Toughness

London Bar Iron is absolutely flawless and is uniform throughout, assuring the buyer intrinsic value for his money.



Our methods of production enable us to produce this high-grade Iron at the lowest prices. It will pay you to sell it—write us at once.

London Rolling Mill Co., Ltd.

Kindly Mention this Paper when Writing to Advertisers.

"Delta" Files

—we'll help you sell them

TRADE MARK DELTA

If the "Delta" Dealer never said a word about these good files but just kept handing them across his counter day by day he would gradually build up an enviable reputation for the quality of files he sells. But we believe in hurrying up that good reputation by telling our agents' customers facts about "Delta"—facts which interest file users and induce them to buy "Delta."

If you want to take on the "Delta" File Agency in your district we will help you make it the most profitable line in your stock. We'll help you interest all the big users of files and show you how to close them up.

This is a genuine plan we want you to try, so write and get full particulars.

HERE'S A PROFITABLE SIDE LINE.

The Pantaphone will occupy little space on your floor, and no one who comes into your store can pass its beautiful cabinet without displaying pleased interest. And anyone who is interested will be quickly won over by the full, resonant, beautiful tone reproduction. Many hardware merchants have sold Pantaphones as a side line with a minimum of trouble. You too can do it. Its price helps. Find out more about it.

15 cents

MONEY AS A MUNITION OF WAR

Charles H. Sabin, Head of the largest Trust Company in the World, Advocates Credit Expansion.

"Business men and wage-earners cannot lend money to the Government unless they can make money. And business must earn more money this year than last year.

"Increase in prices resulting from expansion of credit gives industry a stimulus. Extra demands of government finance and increased industrial needs absolutely require expansion of credit."

Thrift — Production — Expansion

The two quotations, and the three words above are points from "the most forceful and constructive article on business in war time that has been written since the beginning of the conflict." The article is by Charles H. Sabin, president of the Guaranty Trust Co. of New York, and you can read it in THE FINANCIAL POST this week. It is very much worth your attention. Not only is Mr. Sabin head of the greatest Trust Company in the world, but his understanding and knowledge of the fundamentals of business in relation to finance mark him out as an authority on whose words you can rely. Read this article. Act on its advice. Improve your business by the knowledge you gain.

Send 10 cents to The MacLean Publishing Co., Dept. C, 153 University Ave., Toronto, for a copy of

SOMETHING WOMEN WANT

It makes its own fresh soap suds that flows through the brush.

Home Helps Dish Washer

is a real home help that should be in every home. It is a simple, yet effective device which washes dishes cleaner with less soap and water. Every dish is washed separately with clean water, the insanitary dish towel is eliminated and the housewife's hands do not come into contact with greasy dish water.

The Dish Washer is attached to the kitchen hot-water faucet by means of a Faucet Connection which remains permanently on the faucet, where it acts as a deterrent to splashing.

With the beautiful, four-color

Home Helps Dish Washer

poster in your window and a supply of descriptive folders you can soon acquaint the women of your district with the merits of this handy economizer. Every woman who knows what the Dish Washer will do is anxious to own one. Its cleanliness, effectiveness and economy of soap, water, time and towels appeal almost irresistibly to all good housewives.

The Complete Home Helps Dish Washer outfit retails for $7.00, and includes Dish Washer, Dish Dryer, Faucet Connection and Dish-Wit-E Soap.

Here's a profitable specialty for every hardware dealer. If you are interested we have more to tell you.

Special terms and exclusive territory. Wire; collect.

Rinses with clear water by pressing a button. That's all there is to it.

Seals of Approval

The New York Tribune says: The Tribune Institute has thoroughly tested the Home Helps Dish Washer and has given it their full endorsement.

Today's Housewife says: The Household Efficiency Department of Today's Housewife has awarded its Diploma to the Home Helps Dish Washer after giving it long and thorough tests.

Good Housekeeping says: The Good Housekeeping Institute has awarded the Star of Approval to this Dish Washer, as well as their full endorsement.

Some Canadian territory still open to live hardware dealers.

Be the Sole Agent for your locality

PEDLAR'S PERFECT METAL CEILINGS AND WALLS

There are some great selling points for the hardware merchant who pushes the sale of Pedlar's Perfect Metal Ceilings and Walls.

First there is beauty and variety of design. From our varied stock of designs and period styles a selection can be made that will meet every requirement. Then there is their permanence. A Pedlar Metal Ceiling will outlast the structure to which it is attached. Also their economy. Once put on, they are on for a lifetime. They cannot crack, burn, break away or in any other way entail renewing. And they are so easy to put on—Any handy man can put up a Pedlar Ceiling.

A WORD TO WISE DEALERS!

For large interiors, such as Theatres, Picture Shows, Restaurants, Offices, Schools, Churches, Metal Ceilings and Walls are ideal. Push the Pedlar line—the most complete and satisfactory.

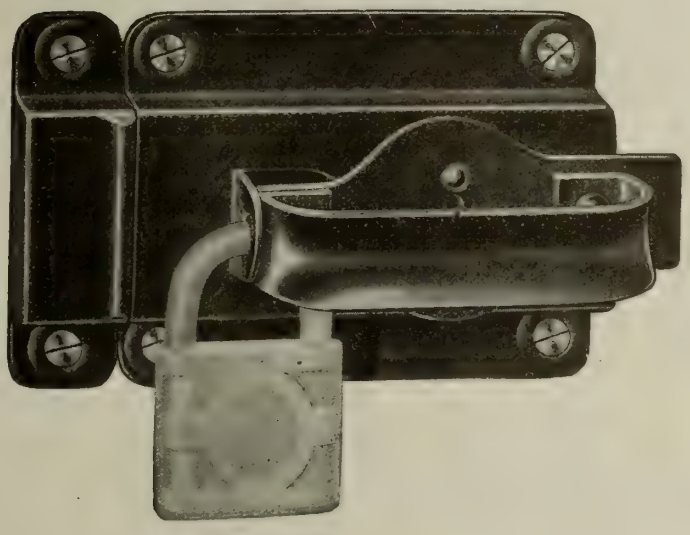
U.S. Poultry Fence

It's so stiff and satisfactory that it does not require top rail and base board or so many posts as the old style netting.

Guaranteed 5 or 6 times as strong and at least 100 per cent. better in every way. All parallel wires are of even length and all meshes of uniform size. They can't be otherwise the way it's made.

Made in heights from 12 to 72 inches. Galvanized before or after weaving. Put up in 150 foot rolls and sold by the square foot.

It's not merely a substitute for the old style netting. It's something much better for less money to the consumer and sells on sight. It is handled only by the legitimate trade —*the dealers*. It's the strongest, cheapest, most sightly and best fence for the purpose yet invented.



Rolls out flat and even, does not buckle or bulge.

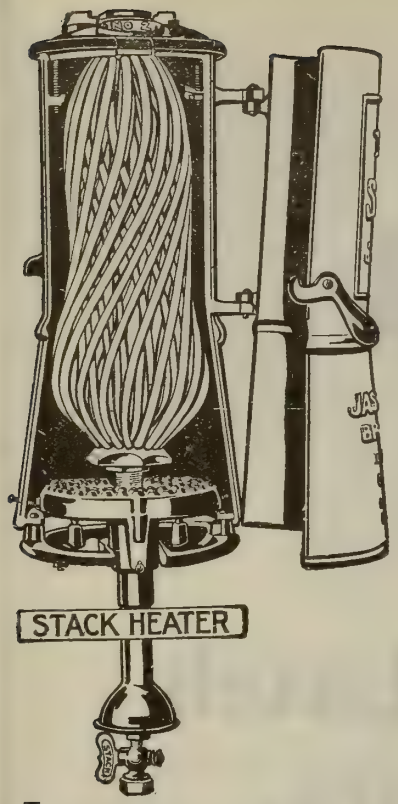
A Popular type of Latch for swinging doors

If you want to sell real latch satisfaction, here it is. No more bruised and scraped knuckles when opening the door—the handle is placed back of centre of case, away from the jamb, preventing any injury to the hand. No more flattened or broken handles by banging against building—the little catch holds the door open. A positive lock is guaranteed by the wide opening in the strike, even if the door should sag. Can be locked with padlock, as illustration shows.

No. 25 is entirely of steel with exception of spring, which is of unbreakable solid brass that will not rust. Bolt is large, is sherardized, and has rounding face, which works easily on the roller-shaped edge of the strike. It is adjustable for doors 3/4 inch to 2 1/4-inch thick. Installed by simply boring a half-inch hole for handle, and inserting screws.



Packed the "National" way, one in a box with screws and catch to hold door open. Five dozen in a case, weight per dozen 20 pounds.

Did you get your copy of our 1918 Catalogue?

National Manufacturing Co.

STERLING, ILLINOIS

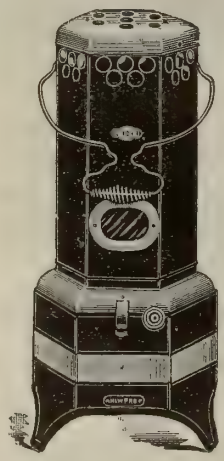
The simple natural law



that water has a tendency to rise on being heated is taken into account in the construction of the Stack Gas Water Heater. The copper water pipes rise almost perpendicular from the base of the heater where the gas flame comes into contact with them. This means rapid circulation and quickly heated water. It is the reason why the Stack Heater will heat small quantities of water with less gas than any other heater.

It is a convincing fact to intending purchasers.

Success and Your Associates

ALWAYS associate with men who are earning more money than you are. Such is the advice given by a man whose name is known the world over for his own success and the business which he created. It is good advice of a certainty, but we are not urging that it is the best advice. At the same time it is wise to associate with better or bigger men than you are yourself, because you are likely to be lifted up to their levels.

Most of us would probably like to be the intimates of J. P. Morgan, or of John D, or of Charlie Schwab, or Canny Andrew. If we had a speaking acquaintance with John Wanamaker, or Lord Beaverbrook, or Lord Shaughnessy, and with other distinguished and successful men, we would take comfort from the fact.

And most of us would feel rather small and uncomfortable if we were placed beside President Woodrow Wilson at a dinner table, or beside Sir Robt. Borden, Sir Herbert Holt or Thomas Findley. And the reason would probably be that we know so little of the knowledge that really counts. If these great men engaged us in conversation we would probably find ourselves knowing very little about the things that matter.

This will illustrate the point:

Here's a true story. A Toronto manufacturer found himself on a train going to Albany in company with a number of distinguished Americans about to attend the inaugural ceremonies of a State Governor. A washout led to a delay, and the Canadian was thrown into close association with senators and congressmen and prominent lawyers. They bantered the little Canadian about Canada. He had the pluck of a bigger man. He had been a constant reader of THE FINANCIAL POST, and had absorbed many facts about Canada. He surprised his American traveling companions with his positive, well-informed and wide knowledge of Canada. When the company reached Albany, the Canadian was persuaded to attend the ceremonies, and was introduced as the man who knew all about Canada. The Governor was interested in Canada, and said so, and the little Canadian found himself telling the story of Canada very ardently to a very attentive listener, much to the amusement of his friends who introduced him.

This man made a hit on that journey, and many friends. One of the company gave him a stock market tip worth a fortune.

The point of this story is: You, as a Canadian, can make yourself informed very fully and intelligently if you become a regular reader of THE FINANCIAL POST. You can make yourself a worthy companion and intimate of presidents and magnates. The world likes to listen to men who know something well, and who can talk interestingly and informingly on the subject of their study.

You can become worth listening to if you know your Canada well. And you can get the kind and amount of knowledge concerning Canada which will make you interesting to others if you will read THE FINANCIAL POST regularly each week.

IF you read THE FINANCIAL POST REGULARLY you will find yourself keeping company with the highest paid staff of editors engaged on any publication in Canada—trained men who know how to make others know what they know and learn.

You will find yourself living in a most interesting world—the great, throbbing world of business. You will have your thoughts tremendously stimulated and helpfully directed. You will find yourself becoming a fit table companion for big men — this because you will have knowledge of a quality that will keep you from shame.

What is it that keeps you and THE POST separated? It cannot be its subscription price of $3. Probably it is because you are not very well acquainted with this paper.

We are going to put it to you this way: If you have the desire to be worthy of association with big men, then prepare yourself for such association by reading THE POST, and to make acquaintance easy, we provide the coupon below. It offers you THE POST for four months for a dollar bill.

The MacLean Publishing Company, Limited,

143-153 University Avenue, Toronto.

Send $\frac{\text{me}}{\text{us}}$ THE FINANCIAL POST for four months for One Dollar. Money $\frac{\text{enclosed}}{\text{to be remitted}}$

Vol. 30 TORONTO, MARCH 30, 1918 No. 13

Must Obliterate Wine Measure

Goods That Still Remain in Stock and Measured According to United States Measure Must Not Carry Designation of Amount Contained—Only Dominion Measure is Legal in Canada

CONSIDERABLE interest has been aroused in the retail trade over the announcement that it is illegal to sell commodities according to the United States wine measure. There are a goodly number of varnishes and paints which are put up in the United States and are labeled as half pints, pints, and quarts. The point has been raised as to where the retailer stands who happens to have a stock of these goods on hand. HARDWARE AND METAL has been advised by J. J. McConvey, chief inspector of weights and measures for the Central Ontario Division, that the spirit of the law will be complied with if the words denoting the wine measure are obliterated. In other words, where paint and varnish is manufactured in the United States the containers of which hold only wine measure, they can still be sold if they are not designated as containing a certain measurement according to the wine measure.

The act indicates that these goods may still be sold but the contents must be indicated by weight in pounds or in ounces or in some other way besides referring to them as containing "pints, half pints, quarts," and other forms of designation. If any reference whatsoever is made to the contents by measure it must be in Dominion measure only.

Goods of Wine Measure

The point has furthermore been raised as to whether or not it is illegal to sell goods such as saucepans, fruit jars and similar articles which may have been made in the United States according to the wine measure standard. Questioned on this point Mr. McConvey stated the act made no provision on this point. The test of legality would seem to be whether or not such utensil were used as a measure. If commodities were measured out in such utensils and sold according to that measurement the party so doing would be liable under the act provided the amount so sold did not correspond with the Dominion or Imperial measure.

A concrete instance of this might be cited. A glass jar which would hold only the wine quart measure could be sold and the act would not be violated. But should the retailer fill that jar with coal oil or syrup or some other commodity and sell it for a quart the amount contained therein would only be equivalent to the wine measure and he would thereby come under the law. The test for the legality would seem to lie in the fact that such a jar would be used as a measuring instrument. If it were used as a measuring instrument and contained only the amount of the United States wine measure it constitutes an illegal act.

Act Bearing on This Point

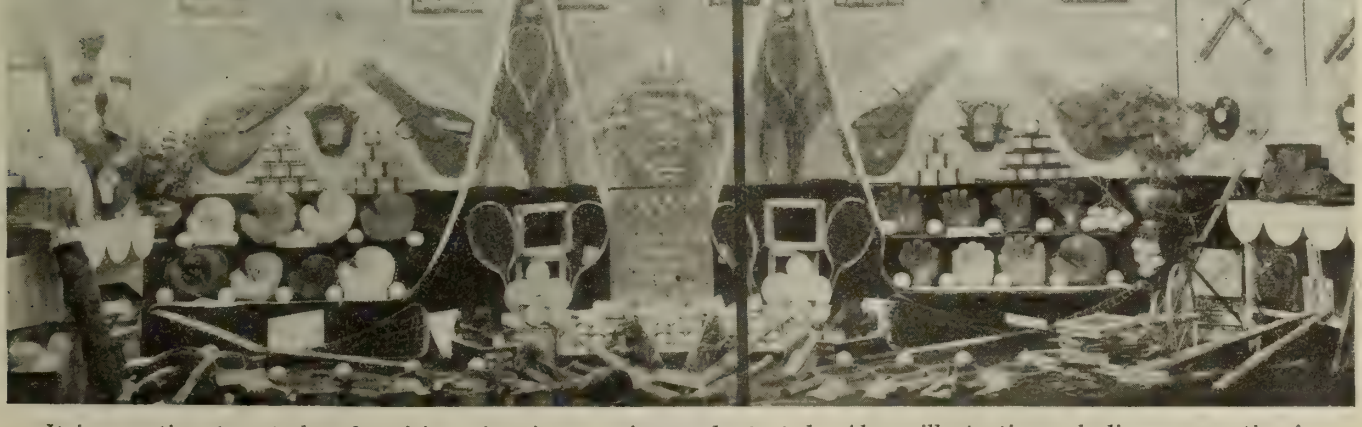
The points in the act which bear on the above matters are shown in the instructions sent out to the various inspectors of weights and measures throughout Canada as follows:

Ottawa, December 6, 1917.

WINE MEASURE

Sir.—For many years complaints have been made as to the sale in Canada by wine measure of bottled and tinned goods—e.g. ink, essences, extracts for cold drinks, etc., pickles, olives, condiments, oils, paints, varnish, ets., the same being put up by American houses on the United States wine measure unit.

The United States unit gallon is roughly 20 per cent. smaller than the Dominion unit gallon, so that United States houses quoting on a basis of pints, quarts, etc., has an improper advantage over Canadian houses engaged in the same business.



Inspectors, dealers, manufacturers and all others concerned, are therefore advised:—

That the sale of anything in Canada by wine measure is illegal.

That the offering for sale of any goods of which the contents are clearly marked in some unit of United States measure is illegal e.g., "1 Pint U.S.A. Standard.".

That representing unmarked container goods as pints, quarts, etc. When their contents are actually United States measure (wine measure) is illegal.

Packages and container goods may be put up and sold without any reference to the measure of the contents, or the contents may

It is now time to get the advertising of spring sporting goods started. Above illustration embodies a suggestion for a window display.

be indicated by weight in pounds or in ounces, but if any reference whatsoever is made to the contents by measure **it must be in Dominion measure** only.

PENALTIES

Secs. 24 and 60 of chap. 52, R.S. 1906, "Weights and Measures Act" provide as follows:—

24. Every contract, bargain, sale or dealing made or had in Canada, in respect of any work, goods, wares, or merchandise, or other thing which has been or is to be done, sold, delivered, carried or agreed for by weight or measure, **shall be** deemed to be **made** and had **according** to one of the **Dominion weights or measures** ascertained by this Act, or to some multiple or part thereof, and if not made or had, shall be void, except when made according to the Metric System.

60. Every person who sells by any denomination of weight or measure other than one of the Dominion Weights or Measures, or some multiple or part thereof.....shall be liable to a penalty not exceeding **twenty dollars for every such sale.**

Inspectors will distribute this circular to all dealers, importers, and other parties concerned.

J. U. VINCENT,
Deputy Minister.

To Inspectors of Weights and Measures.

According to the above instructions it will therefore be seen that the sale of articles such as fruit jars, saucepans, and similar articles of the wine measure is apparently not illegal. It is only when such articles are used as a means of measuring that the seller becomes liable. In other words, it is not the container against which the law is leveled, but against the amount of goods in the container. "That the sale of anything in Canada by wine measure is illegal," is the terms in which the act provides for the same.

Can Sell by Weight

The section providing for the sale of goods which have already been placed in containers holding only the wine measure is as follows:

"Packages and container goods may be put up and sold without any reference to the measure of the contents or the contents may be indicated by weight in pounds or in ounces, but if any reference is made to the contents by measure it must be in Dominion measure only." Where paint or varnish is sold in cans which contain only the wine measure and the words "Half pint, pint or quart" are not obliterated the dealer is liable under the law to a penalty not exceeding twenty dollars for every such sale. To be on the safe side, therefore, every dealer who may have a stock of paints, enamels or varnishes or any other commodity put up according to the wine measure had better go over his stock and obliterate all terms designating them by measure. Some wholesalers are getting over the situation by referring to such containers as No. 1 size, No. 2 size, No. 3 size, and so on, without making any reference whatever to the amount of the goods by measure.

Manufacturers Should Take Heed

Manufacturers who have been accustomed to placing their goods in the wine measure containers and so designating them will need to take cognizance of the law, for they will be held liable under the provisions of the act as the retailer who in turn sells to the consumer. Concerns in the United States doing business in Canada will either have to conform to the Imperial or Dominion measure or they will have to find some other means of designating their containers. As pointed out above, these manufacturers would come within the scope of the law if they still continued to sell the same size tins or containers, but the contents would need to be designated as being so many pounds or ounces.

Care Should be Taken

Care should be taken by merchants to see that their transactions come within the bounds of the act. While the containers themselves might be sold without making the seller liable, just as soon as some contents are placed therein and offered for sale according to the wine measure the seller becomes liable.

Taxable Articles in a Hardware Store

Medicated Stock Foods Subject to Tax—But Unmedicated Stock and Poultry Foods Not Subject—Branded Articles Call for Tax—Test is Whether Commodities Are Used as a Cure or Remedy for Some Disease

THE question has been raised by a hardwareman as to whether wood alcohol in bottles, arsenate of lead in tins, Paris green, saltpetre, poultry and stock foods in packages are subject to the war tax stamp duty. The question has also been asked as to what other articles are sold in a regular hardware store that are subject to the tax. Information secured from the Inland Revenue Department at Toronto was to the effect that wood alcohol in bottles, Paris green and saltpetre do not require the tax. Poultry and stock foods do not require a tax if they are unmedicated, that is, if they have some medicinal properties they are taxable, but when simply used as foods they are not taxable. Arsenate of lead in tins, if sold under the label of an article for the destruction or cure of some disease or for an insecticide would come under the inland revenue tax. If it is simply labeled "arsenate of lead" without any qualifying sentence or words to show what it is used for the Inland Revenue Department states that it is not taxable, for then it would simply come under the classification of a pharmaceutical article.

What Constitutes Taxable Articles

Generally speaking the point of differentiation between taxable and non-taxable articles lies in the fact of whether or not they are a cure or remedy for some particular ailment or ill. If they are sold for such as a cure and are so labeled they are taxable. The question was asked as to where Paris green would come under this classification, for it seemed that it was a cure for potato bugs and other parasites. The information forthcoming was that "Paris green does not cure: it kills." Furthermore, it is what is known as a pharmaceutical preparation. In other words there are certain commodities which are recognized by the British and United States Pharmacopoeias and by the French Codex as being kept in stock without special preparation or compounding. The section in the act relating to the definition of a proprietary or patent medicine is as follows:

(iv) "Proprietary or patent medicine" includes pills, powders, tinctures, troches or lozenges, syrups, cordials, bitters, anodynes, tonics, plasters, liniments, salves, ointments, pastes, drops, waters (except mineral waters in the natural state or carbonized), essences, oils, and all other medicinal preparations or compositions bottled or packed ready for sale in respect of which the person making or preparing the same has or claims to have any formula or secret or occult art for the making or preparing thereof, or has or claims to have any exclusive right or title to such making or preparing, or which are prepared or made under any letters patent or which are designated by a trade mark, or which if prepared in accordance with any formula published or unpublished are recommended to the public by the makers, vendors or proprietors thereof as remedies or specifics for any diseases or affection whatsoever affecting the human or animal body, but does not include any medicinal preparation or composition recogized by the British or the United States Pharmacopoeias or the French Codex as official."

Other Classifications Included

In addition to the proprietary articles as described above, the tax stamp must be affixed to perfumery, non-sparkling wine of the grape, champagne or sparkling wine. Anyone failing to affix an adhesive stamp as required shall incur a penalty not less than fifty dollars and not exceeding two hundred and fifty dollars. It will therefore be seen that the penalty for non-compliance with this act is a heavy one. Every retailer should take pains to make sure that he is not selling any of the commodities forbidden to be sold without the necessary stamp. Retailers are required by the act to affix the stamp themselves. They may or may not add the amount of the stamp to the price of their goods, as this becomes a business proposition as between themselves and their customers. By re-

tail price is meant the actual amount of money exchanged in the sale of the article.

When Stock Foods Carry Tax

The section in the act referring to the payment of tax on stock foods is as follows:

"Condition powders, veterinary liniments, medicated stock foods, cough drops, talcum powders, animal poisons, camphorated chalk, styptic pencils, headache powders and wafers, carbolic salves, liquid rennet, eyebrow pencils, grease paints, green soap, antikamnia tablets, are subject to the war tax. Animal foods, unless medicated and advertised as such, are not subject to the tax. Disinfecting fluids and powders, if used as remedies or specifics for any disease or affection affecting the human body, are subject to the war tax."

It will be seen from the above that stock and poultry foods which are not medicated are not subject to the war tax. However, if they are sold under a brand name even though they are unmedicated they are subject to the war tax stamp duty. As most of the stock and poultry foods are sold under a brand name and are advertised as having medicinal properties they are effectually brought under the scope of the act and are, therefore, taxable in the majority of instances.

Where Trade Marked Articles Not Taxed

As stated previously articles which are included in the preparations or compositions recognized by the British or United States Pharmacopoeias or the French Codex are not subject to the tax. Under this classification would come such articles as Paris green, saltpetre, alcohol. However, if any of these preparations are sold under a special trade mark or as the product of some special individual firm they become subject to the tax. The section making provision for this is as follows:

"If a preparation recognized by the British or American Pharmacopoeias or the French Codex is sold under a special trade mark or as the product of some special individual or firm same is subject to the tax.

"The only exception to this rule is when the label of such preparation gives the name under which same is actually recognized by the Pharmacopoeias or the Codex, and further, gives the information that it is prepared in accordance with the formula of same given in the Pharmacopoeias or the Codex.

"For instance: Jones' glycerin is subject to the tax unless the label contains the following information: This preparation is prepared in accordance with the formula given of 'Glycerin' in the Pharmacopoeia."

The above rule would apply to any commodity which a hardwareman might handle in his stock.

Medicated Soaps and Sheep Dip

According to the provisions of the act all medicated soaps are subject to the tax. "Soaps of all kinds whether in solid, liquid, powder, or paste form, if not medicated, are exempt." In a previous citation from the act it was shown that green soap is subject to the tax. This soap would come under the classification of a medicated soap. Some hardwaremen carry medicated soaps as part of their stock. As sheep dip usually comes under the classification of a trade marked or branded article it becomes subject to the tax.

General Rule Governing Tax

Briefly stated the general rule governing the tax on various articles sold in a hardware store is as follows: (1) Remedies or specifics for any disease or affection whatsoever affecting the human or animal body; (2) Trade marked articles carrying the name of some special individual or firm; (3) An exception is made in rule 2 when it applies to certain pharmaceutical articles and the label of which states that the commodity is made according to the formula of the same given in the Pharmacopoeias or the Codex.

List of Exempt Articles

Following is a list of some of the preparations which are recognized by the British or United States Pharmacopoeias and the French Codex, and as such are exempt from the provisions of the Special War Revenue Act. The majority of these articles are of course handled in the drug store. Some however are handled in a hardware store and it is for the purpose of allowing the hardwareman to decide for himself what articles are exempt from the act that the list is here given:

Acacia Bark
Acetone
Acid Acetic
Acid Acetylsalicylic
Acid Boric
Acid Carbolic
Acid Phosphoric
Acid Sulphuric
Acid Tartaric

Zinc Ointment

Other Exempted Articles

The following is a list of some preparations which are also exempt from the provisions of the act:

Absorba Corn Pad
Angustura Bitters
Animal Food (unmedicated)
Aspirin
Baby Foods
Beef, Iron and Wine (if sold as defined in Pharmacopœia)
Belladonna Plasters (sold as such under no special maker's name)
Bird Seed
Blue Ointment
Bona Fide Flavoring
Bunion-reducer
Bunion-right
Camphorated Oil
Cements
Charcoal Pepsin
Court Plasters
Dyes
Filling, Gold and Silver (not being proprietary medicine used by dentists)
Flavoring Extracts
Fluid Magnetic
Foods, such as:
Horlick's Malted Milk
Nestle's Food
Saskett's Food
Fruit Syrups
Ginger Tablets
Ginger Wines
Grape Juice
Herbageum
Hoof Oil
Hydrogen Peroxide
Imperial Granum
Italian Castor Oil
Lifebuoy Soap
Lime Juice
Lime Juice Cordial
Liquid Peptonoids
Louse Killers
Lozenges (linseed, liquorice, chlorodyne)
Lythia Tablets
Malt Extracts
Malzinose
Moth Balls
Olive Oils
Opaline
Pedico Foot Soap
Petrolatum
Petroleum Jelly
Phenol
Plasters (adhesive, bunion, corn, court)
Precipitated Sulphur
Seidlitz Powders
Soda Bicarbonate
Soda Phosphate
Spirit of Nitre
Sugar Milk
Toe Right
Toe Flex
Tooth Soap
Vermouth Wines
Water Glass

LAW PROVIDING FOR AMOUNT OF TAX

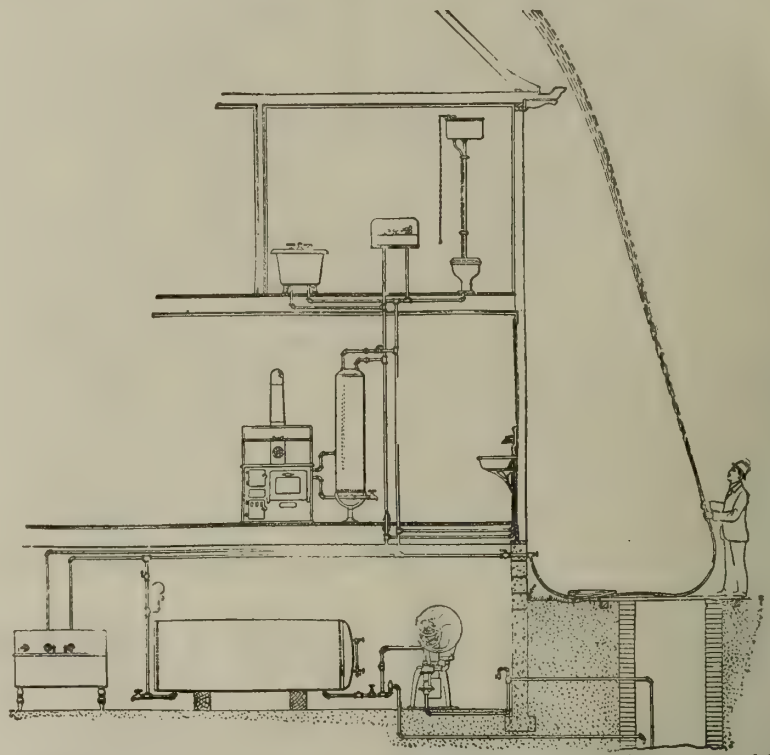
Following is complete section of War Tax Stamp Duty Act providing for amount of tax. Articles carried by a hardware store would quite generally come under sections (a) and (b).

Article.	Stamp of the value of
(a) A proprietary or patent medicine,	
(b) Perfumery, the retail price for each bottle or package thereof being—	
Twenty-five cents or less	$0 01
more than twenty-five cents for each twenty-five cents and in addition for any fractional part of twenty-five cents	0 01
(c) Wine of the grape, non-sparkling, each bottle or package containing—	
one pint or less	0 03
one quart or less, but more than one pint	0 05
a quantity greater than one quart for each quart and in addition for any fractional part of a quart	0 05
(d) Champagne and sparkling wine, each bottle or package containing—	
one half pint or less	0 13
one pint or less, but more than one-half pint	0 25
a quantity greater than one pint— for each pint and in addition for any fractional part of a pint	0 25

George B. Ball, Toronto representative of A. C. Leslie & Co., Ltd., has been invalided home from the front, and is at present in Toronto. Mr. Ball was quartermaster-sergeant of the 43rd Battery, and it is hoped that he may be able to resume his duties with the Leslie Company again in the near future.

Undeveloped Field for Water Systems

Rural Communities and Small Towns and Villages Offer Excellent Field For Hardwareman to Increase His Trade—Bathroom and Water System Has Become a Necessity—Evidence That People Look Upon Water Supply as Essential



WITH the desire for more conveniences in the homes of the farming community and in the smaller towns and villages, a water supply in the home is becoming more and more a real necessity. It is no longer a luxury to have hot and cold water in the home. It is no longer a luxury to have a bathroom. These thinks are everyday conveniences. They contribute as much to the health of a family as any other factor in the arrangement of the household. Hardwaremen in rural communities have but recently realized the possibility for trade in this line. Quite a number of them in consequence have taken on this line and are finding a rich source of profit and an ever expanding field of trade. The principle as applied to the water system is what is known as the pneumatic system as contrasted with the overhead tank system. In the instance of the pneumatic system the tank can be placed in the basement and water can be forced to the top of the dwelling. With an overhead tank system the water is pumped to the top of the building and the force is secured through gravity or fall of the water.

Principle of Pneumatic Systems

The pneumatic water systems are designated on the principle of the syphon bottle. By pressing the valve on a syphon bottle water is released with sufficient force to carry it a considerable distance. The force which causes this water to be carried is compressed air in the upper part of the bottle. The water is forced into the bottle against the resistance of the contained air and power is thereby stored up which will eject the water when the time comes to release the stopper. With a syphon bottle it will be remembered that a tube runs down from the neck of the bottle to somewhere near the bottom of the bottle. The compressed air in the top of the bottle forces the water up through this tube. If a tube were placed in the side of the bottle at the bottom and carried vertically outside it would operate in the same manner. If a tap were placed at a considerable distance from the top of the bottle and at the top of the tube the water would be discharged at the top of the tube when the tap is released.

Same Principle as Syphon Bottle

From this description of the working of the syphon bottle it will be understood how water may be had on tap in any room in a dwelling when such a pneumatic tank is placed in the basement. The airtight tank in the basement acts the same as the syphon bottle. Water is pumped into it against the air contained in the tank either from a stream, a well or a spring. This pumping of the water into the tank generates sufficient force by compressing the air to carry it to the top of the building. Or again, it can be forced through a line of pipe to greenhouses outside, to hydrants on the lawn or in the garden, to the farm, to the garage, to the poultry house.

Above diagram shows the location of pneumatic water tank in basement with complete water system—Hose attachment for watering lawns and garden is also possible—City conveniences can be had in country through such a system.

Methods of Operation

There are various methods of operating these pneumatic water systems, namely, by hand, gasoline engine or electric motor. The hand pump and tank for a small dwelling can be supplied for as low as $75, while the power pumps range all the way from those with quarter horsepower motors to those capable of giving a water supply for a town with a population running up to as much as ten thousand people. The electric power tank can be made the most convenient in that the pump is started and stopped automatically according as the pressure rises and falls. When the pressure gets down to a certain level it automatically throws on an electric switch which starts the pump in operation. When the water has reached a certain pressure in the tank it is automatically shut off. A small one-quarter horsepower motor is capable of pumping water for a 125-gallon tank. The cost of the operation is estimated to be very small in the instance of electricity. With the hand pump the only cost of operation is the time spent in working the lever.

Farmers Should be Purchasers

With prosperous conditions on the farm for the past two years and with the possibility of still greater prosperity during the present year there should be a fine field for the sale of these articles in the rural communities. The city water service is not a thing which need be restricted to those living in the city. It is possible to give the same excellent service to the isolated farm home or to the home in the village and small town. A bath with running water has come to be considered as much a necessity as it is to have water to drink. The hardwareman should endeavor to develop this trade in his neighborhood. There are hundreds of homes throughout the country which should have the conveniences of the city in this respect in order to make life a little more pleasant.

Wherein Production is Aided

The reason so many of the young men and young women have left the farms in the past is because of the meagre conveniences to be found in the average farm home. Once the convenience and comfort to be found in a house with running water and bath have been enjoyed on the short stay in the city, the young people have in a measure been wooed away from the old homes which lack these conveniences. They are the little

things which go to make life more livable. Those who have enjoyed them once are seldom content to go back to the old homes without bath and running water. With such conveniences available for the rural communities the young people will again be tempted to remain on the farm and take up with farm life as a permanent calling. Such conveniences as this may not be the deciding factor entirely in causing young men and young women to remain on the farms and to attract town dwellers to the rural communities, but they are indeed a very powerful factor. Electric light and electric power, together with the convenience of the automobile, are other telling factors. But these latter considerations would not in themselves be sufficient if the modern convenience of water systems were omitted. Hardwaremen who recognize this fact can take advantage of the situation and press for trade with the farming community with excellent chance for success. One of the reasons for the falling production on the farm has been the lack of the right kind of help. The young men and the young women have been lured away by reason of the attractions of the city and their places have been taken by less efficient farm help. This has resulted in a less efficient class being left on the farms and the production has naturally declined.

Advisable to Get Good System

There are of course water systems and water systems, the same as there are different grades and qualities in almost every other line or commodity. Some trouble has been caused through poor installation of sytems and the systems in certain cases have been faulty in construction in the first place. It remains for the hardwareman to make sure that he selects the best system possible. Some concerns stand behind their goods with the guarantee that each and every part entering into the system are the very best. They furthermore guarantee them to work perfectly and perform the service for which they are recommended. For this reason it should be a prime care of the hardwareman who intends to embark on the handling of these goods to secure a system that is properly built. It is not well to choose a system because it happens to be two or three dollars lower in price than the one which it is felt sure will give good satisfaction. Such a difference in cost is usually taken out of the system. For instance, it would be very easy to put a lighter material in the tank which lighter material would not give the wear of heavier material. The thinner steel would in all probability rust and pit through in a comparatively short time, while the tank costing a trifle more would perhaps give service for a lifetime.

Easy to Install

Some hardwaremen might be at a loss to know whether it is a difficult matter to have these systems installed, provided they were to start dealing in them. One manufacturer is authority for the statement that with a system which is already assembled and tested prior to being shipped that it is a very simple matter to instal the tank, motor, switch or engine, if gasoline motive power is used. All the tools really needed to install such a system that has previously been assembled is a pipe wrench. If the instructions sent by the manufacturers are followed there should be no difficulty in erecting the system to operate without the least trouble.

One of the effectual methods of getting after this trade is to instal a tank on the floor of the hardware store or in some other conspicuous place where the farmer will be able to see how it operates. There is no better advertisement for such a system than to have it in view so that its workings are plainly visible. Those living in rural communities delight above all things to have an opportunity to size up an article. Whether it be the purchase of a shovel or a fork, or any other article, they like to have the chance to see how it "handles." When they have tried it out and secured the one that fits they are much easier to sell. The same principle holds true in the salesmanship of water systems and tanks. If the would-be purchaser can see for himself the certainty with which it operates and the pressure secured to force the water, a long stride has been made toward making a sale. The tank equipped with the automatic electric switch and electric motor makes a very fine demonstration. When water is run off the tank the pressure is lowered and when it reaches a certain point the switch is thrown on. This starts the motor to operate and water is then pumped into the tank until it reaches the required pressure, at which point the switch is thrown off and current disconnected, thereby stopping the motor.

Farmers Not the Only Prospects

Farmers are not the only class who would be interested in this proposition of a water system for their homes. There are many dwellers in the small towns who would be glad to know they could get such a convenient arrangement to supply water to their homes. Doctors, storekeepers, manufacturers and even workers in a town or village would be interested in seeing the operation of such a system. If the local hardwareman has a tank in operation they will be able to see it as well as the dwellers in the rural communities.

Would Increase Sale of Other Lines

When people become interested in a water system to the extent of being ready to buy they are promising candidates for sales in other commodities such as bath tubs, kitchen sinks, septic tanks, toilets, wash basins, bathroom fixtures. Once it becomes apparent to the prospective customer that all these conveniences can be installed in his home he immediately becomes a much better sales prospect. The hardwareman should endeavor to point out through his advertising either in the local newspaper or in his store demonstrations that these articles have become a real necessity in the modern home. The convenience feature is the one big appeal that can be made. The hardwareman who takes up the sale of this line will find that there is a big field to develop and that the returns will mean good profits.

War's Cost.

Hardware Logical Place for Wallpaper

Many Hardwaremen Are Finding This a Profitable Line—Helps Sales of Paints and Brushes—Clean and Convenient to Handle—Some Suggestions Outlined as to Best Methods of Display

THE hardware dealer with his sense of vigilance kept fresh and who is alert to the advantages of changing conditions is always ready to consider departments that can be shown profitable. And it is in these times, when one knows less from day to day what will be possible next month or even next week, that timely suggestions must be considered. In checking over the possibilities of carrying a stock of wall paper in the hardware store, HARDWARE AND METAL was impressed with the enthusiasm possessed for this line on the part of dealers who have been carrying it for several years. In nearly every instance it was established that this department had become so well established that it would in no wise be discontinued.

The Advantages of Wallpaper

"We have added wallpaper since the war broke out to make up for the decreased business that was sure to result from curtailed building operations," said C. Leger of La Croix & Leger, Limited, Mount Royal Avenue, Montreal, to a representative of HARDWARE AND METAL recently. "And one of the best features of this newly-added line is that we find its sale larger each year."

The hardware store is the place that is invariably thought of when one wants a brush. There may be stores elsewhere carrying two or three sizes of brushes but in the hardware store to-day a large assortment can be seen and a better selection made. This applies to even the smaller stores in which the writer has seen large and well chosen stocks. These are carefully kept and the hardware merchant is in a good position to select the brushes that will best suit the needs of painting and of kalsomining and paperhanging.

Therefore the average customer comes to the hardware store for brushes. In many instances this will be a woman. She is the logical buyer of anything that is to be used in the decoration of her house and can be appealed to much more readily regarding such a line as wallpaper than would be possible, for instance, with her husband. And it must always be remembered, that while the desire of the modern hardwareman will be to sell paint suited to the needs of the house inside and outside, he will find a great many that must have wallpaper and will have it from such sources as it can be obtained. Why should the hardwareman not sell it himself?

The sale of wallpaper, paint and brushes are interdependent and they are certainly so closely allied that little argument can be maintained against stocking of the first-mentioned.

The Amount Involved

One's stock will have to be governed by the extent of his trade or by the territory he can serve. In this respect it is difficult to even make suggestions.

In speaking recently with Alfred Goyette of 124 Mount Royal Avenue, Montreal, Mr. Goyette stated that he carried 267 patterns. This is a large variety indeed, but the trade that Mr. Goyette has been able to create and maintain for wallpaper is the best evidence possible that it pays to carry a large assortment.

"I have had customers from all over the city and from several of the outlying suburbs," continued Mr. Goyette, "and this I attribute to the fact that I have the stock and can supply the desired patterns that may be wanted. These I have at all prices and in all grades at from five cents per single roll to a dollar and a half. As a matter of fact I believe that two-thirds of my customers are from outside my own district."

The Goyette Stock

Mr. Goyette has taken hold of the wallpaper business in a thorough manner and to his credit he has a large and well-kept stock. One of the most noticeable features here was that of neatness and order and the facility of treating with a customer and showing the various patterns. This is arranged through the adoption of the "easel" system and the only feature that has been found awkward here is that of careless prospects tearing the samples as they are leafed over.

But the real advantage of the display is carried out through the adoption of the "panel" idea. A frame holds a large section of the heavy wall board that is used so extensively these days and this panel is about 30 inches wide and 54 inches high. On this is pasted in the regular way the sample that one desires to show and this is furnished with the corresponding border.

Two sizes of these panels have been used here but Mr. Goyette states that the larger one as just described is much better and repays for the room it occupies—a space about 3 feet by 8 feet. Because of the larger surface it is possible for the purchaser to get a more effective impression of what the wall will look like when the paper is applied.

How Panels Are Arranged

The fixture holding these panels sits on the floor and is made of tubular iron. This is usually of copperized finish. Having a "T" base at each end the equilibrium of the set of panels is always maintained as these are turned backward and forward in showing the various patterns. Of course both sides of the panel are used to show a pattern of paper, together with the border.

When not in use the panel rack takes up very little room, as the panels work on a free end, being attached to the connecting bars of the fixture at the extreme back corners so that they can be swung back against each other.

In addition to the regular stock of papers and borders, Mr. Goyette carries an extra stock of borders—these being asked for from time to time for special work where paper is not used.

Watch Stock Carefully

It is very essential that stock be checked up carefully so that too many lines are not allowed to accumulate which have become unsaleable or slow. In watching the trend of the many buyers that come in for paper one can keep stock moving and prevent the greater accumulation of these lines that are slow. If necessary they may be disposed of at a price.

Then there is the care of stock. In handling wallpaper this is very necessary. A wall space is essential as the patterns must have their individual sections and these have to be numbered to correspond with the patterns displayed on the panels above referred to.

In the Goyette store one whole side of the store is used and the sections have been carfully divisioned and extend from the floor to the ceiling. The space occupied is 12 feet high and 60 feet long.

The provision for stocking papers is simple. Racks are made of wood strips and these are about three inches wide or even narrower, and ¾ inches thick. The idea is to make sections of suitable dimensions to take care of the number of individual patterns that one wishes to carry and to handle the number of

rolls of each that are needed. They are made just wide enough to accommodate the width of the roll, with perhaps two inches to spare. This gives the stock a neat appearance.

What Are Sellers?

"What patterns sell best?" was asked of Mr. Goyette. "Well, there is a call for all kinds but speaking generally I would say that the largest call for papers from my trade is for the less expensive patterns, up to 12½c or 15c per roll."

The hardwareman who contemplates the purchase of a stock of paper will naturally have to weigh the circumstances surrounding his own business and the probabilities of the extent of territory he can hope to cover.

In another store visited HARDWARE AND METAL found that 150 patterns were being shown and the manager of the store said: "I think that the hardware store is the real place for this line. It works in well with brushes and paint."

Window Displays, etc

The Goyette store has a large frontage. This is made use of in the best possible manner and the window displays are kept as fresh and attractive as weather conditions will permit.

The east window is used for the display of papers and has been found effective in drawing trade. At certain seasons of the year the wallpaper department of the store is one of the busiest and is so located as to give the housewife an opportunity of selecting her patterns with the minimum of delay. There is very little possibility of detraction and this is an important consideration.

Suggestions Can Be Made

If the dealer be wide awake to his opportunity many sales of other requisites can be effected. Paste is needed to apply the paper with. In the Goyette store this is carried in barrels, ready prepared for immediate use. And then there are glues for sizing purposes and the many styles of brushes that are required. The same may be carried out in paints, enamels, varnish remover and a dozen kindred commodities.

Pig Iron and Scrap Steel Reduced $1

President Wilson Orders Retention of Other Prices on Ore, Coke, Steel and Steel Products Recommended Previously and in Effect up to April 1

Prices on ore, coke, steel and steel products, recommended previously by the price-fixing committee of the War Industrial Board, subject to revision on April 1, were ordered by President Wilson to be continued in effect until July 1, according to a dispatch from Washington on Tuesday of this week.

From April 1 to July 1, however, the maximum price of basic pig iron was ordered reduced from $33 to $32 per gross ton, and of scrap steel from $30 to $29 per gross ton.

It is provided that new contracts calling for delivery of these products on or after July 1 are not to specify a price, except with the understanding that it is subject to revision by any authorized Government agency.

The announcement was made after approval by the President of a recommendation made to him by the price-fixing committee and all manufacturers and producers are expected to observe the maximum prices.

Action Foreshadowed

It has been regarded as practically settled, stated the New York Metal Market, that there would be no general scaling down, and it is thought that upon due consideration it will be held inadvisable to attempt any readjustments. After all, the majority opinion is that the prices are about as well related to each other, in the general structure, as could be expected. The chief uncertainty was as to the period of time for which the prices would be made. The producers were anxious that the extension be to the end of the year. It is pointed out that the fixing of prices for three months at a time thus far has represented simply a convenience in the particular circumstances existing, and did not represent the adoption of a settled policy.

Coal Now Plentiful

Opinion is divided as to whether buyers have been holding off from making purchases on account of the price issue pending, but in the highest quarters the opinion expressed is that buyers have not been disposed to wait on this account, as they are protected against reductions in any event. The market is quiet, generally speaking, because buyers already have a great deal of material due them. There is heavy inquiry for a few lines, including oil country goods, small spikes and a few specialties.

Shell discard steel has had a sharp advance to $2 to $3 a ton in the past few days and is now bringing substantially the full billet prices, and usually with carbon extras in addition. There is slightly better demand, while offerings have decreased.

Coal is now almost plentiful, and coke supplies are increasing steadily. A moderate amount of foundry coke can now be picked up in the open market.

WASHINGTON, March 23rd.—Price fixing and ships are the subjects consuming the chief interest in Washington at the present time. Industrial leaders are interested in reported movements to further fix prices and claim that unless definite action is taken shortly business will become so unsettled as to be disorganized.

With the German drive under way America is confronted with the problem of ships, for it is admitted that the part the United States can play in repelling the present drive and in further drives depends entirely upon the amount of tonnage which can be made available.

There is more optimism over the shipping problem to-day than there has been for some weeks. This is partially occasioned by the fact that the taking over of Dutch vessels in American ports has given sufficient shipping space to clear docks and warehouses of large amounts of supplies which have been held for weeks awaiting transportation to European points.

A Better Showing

Moreover there is a decided indication of speeding up in the shipbuilding work. Several vessels launched on the Atlantic coast this week have given definite promise that the shipbuilding program of the United States is going forward despite pessimistic predictions of failure. Investigations conducted by the Senate Commerce Committee have acted as a prod and shipbuilders and shipworkers have both turned to with a better spirit and as a result work is going forward with more impetus than at any time since the great program was undertaken.

The labor questions have been ironed out. The Shipping Board has announced that a satisfactory wage scale for Atlantic coast shipbuilders has been reached and this removes a very dangerous obstacle in the path of the shipbuilding program.

Pacific coast shipbuilders have assured the Government that they will surpass their program. Present estimates of the capacity of finished ships from the Pacific coast ports for the year 1918 are 65 steel vessels with a tonnage of 554,900 and 18 wooden vessels with a tonnage of 622,000.

Japan is also reported to have made an attempt to reopen negotiations whereby a considerable portion of the Japanese tonnage in the Pacific would be diverted to the use of the United States and the Allies in the Atlantic. This plan was taken up last summer at the time when the Japanese mission was in this country, but no agreement was reached. Japan, however, is reported to be in need of larger steel supplies to carry on her war program and as a result she is willing to release some of her vessels to the United States in return for a greater supply of steel.

Chairman Hurley has announced that several experiments are being tried now which will test the possibility of furthering the shipping of the United States. He announces that contracts have been let for three vessels of a tonnage of 15,500. These are the largest vessels yet undertaken by the United States Shipping Board and if they prove successful more contracts of this nature will also be let. The Shipping Board has also widened the scope of its efforts to defeat the U-boat by attempting to secure a non-sinkable vessel. At the present time tests are being made of a vessel of this description, invented by Hudson Maxim, inventor of the Maxim silencer for guns.

EDITORIAL COMMENT

MAKE THE HENS DO THEIR SHARE

ENCOURAGEMENT of the sale of incubators by hardwaremen will materially help to increase the food supply. If any abundance of poultry is raised this spring and summer it should mean that all the greater supplies of beef and bacon will be available for the troops and the needy abroad. We at home should be able to get along on chicken dinners—especially if the cost is within the length of our cable-tow.

An abundance of spring chickens raised in incubators would add greatly to the meat supply. This is not a time when hardwaremen who have excellent means at their disposal for encouraging production should sit back and wait for interested purchasers to come to them and inquire if they have certain articles.

Hardware merchants can be leaders in helping the production movement. How many lines do you have in your store that will assist in this necessary increase in food products? You should consider it your duty to your country and to yourself to carry on an aggressive sales campaign in order to get those articles to work.

STEEL PRICES TO HOLD

AT the time of writing nothing official has been given out anent the new schedule on steel prices in the United States. On March 21 as a result of the deliberations between representatives of the steel trade and the price-fixing committee of the War Industries Board there was a virtual agreement as to the prices that should prevail for several months starting from April 1.

The new schedules have been passed along to the President for his approval before announcement is made. It is understood that there will be no material modification in the current prices. Furthermore, it is asserted the steel men obtained some important concessions from the Government on certain points which will necessitate some readjustments, and the intimation is made that higher prices may result in some instances.

The smaller manufacturers of iron and steel have made a vigorous claim for higher prices. They asserted they could not carry along their business in a good many instances unless higher prices were made. They contended that in the interest of production they should be given a margin of profit sufficient to induce them to continue in the business.

The large steel corporations of the country have the advantage over the smaller concerns in that they have their own sources of supply of raw materials, whereas the small mill must enter the market and buy at whatever price and wherever he can get it. Recently he has had to pay much higher prices for the raw materials than the cost to his big competitor.

GET OUT THE SEEDS

HARDWAREMEN can help along the production plan by getting their stocks of seeds prominently before the people of their town. There is nothing like a case of seeds in full view to start the gardener thinking of his garden plot. Seed packages with their brightly colored pictures of the vegetables have a way of luring the unsuspecting ones into buying.

Window displays, counter displays, special display tables, actual plants in process of growth placed in the window—all these are excellent ways of getting the seeds before the people. Some catchy cards drawing attention to the necessity of getting seeds in hand preparatory to planting will help along this movement.

Any aggressive business methods which the hardwareman can put forth will do a good service in the interest of a larger food supply. Incidentally it will be good business on his part to get the seeds started. When the seeds are purchased garden tools will also be needed. When the incentive is of such a powerful twofold nature what hardwareman will hold back?

DAYLIGHT SAVING ON THE WAY

GOOD news came from Ottawa during the week to the effect that the Daylight Saving Bill had been practically passed. The only detail that has been left in abeyance is the time when it shall become operative.

There is one thing in favor of a short announcement, namely, that it will take up very few seconds to make the change through Canada once the announcement is made that it is to become effective. Thanks to the efficiency of the press as a publicity means it can be flashed across the Dominion within a very short space of time. It seems highly probable that hardwaremen will have the best opportunity they have ever had to talk garden tools and other instruments and equipment that will help along production.

Current Events in Photograph—No. 13

TRAFALGAR SQUARE, LONDON, IN WAR TIME

THOSE who have visited London, England, will hardly recognize Trafalgar Square. The bronze lions are almost the only familiar object. This was how the Square looked on the occasion of the campaign to raise £100,000,000. In the foreground is the giant Italian aeroplane which made the record flight from Turin, Italy, to London.

MAY LIMIT USE OF AUTOS

Some regulation to provide for Government control of the importation of automobiles into Canada may, it is said, be promulgated in the near future, according to a dispatch from Ottawa during the week. It was, however, stated to-night that the Government had not decided to prohibit such importation entirely. Manufacturers of motor vehicles and the selling agents of companies in the United States have of late had conferences with the Canadian War Trade Board on the subject of the control of importations. They will, it is announced, interview that board again to-morrow.

Cut of 30 Per Cent. in U. S.

Production of pleasure automobiles will be cut 30 per cent. during the present fiscal year as a war measure, according to a decision reached by the National Automobile Chamber of Commerce of the United States, at a recent meeting in New York. The reduction applies to the entire uncompleted schedule for the year.

Full details concerning the action of the Chamber of Commerce were not made public, but in a statement issued regarding the decision to curtail production, it was said that representatives of some of the largest manufacturing concerns were summoned to Washington recently by the War Industries Board and the Fuel Administration to discuss the situation.

"The arrangements for a curtailment of production," the statement continues, "are entirely satisfactory to the War Industries Board, the Fuel Administration and the manufacturers themselves, permitting the latter to adjust their affairs to meet the Government's program without unnecessary business and financial disturbance."

COST OF CAR UPKEEP

Automobile owners will be interested in the figures contained in the offer made by Charles R. Pepper, Duke Street, Toronto, to supply the city for the various departments with a Ford car service for $900 per year per car, the service to include gasoline, tires and the cost of the general upkeep, the cars to be run five hours per day, without a driver, and not to be run at night or on Sundays. The estimated time would be 300 days a year.

In sending on the figures, Property Commissioner Chisholm points out that it costs the city about $825 per year to operate a Ford car. This is made up as follows: Gasoline, $250; tubes and tires, $150; general repairs, $150; proportion of rental of garage, $100; depreciation, $175.

CANADA TO HAVE SHIP PLATE MILLS

Canada is arranging to manufacture her own supply of plates for steel shipbuilding, according to a despatch from Ottawa. The Government has just completed arrangements with the Dominion Iron & Steel Company of Sydney to begin immediate construction of a steel plate rolling plant with an output of 150,000 tons per year, or sufficient for the national shipbuilding requirements for some years to come. The cost of a new plant will be from three to five million dollars. It is expected to be in operation by the autumn of next year. The Government is giving no direct financial aid to the company, but is guaranteeing sufficient government orders to insure a return on the investment.

TO ERECT OIL STORAGE STATION

The Imperial Oil Company have been granted a permit to erect, at an estimated cost of $104,200, a bulk storage station for petroleum products, on the south side of Keating street, Toronto.

Auto and Accessory Dealers to Hold Convention

Ontario Dealers Are to Get Together in Preliminary Meeting On April 1, 2 and 3—To Consider Subjects That Will Mean Better Business Methods

THE first convention of the Ontario automobile and accessory dealers has been called to take place in Toronto on Monday, Tuesday and Wednesday, April 1, 2 and 3. The opening meeting will commence on Tuesday morning at 10 o'clock, when those attending will be welcomed by his worship Mayor T. L. Church and the president of the Ontario Provincial Board, B. W. Ziemann of Preston, Ont. The convention is to be held in the assembly hall of the Retail Merchants' Association of Canada, 2 College Street. Quite an extensive programme has been arranged, with some speakers provided who are authorities on particular lines connected with the automobile and accessory business. One of the matters that will most likely come up for discussion and action is the legislation which there is a possibility of being introduced at the present session of the Dominion Parliament and which is considered injurious to many branches of the trade. The third day has been set aside for joint consideration between manufacturers, wholesalers and retailers of matters which have a vital bearing on the industry. It is hoped this convention will mark the beginning of better conditions in the automobile trade. There are in the neighborhood of one thousand dealers, retailers and manufacturers in Ontario and it is expected there will be a good attendance. A comprehensive programme has been prepared as follows:

MONDAY

10.00 a.m. Registration of Delegates.
2.00 p.m.—Meeting Reception Committee.
3.00 p.m.—Nomination of Committee.
4.00 p.m.—Committee meetings convene. Evening open for entertainment.

TUESDAY

9.30 a.m.—Registration of Delegates.
10.15 a.m. Official welcome and reception. Mayor T. L. Church, Controller C. A. Maguire, Controller John O'Neill, Alderman Geo. Ramsden, B. W. Ziemann, Esq., president, Ontario Provincial Board Retail Merchants' Association. And trade representatives.
10.45 a.m. Opening Session.
Chairman's Address.
Address, B. W. Ziemann, Esq., president R.M.A.
Address, W. C. Miller, Esq., secretary R.M.A.
11.15 a.m.—Receiving Resolutions.
"15 Minute Talks by the following speakers:—
"Organization—W. M. Gladdish, Esq., editor Motor World.
"Times—Past, Present and Future"—A. A. Briggs, Esq., advertising manager, Dunlop Tire Co.
J. F. Shatford, Esq., Imperial Oil Co.
12.00 noon —Adjournment.
2.00 p.m.—Consideration of Resolutions.
3.00 p.m. —"15 Minute Talks" by the following speakers:—
"Automobile Insurance"—John E. Gossett, Esq., Travellers Insurance Co.
"Present Day Problems"—F. W. Evans, Esq, Canadian Fairbanks-Morse Co.
"Coal Oil Equipment" John A. Yarker, Esq., secretary-treasurer, Kero Coal Oil Carburetor Co.
"Tires"—Wm. Allan, Esq., manager, Marathon Tire & Rubber Co.
4.00 p.m.—Consideration of Resolution.—Continued.
4.30 p.m. "15 Minute Talks" by the following speakers:—
Donald Johnston, Stewart Products, Ltd.
H. C. Lower, general sales manager, Goodyear Tire & Rubber Co., of Canada.
Mr. Edgar, Canadian General Electric Co.
John Millen & Sons, Limited.
5.30 p.m. Adjournment.
Evening open for entertainment.

WEDNESDAY

9.00 a.m.—General Session—Business resumed.
Opening of "Question Box" and discussion thereon.
9.45 a.m. -Election of Officers—Installation.
10.00 a.m. Address, John C. Kirkwood, Esq., business counsel "Ascertaining and Recovering the Cost of Doing Business," "Making a Net Profit of Thousands Per Year," "Salary for the Boss," "Selling Enough, or the Matter of Turnover." Queries and discussion on the above subjects.
11.15 a.m. Address, Hon. F. G. McDiarmid, Minister Public Works and Highways.
11.45 a.m. "15 Minute Talks" by the following speakers:—
Hyslop Bros., Ltd.
"Advantages and Disadvantages of a Non-Skid Tire," Mr. Stanyon, president, K & S Tire Co.
12.15 p.m.—Adjournment.
2.00 p.m.—General Business Resumed.
Conference with automobile and accessory manufacturers and wholesale jobbers.'
3.00 p.m.—Address: "That Second-hand Car."
4.00 p.m. Reports of Committees.
4.30 p.m. "15 Minute Talks" on the following subjects:
"Salesmanship."
"Service."
"Credits."
"Advertising."
5.30 p.m.—Resumption of General Business until completed.

Puts Business on Cash Basis

T. A. Squire, of Brantford, Makes Important Change With the New Year—Telling His Customers Why

IT takes courage to pass the dead-line, to make the first break, to put one's business on the cash basis. Particularly is this the case with a store which has built up a good line of credit business, a line where the percentage of good payers is large, where the business carried is of considerable volume.

T. A. Squire in Brantford is one of the hardwaremen to break away from the ranks of the credit stores — the stores where a good customer is taken care of until the month is up, though every effort is made at all times to secure cash business. T. A. Squire has been in the hardware business for ten years. When, after thoroughly going over the situation, he decided to break from credit to cash, he took the public into his confidence in an advertisement which did not lack for individuality, however much the phrasing may be out of the ordinary.

It has been the custom of Mr. Squire to run a 3-column ad in the local papers on Fridays, giving special Saturday bargains. Recently one column of the ad was given over to the announcemnt, that he has made the break for cash sales as against credit. The announcement which was headed "Important Notice," with a sub-head "We Are Going to Sell Merchandise for Cash," follows:

This is a plain statement and we mean every word of it. The reasons are too many to enumerate, but just a few will suffice. We started in business about ten years ago, with little capital, little credit, and an abundance of good honorable intentions. We have lived, still have a little capital (principally book accounts, inactive), but as time goes on, age creeps upon us, we find our nerve is not what it should be. However, we still have our initial and most valuable asset—honorable intentions. We have confidence in people, we trust them with our capital to the limit but to go further would be to trust them with our honor, and that we will not do, because if a man gets in a condition he cannot pay us, the result to us is as bad as if he would not pay, so our honor is too sacred and valuable an asset to be peddled about. Hence we have reached the limit in this credit business, so there is just one thing left for us to do and that is—sell for cash. You are going to pay some time. Why not now? You can buy for less if you pay cash. Hereafter cash prices will prevail on everything in this store. Try the cash plan. Keep out of debt. Save money, and be happy. We believe the cash plan is as nearly necessary to the happiness and welfare of the people as the Christian religion.

USE OF MOTORCYCLES IN WAR

From the arrival of the British Expeditionary Force in Belgium in the late summer of 1914 down to the present time, the motorcycle has steadily gained in importance in different branches of the military service. Its use has not been restricted to the allied armies. The best authorities place the number of motorcycles employed by the armies of the central powers at the time of the Battle of the Marne at 18,000. The British had at least 40,000 in service in the spring of 1915, while the French had about 11,000. The Italian forces, up to the present, have 10,000, according to recent estimates.

It has been figured that more than 750,000 motorcycles have been in use for military purposes by the belligerent powers since July, 1914. This does not include those at present in the United States Army services, for prior to our entrance in the great war the American army did not have more than perhaps 150 machines in all.

Profit in Catering to the Golfer

Spread of Golf Spells Profit to Merchant—Municipal Links Are Becoming More Popular Each Year—Game Fascinating and Popular — Fitting Out the Beginner—Golf Accessories Also Hold Possibilities For Trade

THERE is one branch of the sporting goods line of trade which offers an opportunity for considerable profit and which should not be lost sight of by the wideawake hardwareman, that is the sale of golf clubs and accessories. Golf is becoming very general all over Canada and although at present, perhaps, it is more or less confined to the more wealthy class, it is rapidly losing this limitation and is fast becoming a game of the people. In many cities in Canada municipal golf links are now established where it is possible to play round the course for the modest sum of 25c or even less, and this brings the game well within reach of even the most modest pocket.

Interest the Municipal Authorities

In some cities the municipal authorities have not yet recognized the added attraction a city gains by the possession of a public golf course. In such cases it is safe to say that the city fathers themselves are not acquainted with the game. They belong to that still numerous class who "cannot understand what anybody can see in knocking a ball about from one spot to another."

Fascination Follows First Game of Golf

It is a somewhat extraordinary thing that among those who have never played the game you will rarely come across anyone who will plead guilty to seeing that there can possibly be any attraction in golf. And yet among those who have played it you will rarely find one who has not succumbed to the fascination of the game. The writer has known many men who have been experts in other branches of sport to take up golf and adopt it to the exclusion of their former and every other game, but he has never yet come across one man who having played golf, that is to say, having played it so as to have a fair knowledge of the game, has ever given it up and gone back to any other form of amusement.

Golf Growing in Popularity

There undoubtedly is a fascination about the game which can only be understood by those who have experienced it and this added to our knowledge of the hold it has already taken upon the general public both in Great Britain and the United States leaves us no room for doubt but that it is destined to play a prominent part in the future in the public games of Canada.

This being so, the hardwareman who wishes to keep abreast of the times should be watchful for any signs of the game becoming popular in his own particular district and on the principle of "first come, first served," he should not leave it to his competitors to get ahead of him but should lose no time in making himself acquainted with the various items which go to make up the stock in trade of the successful caterer to the golf enthusiast.

Careful Study of Game Means Results

Let it here be said that the trade in golf accessories is not a simple one, it involves the necessity for some knowledge of the game on the part of either the hardwareman or of one of his clerks, and to keep an adequate stock of clubs involves some little outlay, but the profits to be obtained make the fulfilment of these conditions well worth while.

It will not suffice to order half a dozen or a dozen clubs of the different varieties and a dozen or so balls and place them in the window and expect in that way to work up a trade. As men vary in height so do the clubs they require vary, and a complete stock must therefore include clubs of each variety suited to every size man from the diminutive five footer to the giant of over six feet.

Be a Member of the Local Club

But let us get away from generalities as to what cannot be done and arrive at some definite conclusions as to what it is necessary to do to successfully engage in the business.

First of all either the hardwareman himself or one of his clerks must join the local golf club, and gain some knowledge of the game. A very short time will suffice to make him acquainted with the uses of the various clubs and from the personal experience he will gain of those suited to his own use he will be able to advise others.

Make Use of Professional If Available

Where a professional is engaged by the club an advantageous arrangement is sometimes made by which he agrees to spend his spare time in the store and is allowed a substantial commission on all goods he sells. As at some time or other most of the members receive some tuition at his hands and look to him for advice as to suitable clubs, an arrangement of this kind is very satisfactory to all parties.

Fitting Out the Beginner

It is supposed then that either such an arrangement has been made with the club professional or that the sporting goods clerk has acquired a fair knowledge of the game; it is now necessary to consider what stock is required. Assuming you are catering for the beginner he will require at first five clubs, viz., driver, brassie, cleek, mashie and putter. Later on as he progresses he will want a niblick and probably a jigger or other fancy iron clubs but for the present the above mentioned five will suffice. The beginner who is desirous of limiting his initial expense could even dispense with the driver and mashie at the start. Three each then of three different sizes of clubs as before mentioned will probably suffice as a start. It may be mentioned for the benefit of the uninitiated that a club cannot be cut down to suit a shorter person than one for whom it was intended as by so doing the balance would be destroyed. The merchant, however, who has a stock of three of each, medium lengths, would probably be able to satisfy his first few customers and in the event of one of them being very short or very tall he would have a reasonable excuse for asking him to wait a day or two till he could send for clubs of suitable length.

Then in addition to his stock of clubs the merchant will require a supply of balls, bags, rubber tees, gloves and the many other conveniences of various kinds which tend to make smooth the way of the golfer. A repair department, too, may be made a source of no small profit. The enthusiast of the "royal" game will as a rule not think of expense if he can save from the discard a club to which he has grown accustomed, and the business of repairing clubs and repainting balls soon becomes well worth while. As he gains further acquaintance from experience of the requirement of his customers he will be able to increase his stock to the advantage of his trade and having regard to the substantial profits obtainable on the various items and to the way the golf habit spreads once it takes hold of a community he will have no cause to regret having been the first to go for the business in prospect.

TO OBSERVE "BICYCLE WEEK"

All manufacturers, jobbers and retailers of bicycles in the Dominion will observe the "Third Annual Bicycle Week" from May 4 to 11, inclusive, and many preparations are being made by the trade to present the bicycle to the people of the country literally.

The bicycle week idea originated in Canada, but this year the trade celebration will be staged on the above dates all over the United States as well as in Canada. The main features of bicycle week consist of co-operative newspaper advertising, window displays, decorated stores, bicycle parades, races, poster displays, slides in moving picture theatres, stunts, and other factors which tend to create enthusiasm and interest.

EVENTS IN THE TRADE

BUSINESS CHANGES

Enchant, Alta.—M. Hill, hardware, has sold out.

Sceptre, Sask.—Shields Bros., hardware, have sold to F. Newby.

Ottawa, Ont.—Star Hardware Company is discontinuing business on May 1.

Montreal, Que.—H. Coutlee & Fils, hardware, paints, etc., have dissolved partnership.

Tompkins, Sask.—Mrs J. Bradley, hardware, has been succeeded by Mrs. M. McDonald.

PERSONAL

Lionel Lumb, chief accountant, Canada Foundries and Forgings, Ltd., head office Brockville, Ont., spent a few days of the past week visiting the Winnipeg branch, being operated under the name of the James Smart Manufacturing Co., Ltd., with W. P. Millar as manager. Winnipeg branch is now taking care of the business of Canada Foundries & Forgings Ltd., from the head of the Great Lakes to the Pacific coast.

INDUSTRIAL NOTES

The Town Council of Lindsay has authorized a committee of its number to proceed with securing plans for the installing of a sewage disposal system in that town.

MONTREAL NEWS NOTES

R. P. Dickson, of the Sumner Company, Moncton, N.B., was a visitor to Montreal this week.

Mr. Huston, of the Peterborough Lock Manufacturing Company, was a caller on the Montreal trade this week.

Paul L. Rinck, with Stevens & Co., accessory distributors, Broadway, New York, was in Montreal this week calling on the trade.

Mr. Rose, representing the Carborundum Company of Niagara Falls, N.Y., was a visitor to Montreal in the interests of his firm.

Chester W. Boynton, representing the Motor Car Equipment Company of New York has been calling on the Montreal trade the past week.

G. W. Angerine, with the Turner & Seymour Manufacturing Company, of Torrington, Conn., upholstery manufacturers, called on the Montreal trade the past week.

Fire and water gutted an automobile repair shop at 322 Craig Street West on Tuesday morning last. Considerable damage was done before the blaze was under control.

H. C. Martin, of the firm of Martin, Finlayson & Mather, Ltd., hardware merchants, of Vancouver, B.C., was a Montreal visitor this week, and spent his time here combining business with pleasure.

The Gladstone Brush Manufacturing Company, Ltd., were represented in Montreal this week by T. A. Marshall. E. T. Ramsay, with headquarters in the New Birk Building, has been appointed to look after their Montreal interests.

The Jas. Walker Hardware Company, Ltd., Montreal, have a moving display in their window, showing the manner in which graphite is used in the differential

The Second Great Spring Drive

and other working parts of the modern automobile. It is naturally quite an attraction. The Walker Company is also making alterations, which will increase the space in their accessory department very materially.

FIRE EXPLODES CARTRIDGES

A dispatch from St. John, N.B., on Tuesday of this week stated that the upper portion of the large hardware store of W. M. Thorne and Company took fire this morning. Many cartridges were in stock, and when they exploded it sounded like a miniature battle. Senator Thorne is head of the business.

The fire broke out about noon and an hour and a half later appeared to be under control. There was a great explosion at the outset, followed by several smaller ones while the cartridges exploded for about an hour. The cause of the fire is unknown.

NEW BRUNSWICK NEWS NOTES

The Maritime Art Glass Works, Ltd., of St. John, may remove to Halifax, owing to the exceptional conditions existing there as a result of the explosion disaster.

Committees representing the master plumbers and journeymen of St. John are now meeting in an effort to settle the strike which has been in progress since last May.

Members of the New Brunswick Provincial Victory Loan Committee have presented to Senator Thorne of W. H. Thorne & Co. Ltd., a handsome silver cigar box in appreciation of his services as chairman of the committee.

Plans for steel shipbuilding in St. John, of which mention has been made in these columns, have at last matured and the St. John Shipbuilding Co., Ltd., is preparing to proceed with the erection of modern facilities. Frank D. Chase, an engineer who has laid out several of the largest new yards in the United States, has arrived in St. John to take charge of the work. The plans call for yards capable of accommodating three or four steamers at the same time.

The wholesale and retail merchants of New Brunswick are nearing an agreement regarding the provisions of the bulk sales bill which will be introduced at this session of the provincial legislature if the final details can be agreed upon.

Howard P. Robinson, Richard Sullivan and Thomas Bell have been incorporated as the Thompson Machinery Co., Ltd., with capital stock of $49,000 to carry on the business of the Thompson foundry and machine shops at Grand Bay, near St. John.

A bill of great interest to practically all employers, especially those in manufacturing lines, has been introduced in the New Brunswick legislature to provide for a new workmen's Compensation Act. In order to protect all workmen the bill makes insurance compulsory and gives a compensation commission power to collect assessment from the employers and carry insurance on behalf of the province if desired. This feature has met with some opposition from employers, although approval is expressed of the formation of a commission to act as an intermediary between employers, liability insurance companies and the workmen.

PRESENTATION TO GUY H. SIMPSON

It is not often that a business firm has the pleasure of celebrating such a unique event as that which took place Friday evening, March 22 at Hessel Grove, the residence of Mr. and Mrs. W. H. Wiggs, when the employees, some 50 in number, of the firm of the Mechanics' Supply Co., Limited, Quebec, celebrated the twenty-fifth anniversary of Guy H. Simpson's connection with the firm. After full justice had been done to a splendid menu the host invited those present to drink to the toast of the King, followed by that to Canada "Terre de nos aieux," to which O. A. Paquet eloquently replied and feelingly alluded to the three sons of their patron who were overseas doing their bit in defence of the land all loved so well. Mr. Wiggs then proposed the toast to the guest of the evening, and in doing so alluded to the faithful services that Mr. Simpson, the vice-president and manager of the company, had so conscientiously given him. He also recounted some amusing instances of their early attempts to gain a footing in the business world. He produced some interesting souvenirs, the first price list, showing a comparative fraction of goods as now handled by this firm, mentioning some of the small purchases of plumbing articles bought by the half dozen, where now as many carloads take their place. Mr. Wiggs also alluded to the remarkable growth of their electric business from buying a few yards of wire, electric bells, etc., to the present extensive purchases in that department. He produced some of the old invoices from firms that they are still doing business with, and as Mr. Wiggs has always been a great believer in printers' ink he showed samples of their first advertising matter together with an invoice for same from John J. Foote, proprietor of the "Morning Chronicle."

After Mr. Simpson had feelingly replied to the toast in his honor he recounted some of the early reminiscences of his service as office boy just away from school, and how in answer to an advertisement he had received a letter from Mr. Wiggs asking him to call and report for duty, at the same time producing the very letter he had received, dated February 20, 1893, little dreaming that 25 years after its receipt he would be able to produce it on such a happy occasion as the present. Before resuming his seat he thanked his host and hostess for this unexpected testimonial to him and Mrs. Simpson, who had been also alluded to in the president's remarks.

At this juncture Mr. Wiggs took the opportunity of presenting Mr. Simpson with a souvenir (a gold watch suitably engraved) that he hoped both he and his sons after him would keep as a memento of the occasion. Mr. Walter Wilkinson then proposed a toast to "the firm," telling of his long connection with it, the happy relationship that existed among all the employees and trusted that they would all continue to rally round Mr. Simpson and the other directors at the head of the business. A final toast was proposed by W. C. Teakle, the secretary and treasurer of the firm, with some kind and befitting allusions to the ladies, and especially to those present from the office staff. The happy event broke up after an enthusiastic toast had been drunk to Mr. and Mrs. Wiggs, and the singing of the National anthem.

HARDWARE LETTER BOX

Steel Manufacturers

S. Bourgeois & Cie., St. Hyacinthe, Que.—Would you oblige us by giving the names of Canadian steel manufacturers?

Montreal Rolling Mills, Montreal; London Rolling Mills, London, Ont.; The Algoma Steel Co., Sault Ste. Marie, Ont.; The Steel Company of Canada, Hamilton, Ont.; Nova Scotia Steel & Coal Co., Limited, New Glasgow, N.S.—Ed.

Hose Fixtures

Cameron & Hutt, Verwood, Sask.—Could you put us in touch with dealers in hose fixtures such as racks and hangers to show the different kinds of hose?

Gutta Percha & Rubber Co., Toronto, Ont.; Dunlop Tire & Rubber Co., Toronto, Ont.—Ed.

CATALOGUES and BOOKLETS

Catalogue of Stoves and Ranges

A splendidly illustrated catalogue featuring Hoosier stoves and ranges has been issued by the Hoosier Stove Company, Marion, Ind., U.S. The catalogue No. 31 shows and describes an extensive line of ingot iron, steel and cast ranges, cast cook stoves and heating stoves, wood heaters, etc. Copies of the catalogue with prices, etc., will be supplied upon request.

F. E. Myers & Bro., Ashland, Ohio, have issued spray pump catalogue No. SP18, showing this company's line of spray pumps, including the hand or bucket pumps, also the larger barrel outfits and power spray rigs, together with a line of nozzles, hose and spray accessories. In the back of the catalogue is an article on spraying, together with formulae and spraying chart. Copies of this catalogue, which consists of 64 pages, will be supplied to the trade on request.

Hints to Shavers

The American Hone Co., represented by C. C. Craig Company, Winnipeg, Man., have issued a little 2-page pamphlet for distribution through the retail trade giving hints for the cutlery buyers and hints to shavers. The booklet is very interesting and one that supplies some very important information which should be in the hands of all salesmen. Copies will be supplied upon request.

Dealer Helps for 1918

An exceptionally attractive 42-page booklet in colors has been issued by A. Ramsay & Son Co., Montreal, showing "Dealer Helps for 1918." The booklet shows dealer helps for use by retailers, and also advertising which will appear in Canada's leading papers and magazines. Window displays and posters to help the dealers are also attractively illustrated in the booklet along with advertising prepared with the idea of helping the retailer to make his store more attractive. An exceptionally wide range of dealer helps is shown in this booklet which is gotten up in attractive style and is profusely illustrated. Copies of the booklet will be supplied upon request.

Catalougue on Spark Plugs

The Sharp Spark Plug Company, of Cleveland, O., has issued a very handsome 24-page Catalogue No. 12 of their various lines of spark plugs. The catalogue is finely illustrated and is printed in black and blue on a highly calendered paper. The last two pages are given up to a practical discussion on "Ignition Troubles and Their Causes." The various sizes of spark plugs are also enumerated.

New Era for Motor Requisites

The New Era Spring & Specialty Co., Grand Rapids, Mich., have issued a 20-page catalogue featuring motor accessory lines, including springs, spring bumpers, tire carriers, shock absorbers, sparking points, foot accelerator, and other lines. The booklet is well illustrated and contains information of practical value to the trade dealing in motor accessories. Copy will be supplied free upon request.

The British Empire at War

Cammell. Laird & Co.. Ltd., Sheffield, and Birkenhead, England, has issued a very attractive blotting book which is entitled "The British Empire at War." The front cover carries a fine photograph of Sir Douglas Haig. There are in turn fine illustrations of the British Navy, British troops entering Peronne, a fleet of aeroplanes ready to leave for France, and an interior view of one of the great British shell-filling factories. which covers an area of nine and one-half acres. There is a striking map of the Empire and illustrations showing the comparative size of the army, navy and industrial forces of the Empire in 1914 and at 1917. The book is issued under the sanction of the War Board. Rice Lewis & Son, Toronto, is distributing a number of copies on behalf of Cammell, Laird & Co.

BOILER TUBE SHIPMENTS

Pipe shipments from the plant of the Reading Iron Company are moving more freely, the outbound cargoes including pipes of all sizes, especially tubing for boilers. There is also a more liberal receipt of metal supplies at the various factories, this being notable at the shops of the Reading Railway Company.

THE CLERKS DEPARTMENT

COLONEL HOUSE--A MAN OF MYSTERY

Some Intimate Pages of th Life History of the Little Known Personality Bearing a Well Known Name

SOME men are pitchforked into big jobs. Others do not land in the limelight after a whole lifetime of effort. Occasionally there are some who soft pedal along the path, and the first thing the world knows they are well up toward the top of the heap. Apparently that describes fairly accurately the case of Colonel House. He is prominent because Woodrow Wilson is president of the United States. Were some other man in the presidential chair, Colonel House would probably slide back in the lesser groove, and once more be a plain citizen of Austin, Texas. Edwin Wildman in the "Forum" refers to him as "The Man of Mystery."

Colonel House is a name known the world over, but only a small group of intimates know the man—the man who has just been selected by the President to gather data preparatory to the conference that must come when the world shall lay down arms and take up the discussion of permanent peace—a position of vast potential influence and international power—a position so great that one is appalled at the responsibilities that may fall upon the shoulders of the man who will have the data in his hands to determine responsibility, a segment of which is reflected in the data just issued showing Belgium's property damage at $1,500,000,000—a sum that will have to be met by the destroyers.

Peace is not in sight, but Colonel House is the first man officially designated to prepare the way. He may even be a precursor of that happy day. May we with propriety lift the veil and glance at his personality? It concerns us immensely, vitally and hopefully. To begin with, he is a noiseless mil*lionaire*, *a rara avis* in these days of publicity-seeking, quick-rich egotists. That is a hopeful sign. He has achieved far-reaching political results, noiselessly, for his achievements are in closet, the achievements of alert judgment and calm thought.

There has frequently, in the history of our government, been a man, or mind, behind the "throne." There was Hanna in the days of McKinley, when you had to "see Hanna." There was Wood, when Roosevelt ruled. Wood was his most intimate "chum." You didn't "have to see" Wood, but a word from him was a prized token that reached Roosevelt's ear direct. There was Hay, when Harrison was in power—afterward Consul-General at London, the most valued prize, financially, in the executive gift box. And there was Hornblower in the Cleveland days.

Was Hardly Known Outside of Texas

In 1912 Col. E. M. House of Austin, Texas, was scarcely known outside the Lone Star State. By February, 1913, the name of Colonel House had appeared in practically every newspaper in the country!

"Who is he?" was asked.

"A man from Texas," was the answer.

"Yes, but what has he done?"

"Nothing, except dabble in state politics."

"Ah, a politician. What offices has he held? What office does he hold?"

"He holds no political office, he never has held political office, he says he will never accept any political office—and what he says goes!"

"Well, then," comes the puzzled plaint, "how did he get into print?"

And the only reply was then as it is now, "He is the closest friend of Woodrow Wilson. We believe he is a political adviser of the President. The President admires him probably more than any other man. Doubtless Colonel House's suggestions in regard to the cabinet and to scores of other things we know not of, nor will ever know, have been followed."

Now comes the politician's leading question:

"But what does he get out of it?"

It's a natural question—from the standpoint of politics. And the reply is one that few veteran politicians can understand:

"He gets nothing out of it except the satisfaction of honestly believing that he is serving his country and his party. He is a believer in measures but not of individuals."

Then the army of keen newspaper men got after him. He wouldn't talk beyond the simple statement that he was a private citizen of Austin, Texas, that he was not in politics and that he merely had the honor of being regarded by Mr. Wilson as a friend.

He Starts to Sprout

At the convention that nominated Mr. Wilson for the presidency in 1912 Colonel House was first heard of outside of Texas politics. This was in the summer. Within six months, such items as these appeared in the newspapers throughout the country:

"Colonel House entertained President Wilson at his home, East Thirty-fifth street."—N. Y. Evening Post.

"Colonel House to Have Say in Selecting Cabinet."—N. Y. Herald.

"Col. E. M. House of New York-Texas has come to be regarded as the closest friend of the President."—N. Y. World.

"Colonel House is so intimate with both the President-elect and Mr. Bryan that it is not necessary for either of them to give him directions. He knows the desires of both."—N. Y. American.

"Mr. Wilson said that Colonel House was 'one of the best-poised men I ever met. He can hold a thing at arm's length and discuss it without ever getting mixed up in it.'"—N. Y. Times.

"Trenton, February 19th.—President-elect Wilson refrained from making any statement for publication to-day respecting his long conference with Col. E. M. House in New York last night, but he was enthusiastic in his tribute to the judgment and political acumen of his friend."—N. Y. Sun.

Who Is He?

Colonel House was fifty-nine years old on the 26th of last July. He is the son of T. W. House, a successful Texas banker. The colonel was born in Houston, but made his home in Austin. His father sent him to the Hopkins Grammar School in New Haven and then to Cornell, where he was graduated in 1881. He married Miss Loulie Hunter of Austin the same year, and has two daughters, both now married.

He inherited some money, but made the larger part of his fortune in agriculture, investments and similar ways. He became a director in some banks and railroads, but only in corporations where he could take an active part. He never believed in being a director unless one can actually help direct. The late Henry B. Hyde got him a directorship in the Equitable Trust Company, but when he found that he could not attend all the meetings and take an active part, he promptly gave it up.

Aside from his banking and railroad interests he made much money with his many farms and ranches. He owns many of these and they all pay him well. No one knows the extent of his wealth. It isn't great as so many multi-millionaires are ranked, but all sorts of guesses from one to twenty millions have been made. The favorite "guess" and the one probably approaching the nearest to correctness, is $2,000,000.

He has said that he has enough money. He doesn't care to make any more. He has explained that he has more than he can use, enough for his children, and that he sees no reason to struggle for more. He has a business office in Austin, one small room, with an old-fashioned flat-top desk that has seen better days, a few filing cases, some chairs, a small, old-fashioned safe, and upon the glass door, this lettering: "Mr. Edward M. House."

No "Copy" In Him

Texas newspaper men got tired, years ago, of trying to "make copy" out of Colonel House. But of course outside newspaper men knew nothing of the reticence that seemed to amount to bashfulness on the part of this Texan, and when he went in and worked so successfully for Mr. Wilson's nomination in 1912 the newspaper men flocked to him. It was then that he made, for him, a record-breaking statement.

"We want a Sunday feature story about you. We want to quote you for a column or so in this story," he was told. The colonel almost shouted his reply, he was so aghast at the idea. He started with his old favorite:

"Please do not. I am only just a plain Texan who wants to see Woodrow Wilson elected. Please don't."

Then, in explanation of this, he made his record-breaking statement:

"To a man such as I am publicity is not only annoying, but injurious. I am not seeking anything for myself and I am not seeking anything for anybody else; I am simply trying to do the best I can for the measures I favor. I am for measures, not men. To say that I have been able to accomplish anything would only be to draw upon me attention which would be most distasteful. I am not working for any influence that might be obtained or favors that might be granted; I am just a plain citizen and determined to remain one."

A Real Mystery Man

Ther is no denying that Colonel House is a man of mystery. The mystery of this man took origin down in Texas. He went into politics in his state about 1892, but he didn't make a splash or a ripple in going in. He didn't go in for fun, or to get anything for himself. He wanted Hogg elected, so began quietly to work for him. Hogg was nominated and elected, and since then about all of the Texas governors have had Colonel House back of them.

For a brief moment Colonel House almost held an office. Someone made him chairman of the executive committee that put Governor Lanham in office.

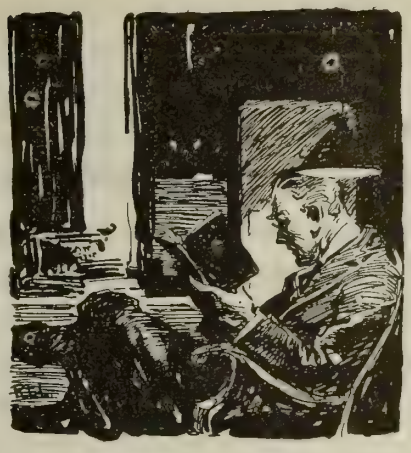
"I can't for the life of me see why I took this; I'll resign," said the colonel, and he did.

About the first we heard of Colonel House outside of Texas was when word went around that the Texas delegation to the National Democratic Convention was being quietly arranged for Wilson instead of Harmon.

"What about this?" was the wire that was sent to the political powers in Texas.

A Pen Picture

"See House," was the reply flashed back. Colonel House was stopping at the Gotham Hotel in New York. Someone was sent to see this man House, not because they believed he had any particular weight, because no one here had heard of him, but merely to act on the advice wired from Texas. The New York *Sun* told the story at the time, explaining that the local politician stood near the clerk and by prearranged signal the clerk pinched his arm when the colonel should appear. The local politician got the pinch, the clerk looked toward the man entering, and the *Sun* writer gave this description:



"A slender, middle-aged man with a gray, close-cropped mustache, well dressed, calm looking, was coming quietly in, with an accent on the 'quiet.' He was not pussyfooting in or slinking in or gliding in, but while he walked firmly he walked quietly. He went up to the desk and asked the man presiding a question in a quiet tone. He did not hiss the question nor did he whisper it; he asked it quietly, and when he got his answer he bowed courteously and walked quietly to the elevator, which, catching the infection, shot quietly out of sight."

A Man Who Does Things

That is just about the sort of a man that Edward Mandell House (the "Colonel" is his by Southern courtesy) has been found to be, and that is about as close a description of him or knowledge of him as the average person will ever get.

He is strictly temperate in all his habits. He gives liberally to charity, but investigates it first. His chief pleasure in charitable work is putting men on their feet after they have had reverses, and in putting deserving young men in the way of achieving success—but he merely puts them in the way of it, they must do the achieving.

By this time everyone knows that Colonel House actually does things in politics, but exactly how or just when, is so well kept under cover that few know.

Naturally it was something of a jolt to a great many veteran, dyed-in-the-wool politicians to find that this unknown Texan was suddenly in President Wilson's confidence, that even before the election the President-elect was frequently in consultation with him. To the Democratic leaders it was a rude jolt that the President-elect should take this comparative stranger so thoroughly into his confidence when they —the leaders—were standing around simply awaiting the oportunity to advise and suggest and "help" their leader.

Predicted Wilson's Election

Long before anyone "up in this neck of the woods," as they say down in Texas, had the least idea that Governor Wilson of New Jersey was presidential timber, Colonel House down in Austin quietly made the prediction that "that college-professor-governor of New Jersey will be the Democratic nominee for president." That was before Colonel House was acquainted with Mr. Wilson.

"He is a puzzle and a mystery to the masses of his own party, the Democrats, here in his own state," said the Houston *Post*, "how much more of a mystery must he be to the masses outside of his own state!"

It is said that not one hundred politicians in all Texas know Colonel House to speak to him—and not a politician of any sort, size, weight, influence or importance, but knows who he is and what he can do.

Without question he could have been a member of President Wilson's cabinet—Secretary of State or any other portfolio he might have preferred—and without qeustion he wouldn't accept it.

If there's any greater man of mystery than one who would refuse that, then he has not been discovered.

TRADE INQUIRIES

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1506. **Pig iron, steel plates for shipbuilding, marine oil engines, etc.**—A Genoa firm who are contractors to the Royal Italian Government, and to the leading shipyards, engineering companies, and shipowners in Italy, are prepared to open negotiations, for after-the-war trade, with Canadian concerns who manufacture the following: Pig iron, metals, steel plates and sections for shipbuilding, auxiliary machinery, marine oil engines and other materials used directly or indirectly in the shipbuilding and engineering trades.

1507. **Electrical equipment.**—An importing house in Genoa, Italy, which is thoroughly conversant with the electrical needs of the Italian market, wishes to correspond immediately with Canadian manufacturers of electric motors, transformers, dynamos, turbines, and electrical cable.

1511. **Machinery and metals.**—An important firm of merchants and representatives in Italy, with head offices in Genoa, and branches in Milan and Naples, would welcome Canadian agencies in metals and machinery, etc., such as agricultural machinery, pumps, railway supplies, machine tools, wrenches, pliers, diesel and semi-diesel twin motors, 100 to 400 horse-power.

1513. **Metals, ferrous and non-ferrous, etc.**—An agent in Milan, Italy, would like to open negotiations with Canadian manufacturers of ferrous and non-ferrous metals, and of metal, woodworking and machine shop tools.

1517. **Wood pulp.**—A Plymouth firm desires the agency for a good concern able to export wood pulp suitable for news and writing paper.

1520. **Iron ore.**—A Plymouth firm desires to import iron ore.

1521. **Ochre.**—Ochre is wanted by a Plymouth firm.

1522. **Minerals.**—A Plymouth concern is prepared to import minerals of all kinds.

1523. **Pastry boards.**—A Plymouth firm desires to purchase pastry boards. They must be clean, well jointed, tongued, and must not shrink. Sizes required: 18 inches by 20 inches, 20 inches by 14 inches, 22 inches by 15 inches, 24 inches by 18 inches, 27 inches by 19 inches, 30 inches by 18 inches.

1524. **Chopping boards.**—Hardwood chopping boards are required by a Plymouth firm. They must not be rimmed and in the following sizes: 12 inches by 10 inches, 16 inches by 14 inches.

1525. **Washboards.**—Canadian manufacturers of washboards are asked to communicate with a Plymouth firm. Washboards should be 12 inches wide and 24 inches long, have dovetailed sides, and be made of hardwood with cross-bar at back, with corrugated, perforated and arched zinc fronts.

1526. **Carpet sweepers.**—A Plymouth firm desires to get in touch with Canadian exporters of the above.

1527. **Clothes pegs.**—A concern in Plymouth is prepared to purchase spring-clip clothes pegs.

1528. **Broom stocks and handles.**—A Plymouth firm would be glad to get into communication with a Canadian exporter of broom handles of spruce or alder in the following sizes: 50 inches by 1 inch, 50 inches by 1 1-16 inch, 50 inches by 1⅛ inch, 50 inches by 1¼ inch; also of broom stocks of alder, 11 to 14 inches long by 2¾ inches to 4 inches wide, with a hole in the top.

1532. **Lamp glasses.**—A firm in Gloucester, Eng., are prepared to act as agents for a Canadian house manufacturing lamp glasses of all kinds.

1534. **Tractors.**—Canadian manufacturers of tractors using paraffin or crude oil for preference who desire to export same are asked to communicate with a firm in Gloucester, Eng.

1535. **Ploughs.**—A concern in Gloucester, Eng., desires to import riding ploughs for three furrows reducible to two furrows when the soil is heavy; to be used with two or three horses.

1536. **Hay loaders.**—A Gloucester house wants hay loaders.

1537. **Lawn mowers.**—Lawn mowers with blades 8 inches to 14 inches are wanted by a Gloucester, Eng., firm.

1538. **Hand and horse hose.**—A firm in Gloucester are prepared to import horse and hand hose.

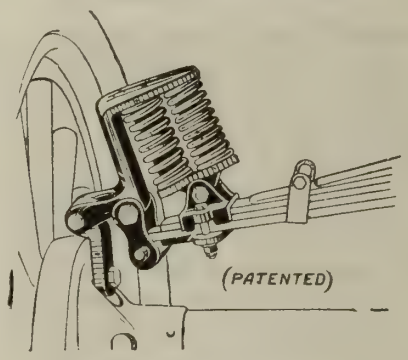
1539. **Oil cookers.**—A Gloucester firm desires to be put in touch with Canadian manufacturers of oil cooking stoves.

1540. **Vacuum cleaners.**—A concern in Gloucester, Eng., is prepared to handle a good vacuum cleaner.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

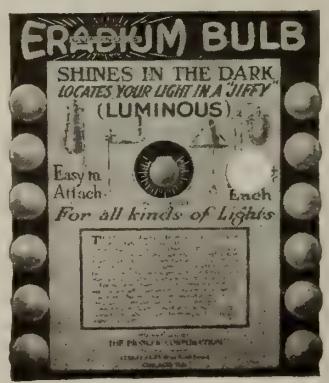
NEW JOINTED VALVE GRINDER



The Hudson Motor Specialties Company, Real Estate Trust Building, Philadelphia, Pa., is placing the Hudson Universal Jointed Valve Grinder on the market. It is claimed for this article that it enables the grinding of valves uniformly. It is fitted with a universal joint that allows the working end a certain amount of motion in any direction relative to the shank. It is claimed for it that when the shank is being revolved between the palms of the operator that the entire valve is accurately ground. It is asserted to be especially useful in grinding the valves of the fourth cylinder of the Ford engine, which is difficult to reach with a solid grinder. The universal joint is of simple construction, being formed by pinning the tool head to the shank with a pin which is much smaller than the hole through the shank. A coiled spring between the head and the shoulder of the shank takes up all looseness and holds the head normally square with the shank. The head of the tool is a die casting, split and adjustable to any valve. Pins, screwdriver blade and spring are stated to be of high-tempered steel, knurled on the handle and provided with a flange to guide the bottom of the hand.

Valve Grinder.

NEW SHOCK ABSORBER

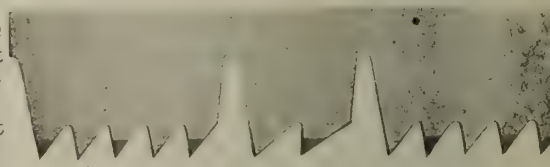


The Champion Shock Absorber Sales Company, 918 N. Senate Avenue, Indianapolis, Ind., is placing a new shock absorber on the market which is designed exclusively for Ford cars, with twin design of auto wheel, with pneumatic cushion spring spokes. It is designed to absorb the jar and recoil of the car springs. It is claimed for it that the absorber is in common mechanical construction with the wheel of the automobile, with its pneumatic cushion springs for spokes, and in its pivot seat of the two coil springs which act as ball bearing wheel spindle, oscillating from the road. It is asserted the car load rides on the springs and off the springs of this shock absorber, equalizing each motion in balance, making the action of one spring the absorber of the other.

Shock Absorber for Ford Cars.

COUNTER BULB DISPLAY

One of the new lines being offered to the trade is a counter display card holding one dozen Eradium bulbs. These bulbs are designed with the idea of attaching to any electric light pull chain or gas key and to give off sufficient light to enable one groping in the dark to find the chain or gas key. The claim is made for these bulbs that they absorb the natural light of the day or artificial light and radiate the light at night. In appearance they resemble white enamel. These bulbs are stated to give off light at night time somewhat after the manner of the luminous watch dials. While new to the trade in Canada the bulbs have been on the market for some little time in the United States. The Pioneer Corporation, 1249-1255 West 63rd Street, Chicago, are the manufacturers, while Towe & Towe, manufacturers' agents, Imperial Bank Building, London, Ont., are distributors for Canada and will send catalog on request.



Eradium Bulbs.

DISSTON DOUBLE DUTY HAND SAW

Henry Disston & Sons, Inc., Philadelphia, Pa., and Toronto, Ont., are now placing on the market a new hand saw which they term "double duty." The Disston saw has, it is said, been made for use in general construction work of all kinds, studding up houses, shoring for sewers, making forms for concrete building, railroad work, millwright, farm use, and in fact for all general purposes.

It is said the tooth-edge consists of a special combination of rip and cross-cut teeth, each section being separated by a deep gullet. Points enumerated by the manufacturer as important are given herewith: When the saw is used for crosscutting the rip teeth act as "cleaners," that is, clearing out the kerf. In ripping there is double action, the crosscut teeth make a scoring cut on each side of the kerf which enables the rip teeth to cut clean, with greater ease and rapidity not only in ripping but in cutting on an angle or diagonally across the grain, which is its specialty.

Double Duty Hand Saw.

The Disston double duty handsaw is made in skewback pattern, the blade of crucible steel, warranted, handle of hardwood, full polished, fastened with brass screws. Made in 26 inch length.

NICKEL-PLATED TOWEL BARS

The Newell Manufacturing Company, Limited, of Prescott, Ont., is placing on the market a new style nickel-plated towel bar. The base is 1¾ in. diameter, while the bar is of 5-16 in. diameter. They are made in lengths of 12, 16, 18 and 20 inches. It is claimed for these bars that they are heavily plated with rust-proof solution before being nickel-plated. The fact that the goods are rust proof is asserted to be one of the distinctive features which works out for substantiability and serviceability. This concern also manufactures what they claim to be the only all-metal toilet paper holder made in Canada.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

FLUCTUATIONS have been many in the linseed oil market during the week though the present basis reveals a somewhat narrower range prevailing than shown in last week's quotations. At one time the spread in prices was 18c following a decline of 5c, but an advance of 6c later narrows the range 1c per gallon. The seed market has been erratic and war news serious, both undoubtedly exerting some influence in the rapid changes. Turpentine declined from 1c to 3c per gallon and very little movement is reported.

Tarred building paper, roofing felt, roofing pitch and tar have undergone revision upward and new prices issued, while not showing very much change, are at advanced figures.

Predictions made last week as to a probable advance in sash cord and cotton rope have been fulfilled and new prices about 2c lower on cord and 5c lower on rope have been issued. The raw cotton market maintains a very firm basis though fluctuations occur, the result of which has been generally that prices end at a little higher level.

Screen wire cloth has advanced 50c to $3.50 per 100 square feet and present indications are that a possible shortage may develop. This will depend largely on weather conditions which one cannot foretell. Clay and rock picks, mattocks and crow bars are being quoted at higher levels in conjunction with post hole spoons. Iron rivets registered a decline. The present discount is 25 per cent., applying to black, tinned and coppered.

Ingot metals show little change though the many restrictions now hedging these in is being felt in Canada. Tin remains firm and though some supplies remain in the city, these are being carefully watched over until news of further shipments is received.

Miscellaneous lines to advance include bench axes, sheep shearing machines, wrecking bars, alarm clocks and sweat pads. Business is reported excellent.

MONTREAL MARKETS

MONTREAL, March 28. — New net prices and also discounts have been arranged for handles, the old prices having been withdrawn last week. Crude oil advances and new freight schedules have served to advance the price of both gasoline and coal oil. It is probable that sheets and plates may be slightly advanced. Black wire cloth has gone up to $3.50 per 100 square feet. It is thought there may be a scarcity of this later in the season. Roofings and building papers are higher. Cotton twines, rope and sash cords are again being revised. Some repair parts for Ford cars are being quoted 20 per cent. less after April 1. This will apply to gaskets, ball races, bearings, springs and some other lines. Sap spouts are reported scarce, the demand having been extremely heavy. Tin still commands much interest and the supply is being measured by importers and jobbers, with the price for Chinese ruling high. New prices have been arranged for picks and are higher. Perfect seal jars are scarce and high. Brooms are up. A good feeling prevails regarding the immediate future for general trade.

House Brooms Higher; Open Prices On Guns

Montreal.

BROOMS, SHOTGUNS.—The broom corn situation is such as to have caused a firming of prices for brooms and an advance of 40c per dozen all around has been made. This means that even a very ordinary broom will have to sell for 75c to 90c and the prices are almost prohibitive. Shotgun prices—for the single-barrelled variety—are not being quoted, the trade only accepting orders at open prices.

New Prices Named For Black Wire Cloth

Montreal.

WIRE CLOTH.—As was expected, an advance has been made in the price of black wire cloth and this becomes immediately effective. The former price was at $3 per 100 square feet and the new is $3.50. It is stated that there will probably be a considerable shortage of the line, but this will depend upon the season to come. If hot and dry weather conditions prevail, jobbers believe that there will not be enough to meet demands.

Roofing And Felts Advance In Price

Montreal.

BUILDING PAPERS AND FELTS.—Advances have been made in the price of various lines of roofings and felts. These are immediately effective. Tarred felt of 7-10 and 16-ounce is selling at $3.30 per hundred pounds. Tarred sheathing No. 2 is quoted at 72c and No. 1 tarred at $1.25. Number 1 dry sheathing is selling at $1.10 and No. 2 at 59c. Surprise sheathing is quoted at 66c, rosin-sized 70c, and heavy tarred straw sheathing $3 per 100 pounds. Two-ply ready roofing is $1.12 per square and three-ply $1.38. Extra heavy dry and extra heavy tarred carpet felts are selling at 3c per pound.

New Discounts Given For All Kinds Handles

Montreal.

HANDLES.—It was stated in the last issue of HARDWARE AND METAL that prices on handles of various kinds had been withdrawn. These are now readjusted. The new discount on fork handles and other lines as shown in the current quotations is 20 per cent., the former being 35%. Net prices have been arranged on the many lines of hammer, pick, sledge and other handles, a discount of 10 per cent. is made to apply to hickory handles of all varieties, and 20 per cent. on maple, ash and other woods. This represents a very stiff advance. Prices are immediately effective.

Picks And Mattocks Make Advances

Montreal.

PICKS, MATTOCKS.—A revision in prices applying to clay picks and mattocks has been made during the week. New prices established on clay picks,

5 to 6 pounds, are $9.55 dozen; 6 to 7 pounds, 7 to 8 pounds, $10.85. Short cutter, long cutter and pick mattocks have all been revised to sell at $10.85 per dozen.

Stoves In Fair Demand; Enamelware Brisk

Montreal.

ENAMELED WARE, STOVES, ETC.—There is a fair amount of business in stoves yet, and the outlook is satisfactory. For enameled ware and other lines such as tinware and galvanized goods the demand is quite active with a good season promising. One of the interesting features of the week is that of the better delivery of raw supplies and tinplate and sheets are received in fairly good volume by the manufacturers of various tin and steel products. Prices are very firm all around and advances will not be surprising for some of the tinware lines and probably for stoves.

Coal Oil Advances 2c; Gasoline Higher

Montreal.

COAL OIL AND GASOLINE.—There has been somewhat of an increased demand for gasoline and this will be more evident with the return of good roads and better weather. Sales of this are expected to be good in 1918. Due to the increased transportation costs and the crude oil situation an advance is made in the price of gasoline of 1½c per gallon, thus making the quotation on motor gasoline 34c. The best grades are as high as 42c per gallon. Coal oil, in sympathy with the strong position for crude oils, has advanced also and the same reflection of the increased freight rates is evident here. Royalite oil is now priced at 19c per gallon, Palacine and Electroline at 22c, and these prices are effective at once.

Fair Demand Prevails For Wire Nails And Wire

Montreal.

WIRE NAILS, WIRE, ETC.—There is a fairly good demand for nails for spring shipment. Interest now begins to centre in the opening of navigation, but it will be some considerable time before there is a break-up here, unless indeed the weather should become very soft. The snow is going gradually but nights are cold. However, those who had not previously booked their wants for nails are now doing so in many instances, and there will be much activity ere many weeks in this line. Wire nails are selling still at $5.25 base per 100 pounds, and cut nails at $5.60. Smooth steel wire sells still on a base price of $6.25 per 100 pounds.

Steel And Bar Iron Quiet And Firm

Montreal.

BAR IRON, STEEL, ETC.—With a certain amount, of difficulty still confronting the jobbing trade with regard to deliveries, there is but a limited amount of interest and sales are somewhat small and country business continues better than the city. Prices are held firmly for all products. There is little inclination upon the part of manufacturers in the United States to accept bookings far ahead for iron products and the trade is generally interested in price revisions to be made or announcements regarding fixing of these by the U.S. War Trade Board.

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 17½-0 19
Black Diamond tool steel, per lb.	0 18 -0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 20-0 21

Sheets And Plates Slow; Some Changes Probable

Montreal.

SHEETS AND PLATES.—There is probability of a revision in the price of sheet and steel plate. Prices are likely to receive consideration upon the part of importers in the very near future and there is talk of a somewhat firmer tendency, although this will probably not be great. Considering the large demand for raw materials there is not likely to be any great surplus of supplies and sheets will, as stated, likely receive due consideration as to price in the very near future. In the meantime a fair amount of trading is being done, seasonably speaking.

BLACK SHEETS—		100 lbs
10 gauge	$8 00	$11 50

18 ga.		8 85
16 ga.		8 70

Better Tone Evident For Lead Products

Montreal.

LEAD PRODUCTS.—That there will be a greater interest and better sale for manufactured lead products is evident from the trend of conditions at the present time. Business is gradually showing improvement and a fairly active season for some of the lines, at least, is anticipated. Prices are held firmly without change. The prices on solder have been revised, in view of the advances that have been made for tin and strictly is selling at 53c per pound and revisions upward have been made in the prices of other grades.

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....

Do., broken lots	0 28	0 32

With A Firm Undertone Old Material Unchanged

Montreal.

OLD MATERIALS.—While there is not a great deal of movement as yet, the tone of the old iron and steel market, particularly, rules firmly. Prices for all lines are pretty steady and with a demand for these scrap metals more active than heretofore, prices may be even further advanced. In the other metals and scrap materials there is no change but prices are firmly maintained.

Tea lead	$ 0 05	$0 06½
Heavy lead pipe	0 06¼	0 06½

No. 2 busheling	13 00	14 00

Activity In Rope Market Is Deferred

Montreal.

ROPE AND CORDAGGE.—There is still a quietness in the rope market, but this condition will probably gradually disappear. Dealers will naturally buy carefully with prices so high, but in view of all the attendant conditions there will be little chance of more favorable quotations, it is affirmed. Even if merchants do not buy in large volume there is likely to be a better sorting demand in the near future. While a fairly quiet condition prevails in the United States, the transportation trouble there is causing more than little inconvenience. Prices are for pure manila, base 39c; for British manila 33c, and for sisal 27½c. The situation on cotton rope and kindred lines is very firm.

Ingot Tin Supplies Are Getting Smaller

Montreal.

INGOT METALS.—There is continued interest here and in import centres regarding the probable length of time during which available supplies of tin are likely to last. It is evident that they will be increasingly hard to obtain.

COPPER.—There seems to be enough copper for present needs. These are large, taking the country as a whole, while there is a fair demand in Canadian centres. Prices are firm and unchanged at 33 to 34c per pound.

LEAD.—Trading in pig lead is confined and the situation is therefore of limited interest. This applies to the U. S. markets. Locally, there is a little more activity and the price holds at 10½ to 11c per pound.

TIN.—United States importers are very anxious to get their hands on stocks. Trading is confined to the limited supplies and in trading a good deal of interest centres around Chinese tin at advanced prices. Locally the market is steady and the price is even a trifle firmer with sales made at $1 to $1.05 per pound.

SPELTER.—There is a somewhat easier tone to the spelter market, and locally it is scarce. Movement in this market is slow with sales made still on the basis of 10 to 10½c.

ANTIMONY.—Quiet and uninteresting. In the United States points the situation is easier. Locally prices are from 17 to 18c pound.

ALUMINUM.—In sympathy with the fixed prices for this, there is an easier tone and prices are based at 50 to 52c per pound.

TORONTO MARKETS

TORONTO, March 28.—Numerous changes in prices have been recorded during the week and the trend has been towards higher levels in the majority of lines, though iron rivets show a decline. Black wire cloth has advanced 50c per 100 square feet, sash cord and cotton rope are higher, and a change upward in roofing pitch, tarred felt, tarred building paper is reported. A substantial advance in clay and rock picks, mattocks, crowbars and wrecking bars is provided for in new prices issued, and bench axes, sheep-shearing machines and post-hole spoons are other items to climb. Business is reported good and optimistic reports in regard to probable spring business are heard in practically all quarters.

Bench Axes Register Big Advance

Toronto.

BENCH AXES.—A decidedly big advance has been recorded in bench axes during the week, new prices being about 15 to 20 per cent. higher than those formerly ruling. Quotations being made on the new basis are for No. 2 $13.20; No. 3, $14.20; No. 4 $15.25 per dozen. No change on other lines has been recorded, but a very firm situation prevails.

Alarm Clocks Higher; Watches, Too

Toronto.

ALARM CLOCKS, WATCHES.—Higher prices have been established on alarm clocks and watches, new quotations providing for an advance. Big Ben alarm clocks are now quoted at $2.92 each and Baby Ben the same; Ironclad are quoted at $2.00 each. Pocket Ben watches have also gone up in price and are being sold at $1.20 each.

Advance In Tire Holders; Shock Absorbers Decline

Toronto.

TIRE HOLDERS, SHOCK ABSORBERS.—Basket type tire-holders have undergone revisions upward. Those for Ford cars, with license and lamp bracket, No. 203, are listed at $7.00 each and the No. 205, complete for running board, $5.75 with a discount prevailing of 25 per cent.; in lots of six, 30 per cent.; in lots of twenty-four, 35%. Aitchandee shock absorbers suffered a decline of about 15 per cent. The twin arm, per set of 4, now sell at $6.50 instead of $7.50; in lots of $6.50 instead of $7.15, and gross lots $5.65 instead of $6.50.

Picks, Mattocks, Bars Go To Higher Levels

Toronto.

PICKS, MATTOCKS, BARS.—Clay and rock picks, mattocks, crowbars and wrecking bars have all come in for revision during the week, the present quotations representing a substantial increase over those prevailing last week. Present prices on these lines follow:

	Per Doz.	
Clay picks, 5-6 lb.	$ 9.55	$10.00
Clay picks, 6-7 lb.	10.05	10.55
Clay picks, 7-8 lb.	10.85	11.40
Clay picks, 8 lb.	11.10	....
Rock picks, 7 lb.	10.85	....
Rock picks, 8 lb.	11.10	....
Rock picks, 7-8 lb.	....	11.40
Short cutter mattocks	11.10	11.40
Long cutter mattocks	11.10	11.40
Pick mattocks	11.10	11.40
Crowbars	$8.75 per	100 lbs.
		Per Doz.
Wrecking bars, 24 in.		$5.20
Wrecking bars, 30 in.		5.70
Wrecking bars, 36 in.		6.45

Sheep Shearing Machines Post Hole Spoons Revised

Toronto.

SHEEP SHEARING MACHINES, POST HOLE SPOONS.—A revision has occurred in the prices prevailing on sheep shearing machines, the No. 8 now being listed at $15.00 each, subject to a discount of 25 per cent. Post-hole spoons have also gone to higher levels and present lists, with 6-foot handle, are $25.00 per dozen; with 8-foot handle $35.00 per dozen, being subject to a discount of 25 per cent.

Wire Cloth Up 50c; Iron Rivets Decline

Toronto.

WIRE CLOTH, IRON RIVETS.—Wire screen cloth registered an advance of 50c per 100 square feet and indications are that supplies will be no more than, if equal to, the demands. Weather conditions will largely determine the question of supply. The present basis for this commodity in 100-foot rolls is $3.00 per 100 square feet and in 50-foot rolls $3.55.

As predicted in HARDWARE AND METAL last week, declines have been registered in iron rivets and burrs, the new discounts being 25 per cent. as against 15 per cent. formerly prevailing. This affects black, tinned and coppered iron.

Tarred Building Paper, Felt, Roofing Pitch Change

Toronto.

BUILDING PAPER, FELT, ROOFING PITCH.—Refined tar has gone to higher levels during the week, being quoted at $7.25 in barrels and $1.75 in five-gallon cans. Crude coal tar is also higher at $6.00 barrel. The firmer situation developing in tar has resulted in some changes being made in building lines. No. 2 tarred building paper is selling at 72 per roll. Tarred roofing felt shows higher levels in a range of $3.30 to $3.45 per 100 pounds. Roofing pitch is now being quoted at $1.05 to $1.10 per 100 pounds.

Sash Cord Advances; Cotton Rope Up

Toronto.

SASH CORD, COTTON ROPE.—The continued advances in the primary markets on raw cotton have resulted in new quotations at higher levels being put into effect on sash cord and cotton rope. Prices now established on sash cord No. 6 are 69c; No. 7, 68c; No. 8 and larger, 67c per pound. An advance of from 5 to 6c per pound is provided for in the new range of prices now prevailing on cotton rope. These are as follows:

⅛ in., 70½ to 73c per lb.; 5-32 in., 69½ to 72c per lb.; 3-16 in., 66¼ to 69c per lb.; ¼ in. and larger, 65 to 68c per lb.

Further Advance Recorded In Sweat Pads

Toronto.

SWEAT PADS, STICK-FAST PASTE.—Further advances have been recorded in sweat pads, the new prices established on brown and white 10-inch being $7.30; 11-inch, $7.50; 12-inch, $7.60 per dozen. Red and yellow are also higher, the 10-inch now selling at $7.70; 11-inch, $7.85; 12-inch, $8.00 per dozen.

Stick-Fast paste, 1-lb., have gone up to $1.60 in case lots and $1.75 per dozen in small lots; the 2-lb. to $2.85 in case lots and $3.10 per dozen in small shipments.

Wire Nails Holding Unchanged; Demand Fair

Toronto.

NAILS, WIRE.—Little change in the situation as regards wire nails is reported during the week. The market is holding very firm, though for the present no change is anticipated. Orders continue to come in from the retailers in fair volume. The base price on wire nails of $5.20 per 100 pounds, and on cut nails of $5.65 per 100 pounds, shows no variation. Smooth steel wire remains the same at $6.25 per 100 pounds base.

Coal Oil Up 1c And Gasoline 1½c Gallon

Toronto.

OILS, GASOLINE.—Increased freight rates combined with an advance in crude oil of 25c has resulted in an advance being put into effect on coal oil of 1c and gasoline 1½c per gallon. Supplies are coming through in ample quantities and the demand for gasoline shows marked improvement. Royalite coal oil is now being quoted at 18c per gallon; Palacine, 21c per gallon, and gasoline 33c per gallon.

Summer Lines Stoves Moving Freely

Toronto.

STOVES, ENAMELWARE.— The movement in practically all summer lines of stoves, coal oil, gasoline, gas and elec-

tric is brisk. Already the view is expressed that a shortage may exist in oil stoves and ovens before the real hot weather prevails, so dealers are being urged to order early and anticipate their season's requirements. The situation in enamelware shows no improvement and orders are going forward with a short list attached for some lines. Business is splendid but available stocks are none too heavy.

Situation In Steel And Iron Unchanged

Toronto.

IRON AND STEEL.—No change in the position of iron and steel bars has been made during the week. Prices on all lines have been firmly maintained and a very fair movement is in progress. Stocks are equal to present demands but by no means heavy.

TORONTO—	Per 100 lbs.	
Common bar iron	....	$ 5 25
Common bar steel	....	5 50

Tool steel	0 20	0 42

Prices Maintained On Galvanized Sheets

Toronto.

SHEETS, PLATES.—Prices established last week representing a decline have been firmly maintained and little excitement is to be noted in regard to galvanized sheets. Prices show a wide range at the present time but this is one commodity on which this condition usually prevails. The demand shows signs of improvement and with the opening up of spring the movement is expected to be very good. Nothing of moment has developed in regard to black sheets and prices are being firmly maintained at figures shown below:

BLACK SHEETS—	Per 100 lbs.	
10 gauge	$10 00	$12 00
12 gauge	7 55	10 10
14 gauge	7 45	8 40
16 gauge	7 30	8 50

16	7 95	8 20 9 45
14	7 85	8 10 9 35

Interest In Corrugated Sheets And Eavetrough

Toronto.

CORRUGATED SHEETS, EAVETROUGH.—Increased interest is apparent in the demand developing for corrugated sheets, eavetrough, conductor pipes, etc. This is by no means heavy as yet but with the opening up of spring, improvement is being shown in the volume of business being handled. In some quarters, the difficulties in getting sheets delivered by the railway has resulted in a temporary shortage, but this it is hoped will not assume too serious proportions. Prices have shown no change for the week, prices on corrugated sheets being shown below; the other lines will be found in current market quotations.

TORONTO—	Per 100 Sq. Feet Galvanized	Painted
No. 28 gauge	$ 8 25-$ 8 75	$6 75-$7 25
No. 26 gauge	9 00- 9 50	7 75- 8 25

No. 20 gauge	19 00-	16 50
No. 18 gauge	23 00-	20 00

Discount 7½%.

Wrought Iron Pipe Moving; Boiler Tubes

Toronto.

WROUGHT PIPE, BOILER TUBES.—A fair movement in wrought iron pipe is developing but as yet orders are not heavy. Indications are that stocks throughout the country are at a low level as all orders coming to hand are usually specified "rush." Under existing conditions this is not always possible. Stocks in the city are none too plentiful and manufacturers indicate that raw materials are hard to get. There is nothing doing in boiler tubes and prices as given below show no change. Prices on wrought iron pipe appear in current market quotations.

Boiler Tubes—	Cold Drawn	Lapweld
1 inch	$36 00	$ ....
1¼ inch	40 00	....
1½ inch	43 00	36 00
1¾ inch	43 00	36 00
2 inch	50 00	36 00

3¼ inch	....	58 00
3½ inch	77 00	60 00
4 inch	90 00	75 00

Solder Holds Firm; Other Lines Unchanged

Toronto.

LEAD AND ZINC PRODUCTS.—Solder held firm during the week and no change was made over advanced quotations put into effect last week. Business is reported excellent and as yet the scarcity of tin has not resulted in a possible solder shortage being mentioned. Stocks are in good shape and orders are being taken care of promptly. Little interest is apparent in lead pipe, traps and bends or sheets. Business on these is practically at a standstill though with the opening of spring some improvement is expected. Present quotations on all lines follow:

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	
Lead wool, lb.		0 16
Lead sheets, 3 to 3½ lbs. sq. ft., lb.		0 13¼
Lead sheets, 4 to 8 lbs. sq. ft.		0 12½
Cut sheets, ¾c lb. extra, and cut sheets to size, 1c lb. extra.

Solder, wiping, lb.	0 40¾	0 45¼
Solder, wire, lb.	0 50½	0 58½
Zinc sheets, per lb.	0 26	....

Old Materials Show Little Activity

Toronto.

OLD MATERIAL.—There is little to note during the week, real activity being conspicuous by its absence. There is some movement reported but in other quarters the situation is classed as absolutely stagnant. Dealers generally are looking ahead to when improvement may be expected and indications would seem to be that this is not far distant. Changes of a sensational character are not expected to develop in respect to prices, either up or down.

Country mixed scrap	....	16 00

Waste Unchanged; Oakum All Sold

Toronto.

WASTE, OAKUM.—Waste shows no developments of movement during the week and conditions may be said to be unchanged. Roll cotton is reported up and the conditions in primary market on raw cotton are very firm. This is said to be a factor in firmly maintaining prices on waste here. However, another point brought out is that more cotton is now being used, consequently more waste is available and heavy stocks usually have a tendency towards weakening the market. From this it may be gathered that the future is somewhat uncertain as regards prices.

In one quarter it was stated that oakum held little immediate interest. This was due to the fact that all stock was sold at the present time. There is really little doing at the present time and the market is inactive. Prices on oakum and waste appear in current quotations.

Interest Reviving In Rope; Twine Moving

Toronto.

TWINE, CORDAGE.—With improved weather conditions pointing to spring, interest is becoming more manifest in rope and the demand is showing some improvement. Orders are by no means heavy but are expected to increase in volume. Pure Manila remains unchanged in price at 39c base per pound, British Manila at 33c and sisal at 27½c. Binder twine orders are already commencing to move and this is expected to be quite general from now on.

Cement Steady; Supplies Plaster Of Paris Light

Toronto.

CEMENT, PLASTER OF PARIS.—Cement shows no marked improvement in the volume of business being handled and prices remain unchanged at advance recorded last week. In car lots, the price is now $2.70 and in small ship-

ments $3.25 per bbl. with a rebate of 5c for payment in 20 days.

Supplies of plaster of Paris are limited, shipments being delayed in transit which would enable the completion of many orders now on file. Prices which appear in current market quotations show no change.

Harness Leather Moving Freely; Belting Too

Toronto.

HARNESS LEATHER, BELTING.—A big volume of orders is going forward of harness leather which would indicate that farmers are getting everything in readiness for the spring drive on the land. Business on belting is being maintained at a high level and no change over discounts appearing in current quotations has been made. Tap soles and lifts are moving out in very good quantities also.

Ingot Metals Feeling Restrictions; Unchanged

Toronto

INGOT METALS.—The metal market is feeling the effect of the many restrictions that have been placed around it. These have been in operation long enough to have a combined effect on the Canadian market. Gradually the stocks in the Canadian shops are being reduced, and they are not being replenished in accordance. Dealers see in this state of affairs a higher level of prices.

COPPER.—Shipments of copper are smaller than usual. United States has done a very large export business in this metal. Russia is not turning out enough copper for her own use, due largely to the unsettled conditions that have been prevailing there. United States sent 80,000 tons of copper to that country last year. The U.S. Government, apparently at the suggestion of the Allies, is purchasing all the available copper, and as no figures are given out any guess as to the volume of trade is bound to be somewhat vague. Prices locally remain unchanged at 30c to 32c per pound.

TIN.—Here the war situation seems to be a dominant factor, and the strained relations between United States and the Dutch Government is helping to make the tin market an uncertain one. The amount of this metal in trade is small though some stocks are still held locally. The price remains firm at from 95c to $1.00 per pound.

SPELTER.—The gradual falling off in production, which has been quite noticeable since the first of the year, is being reflected in the local market conditions. Dullness marks the primary markets and price of 9¾c to 10c per pound locally remains unchanged.

LEAD.—Difficulty in transportation is still a factor in deliveries of lead and dullness prevails in the primary market. Prices locally remain unchanged at 9½c to 10c per pound.

ANTIMONY.—Nothing of interest is apparent in the situation here. The demand is light and local, quotations ranging from 16½c to 18c per pound.

ALUMINUM.—The government demands still continue to absorb the bulk of supplies which are reported light. Primary markets exhibit little of interest and prices locally remain unchanged at 60c per pound.

PIG IRON.—The position of pig iron is up and down. Increased receipts of coke result in increased production but the difficulties of transportation, by no means yet overcome, are a deterrent factor in coke coming through in sufficient quantities. Foundry iron is being quoted at $49.50 per ton.

LONDON MARKETS

LONDON, March 28. — Many changes have occurred in the market quotations during the week and advances are shown in such lines as cotton twine, sash cord, cotton rope, cotton clothes lines, shaving soap, sheep shearing machines, lawn rakes, etc. Turpentine registered a decline of 3c per gallon thought little movement is reported. Garden tools and seeds are now star sellers along with other spring lines. Prepared paints are also in better demand along with varnish stains, varnishes, paint brushes carpet beaters, etc. for housecleaning. Business is good and an optimistic tone prevails.

Cotton Rope, Sash Cord, Twine, All Advance

London.

COTTON ROPE, TWINE, SASH CORD, CLOTHES LINES.—An advance in cotton goods has occurred during the week, rope, twine, sash cord and clothes lines all being affected. The advance approximates 5 per cent. all the way around and new prices now prevailing are as follows:

Cotton twine, 3-ply, 66c lb.; 4-ply 70c.

Sash cord, per lb., No. 6, 69c; No. 7, 68c; Nos. 8 to 12, 67c.

Cotton Rope, per lb., 3/16 in., 63c; ¼ in. and larger, 62c.

Cotton Clothes Lines, twisted, per doz., 30 ft., $2.45; 48 ft., $3.60; 60 ft. $4.50.

Plough Lines Higher; Screen Wire Up 50c

London.

PLOUGH LINES, SCREEN WIRE CLOTH.—An advance in prices applying to Russia hemp plough lines has occurred during the week, quotations now being made on the basis of $6.00 dozen pairs.

Screen wire cloth, painted black, has advanced 50c per hundred square feet and doubt is expressed as to whether supplies will be equal to the demand. The new prices are, in 100 ft. rolls, $3.50; in 50 ft. rolls, $3.55 per 100 square feet.

Hose Clamps, Menders, Lawn Sprinklers Advance

London.

HOSE CLAMPS, MENDERS, LAWN SPRINKLERS.—New prices issued on hose clamps, hose menders and lawn sprinklers reveal an upward tendency as shown in the following list of figures:

Galvanized hose clamps, per dozen; ½ in., 35c; ⅝ in., 38c; ¾ in., 38c; 1 in., 60c; 1¼ in., 95c; 1½ in. $1.20.

Cast hose menders, per doz.; ½ in., 50c; ¾ in., 60c.

Lawn sprinklers, per doz.; Cyclone, $24; Pluvius, $19; B, $21.

Sheep Shearing Machines Advance

London.

SHEEP SHEARING AND HORSE CLIPPING MACHINES. — Of interest during the week is the advance recorded in Stewart sheep shearing machines. Prices on horse clipping machines and plates for same show no change and a splendid sale of horse clippers is manifest. Present quotations on these lines are:

Stewart sheep shearing machine, No. 8 takes new list of $15.00 each with a discount of 25 per cent.

Stewart horse clippers, No. 1, $8.25 each, net.

Plates for same, top, 94c each; bottom, $1.31 each.

Booked Orders For Rope Nearly Completed

London.

ROPE.—A very fair movement of rope has taken place during the week, orders going forward applying largely on bookings placed some months ago. No change in prices has occurred and none is expected to develop, the quotations given herewith being a very fair gauge of the market: Pure Manila, 39c; British Manila, 33c; New Zealand hemp, 33c; sisal, 27½c per pound base.

Nails Unchanged; Tinker Solder Sold By Doz. Bars

London.

NAILS, SOLDER.—No special interest ataches to the nail market during the week and prices remain firmly established on the base for wire of $5.20 and on cut $5.60 per 100 pounds.

A new method of selling tinker solder has been adopted, the prices established being figured out on the per dozen bars basis at $1.75.

Sweat Pads Higher; Lawn Rakes, Too

London.

SWEAT PADS, LAWN RAKES, SHAVING SOAP.—An advance has occurred in yellow sweat pads as revealed in the present quotations on No. 63 x 11 inch of $6.90 per dozen.

Wire lawn rakes have also gone to higher levels, the new price on 24 tooth being $9.75 dozen.

Shaving soaps and creams are also becoming more expensive and quotations shown herewith provide for a fairly substantial advance. Williams' shaving stick, large, now sell at $3.35 per dozen; Williams' shaving cream, $3.35 and Williams' shaving powder, $3.35.

Oil Stoves Move Freely; Pumps, Oyster Shell

London.

OIL STOVES, PUMPS, OYSTER SHELL.—A fair movement is reported in oil cooking stoves, the demand being fairly heavy for so early in the season. No change in price is represented in following figures:

Perfection or Puritan, each, 2 burner, $12.75; 3 burner, $16.50; 4 burner, $21.

Beatty Bros. have issued new net price list on pumps and pump parts, etc., showing an advance in most lines.

Oyster shell is being quoted at $1.00 per 100 pounds.

Linseed Oil Firm; Turps Decline

London.

LINSEED OIL, TURPS. — Local prices on linseed oil have been firmly maintained at high level established a couple of weeks ago. The seed market though showing fluctuations of a wide nature is back at about the basis prevailing a week ago. Quotations show no change:

	Raw	Boiled
1 to 2 barrels	$2.00	$2.03 per gal.
3 to 5 barrels	1.99	2.02 per gal.
6 to 9 barrels	1.97	2.00 per gal.

Less barrels add 10c gallon.

A decline in turpentine of 3c per gallon has occurred during the week. Continued weakness in the primary market has brought this about. Present quotations providing for this decline are: 1 barrel lots, 67c Imp. gal.; 2 to 4 barrel lots, 66c Imp. gal.; 5 gal. lots, 77c Imp. gal.

White Lead, Putty, Glass Unchanged

London.

WHITE LEAD, PUTTY, GLASS.—Quotations on white lead in oil and putty remain unchanged at advances recorded last week. Glass is holding firmly. A slight improvement in demand on all lines is apparent. Quotations ruling are:

White lead, pure, tons, $16.20 per 100 lbs.; less tons, $16.55 per 100 lbs.; pure elephant tons, $16.70 per 100 lbs.; less tons, $17.05 per 100 lbs.

Putty, standard, 25-50-100 lb. drums, $5.40 per 100 lbs.; pure 25-50-100 lb. drums, $7.40 per 100 lbs.

Glass, single diamond, 25 per cent. double diamond 25 per cent.; cut lights, 10 per cent.

WINNIPEG MARKETS

WINNIPEG, March 28.—Hardware markets for the past week again show an upward trend with the exception of drop shot and Eley's loaded shells. Among the advanced lines appear garden barrows, waffle irons, rules and tapes, bolt clippers, Swift lubricators, Starr skates, white lead in oil, and solder.

The weather for the past two weeks has been remarkably mild with the result that seeding has commenced in some districts and some hardware dealers who have cars specified for April 1 shipment find themselves unprepared for the early spring opening. Winnipeg jobbers are rushing out cars as fast as possible and it is expected the bulk of spring shipments will be completed by April 1.

Change Method Of Invoicing Anvils

Winnipeg.

ANVILS.—A change has been made in the method of invoicing Vulcan anvils. In the past these have always been sold by the pound. However, as these are invoiced by the manufacturers at so much each the Winnipeg jobbers have decided to adopt the same method. This change in selling policy does not constitute an advance in price as prices quoted below are practically the same as when sold on the pound basis. The following are to-day's ruling prices:

Vulcan—No. 5, about 50 lbs., $8 each; No. 7, about 70 lbs., $11.20 each; No. 8, about 80 lbs., $12.80 each; No. 9, about 90 lbs., $14.40 each; No. 10, about 100 lbs., $16 each; No. 11, about 110 lbs., $17.60 each; No. 12, about 120 lbs., $19.20 each; No. 13, about 130 lbs, $20.80; No. 14, about 140 lbs., $22.40 each; No. 15, about 150 lbs., $24 each.

Rules And Measuring Tapes Higher

Winnipeg.

RULES, TAPES.—The Lufkin Rule Co. have again been compelled owing to increased costs of raw material to revise prices on rules and tapes. New prices, however, show only a small increase and affect only a small portion of the complete line. The following are a few of the more familiar lines:

B. W. Rules, No. 651B., $1.90 doz.; No. 1167, $5.00 doz.

Measuring Tapes—No. 710, $3.70; No. 713, $4.90; No. 714, $5.85 doz.; No. 603, $2.60; No. 604, $2.90; No. 606, $4.25 each.

Lubricators And Repairs Go To Higher Levels

Winnipeg.

LUBRICATORS AND REPAIRS.—Owing to the high prices prevailing on brass a further advance has become necessary on Swift lubricators. This shows an increase of 10 per cent. over former quotations. A proportionate increase is also shown on all lines of repairs. Prices now prevailing are quoted herewith:

Swift lubricators—½ pint, $4; 1 pint, $6.60; 1 quart, $8.25 each.

Repairs.

Glasses and gaskets—½ pint, 78c; 1 pint, 85c; 1 quart, $1 dozen.

Drain cocks—½ pint, 26c; 1 pint, 26c; 1 quart, 26c each.

Equalizing tubes—½ pint, 32c; 1 pint, 32c; 1 quart, 39c each.

Condensers ½ pint, 97c; 1 pint, 97c; 1 quart, $1.30 each.

Filler plugs—½ pint, 52c; 1 pint, 65c each.

Regulating valves—½ pint, 39c; 1 pint, 39c; 1 quart, 52 each.

Soft And Chilled Shot Register Decline

Winnipeg.

SOFT CHILLED SHOT.—New prices have just been issued on drop and chilled shot, which show a marked decline. This is the first change recorded for the past six or eight months. Prices now effective are as follows:

Common, $17.20 per 100 lbs.; chilled, $18.70 per 100 lbs.; S.S.G. to 4A, $18 per 100 lbs.; 28 ball, $18.40 per 100 lbs.

Loaded Shells Decline $1.25 Per Thousand

Winnipeg.

LOADED SHELLS.—Following the decline in the price of drop shot new prices have just been issued by Eley Bros. showing a reduction in the prices on loaded shells of approximately $1.25 per 1,000. To-day's prices are as follows:

Black powder soft shot—B.B., 10 ga., $32; 12 ga., $29.75; 16 ga., $28.25 per M.; No. 1 to No. 6, 10 ga., $31; 12 ga., $28.75; 16 ga., $27.25 per M.

Smokeless powder, Dupont, Ballastite or 33 grain—10 ga., $38.30; 12 ga., $34.50; 16 ga., $31.50 per M.

Solder Goes Up 5c Per Pound

Winnipeg.

SOLDER.—In a recent issue of HARDWARE AND METAL higher prices were predicted on solder. New prices just issued confirm same, showing an advance of 5c per pound. To-day's quotations on half and half solder in cases is 54c per pound, in less than cases 55c.

The market is very firm on solder owing to the strength of tin, and even further advances would not be unexpected.

Booking Skates For Fall Delivery

Winnipeg.

SKATES.—Bookings are now being taken by Winnipeg jobbers on Starr skates for fall delivery. New prices just issued by manufacturers again show an increase over last year but not as large as anticipated, being only from 5 to 10 per cent. Prices now in effect are quoted herewith:

No. 189, $4.20; No. 193, $2.80; No. 194, $2.25; No. 173, $1.90; 156, $1.20; 157, $1.90; 184, $2.60; 100, 90c.; 150, $1.15; 153, $1.00; 154, $1.30; 181, $4.55 per pair.

Bolt Clippers, Waffle Irons, Garden Barrows All Up

Winnipeg.

BOLT CLIPPERS, WAFFLE IRONS, GARDEN BARROWS.—Prices on new Easy bolt clippers, although advanced only a month ago, are again on the upward trend, showing a further advance of 10 per cent. This provides for quotations to-day on the following basis:

No. 0, $3.95; No. 1, $5.25; No. 2, $7.35; No. 3, $9.45 each. Extra jaws are now selling at 20 per cent. advance on list.

Prices on waffle irons, which have remained firm for some time past, move up,

showing an increase of approximately 10 per cent. These are quoted to-day as follows: Taylor-Forbes No. 8, $14.25 doz.; Genuine Stover No. 8, $19.20 doz. Due to further increased cost of production a slight advance has been recorded on Maxwell garden barrows and prices now effective are as follows: No. 2, $5.50; No. 5, $6.00; No. 9, $4.75; Junior No. 10, $3.50 each.

White Lead In Oil Up 50c Hundred Pounds

Winnipeg.

WHITE LEAD IN OIL.—Prices on white lead in oil, which have been on the decline for some time past, have again strengthened and this week's market shows an advance of 50c per 100 pounds. This is largely due to the high market on linseed oil. Prices ruling to-day are as follows:

Decorators' Pure—Ton lots, $16.65 per 100 lbs.; less, $17.00 per 100 lbs.

Decorators' Special—Ton lots, $15.65 per 100 lbs.; less, $16.00 per 100 lbs.

Linseed Oil And Turps Remain Unchanged

Winnipeg.

LINSEED OIL, TURPENTINE.—Linseed oil prices still hold firm despite the erratic nature of the flax market. Prices ruling to-day are as follows: Raw, $2.00 gallon; boiled, $2.03 gallon.

Turpentine prices hold firm as formerly quoted: Barrels, 80c gallon; ½ barrels, 83c gallon; 5-gallon lots, 85c gallon; 1-gallon lots, 85c gallon; plus the usual extras for containers.

PITTSBURG MARKETS

PITTSBURG, Pa., March 28.—Various reports are in circulation, coming chiefly from Washington, regarding Government prices on iron and steel. The conference between the War Industries Board and the producers, called for last Wednesday, extended over to Thursday. While the more common view is that the matter rests entirely with the board, with an announcement in prospect next week after the President has approved whatever conclusion the board may reach, there are rumors that the matter was finally agreed upon at the meeting. The most generally circulated rumor is that the changes effective after March 31 are simply that basic pig iron will be reduced $1 a ton, to $32 at furnace, with a corresponding reduction in Bessemer, and scrap will be reduced $1 to $2. This report does not have the right ring, as it would make the following pig iron schedule: Basic, $32; No. 2 foundry, $33; malleable, $33.50; Bessemer, $35.20, all f.o.b. furnace, wherever located. It would be good form to put basic below foundry, or rather leave foundry above basic, as furnaces are less disposed to make foundry than basic, but malleable at $1 above foundry and $1.50 above basic would be quite indefensible. As to scrap, it is hardly in line for iron and steel producers to "consent" to a reduction, for it is material they buy, not sell. There may be more extensive reductions than have been hinted at in the schedule as a whole. If not, and with an extension to June 30, as seems more probable than the extension to the end of the year desired by producers, one may well look forward to reductions by June 30.

Light Commercial Demand

The outstanding feature of the market situation is the lightness of commercial demand for steel products. There is continued pressure for oil country goods and for small spikes, also perhaps for sheets, and some demand for deliveries of standard steel pipe, but outside of these items the commercial demand is certainly very light. This condition cannot but be regarded as significant, seeing that Spring has come, when usually there is much heavier demand for steel products, and seeing also that shipping conditions have greatly improved and consumers have a much better opportunity to conduct their operations. There is for instance, no longer any serious shortage of coal among the consuming industries. It is difficult to see how there can be anything but an easier steel market in future. Of course this might not result in sellers going out actively after business. Seeing that they have such a large tonnage of unfilled contract business with their regular customers they are naturally more interested in this business being carried out than in their booking fresh contracts.

Coke Supplies

Last week's Connellsville coke shipments were a trifle disappointing, seeing that they were 333,953 tons, against 334,584 tons the preceding week, representing a slight decrease, but the preceding week's shipments had represented a large gain, no preceding week in the year having shown as much as 300,000 tons shipped. It is estimated that shipments in the week just ending have been heavier, say 350,000 tons. It is still an acceptable estimate that the requirements of the furnaces depending upon Connellsville coke are about 375,000 tons weekly, so that at this rate the furnaces should soon be fully supplied, as shipping conditions are practically certain to improve more or less steadily. The by-product ovens are receiving very nearly full supplies of coal, so that altogether the blast furnaces are on the verge of full operation, say within a few weeks. It may be mentioned that frequently of late there has been 72-hour "foundry" coke offered in the market. It may not be altogether the best selection, but as long as it is offered to foundries it comes under the $7 set price, whereas if offered to furnaces it could only be at $6.

Pig Iron Production

Official statistics just issued show the output of pig iron in the United States in 1917 to have been 38,647,397 gross tons, a decrease of 787,400 tons from the 39,434,797 tons produced in 1916, the record year. There was more furnace capacity available in 1917, on account of new construction, and the restriction in output was due almost wholly to shortage of coke. Capacity at present may be estimated at nearly if not quite 43,000,000 tons. Output in the first quarter of this year may be estimated at between 30,000,000 and 31,000,000 tons a year, but the rate now is much heavier than the rate the first nine or ten weeks of the year.

Lake Superior Iron Ore Movement

Ore producers, lake vessel interests, the railroads and the blast furnaces, are all to co-operate closely in connection with the Lake Superior ore movement this year, the prime essential being to conserve railroad capacity and avoid railroad congestion. Last season the program was to get maximum efficiency from the lake fleet, but the actual experience was that of the railroads serving Lake Erie docks becoming congested, and the docks as well, whereby vessels frequently lost time waiting to be unloaded. The precise requirements of the blast furnaces will be compiled, and no more ore brought down than sufficient. The lake fleet is estimated to have a capacity to move 75,000,000 tons of ore, with no delays at any point, but prospects are it will hardly be called upon to move altogether as much as the 62,498,901 tons it moved last season, this figure excluding the 155,825 tons that was shipped from Key Harbor, on the Canadian side. There were 9,515,221 tons of ore on Lake Erie docks March 1, showing how ore accumulated, and how the railroads are behindhand in clearing the docks for the new lake season. The lake fleet has much more capacity than indicated by the movement last year, partly because there was time lost last year, from the late opening and from vessels waiting to be unloaded, partly because there has been more vessel construction than there has been tonnage lost, and partly, indeed largely, because channels have been dredged so that the draft of the largest vessels will be nearly one foot greater this year.

Market Prospects

Increasing supplies of pig iron and increasing ability to ship finished steel, through the railroads getting in better shape, with continued absence of heavy commercial demand, apart from war requirements, seem bound to make an easier steel market in future. It is true Government requirements continue heavy, but they are running more to certain descriptions of material, leaving other forms of finished steel in relatively light request, and the steel industry can put no more than so much of its raw steel into each finished form.

WEEKLY PAINT DEPARTMENT

Time to Talk "Paint Up"

This Year Should be Made a Banner Year in the Paint Up, Clean Up and Brighten Up Idea—The Time to Get Started is Now — Advertising Done Now Will Bring Results Later on

SPRING is in the air. With the first warming rays of the sun after it crossed the equator on March 21 the time for pushing spring paint sales is at hand. The bright days and warmer weather instinctively make people turn their thoughts toward spring cleaning. But the hardwareman can do his full share in helping along this movement for spring painting. If he becomes an enthusiast in pressing the sale of his paint he is bound to spread the contagion. One of his selling points this spring should be advocacy on the ground of conservation of existing buildings. If people are not carrying on extensive building operations they should at least preserve their present buildings. New buildings are not going up in large numbers at the present time for the simple reason that building materials are high in price. By that same token the building already in existence becomes a more valuable building. For one could not replace that building at a figure anywhere near the original cost. Building materials have advanced from 40 to 50 per cent. over pre-war prices. They do not seem to offer much chance of declining in price in the near future. One of the leading paint manufacturers of the United States, whose company has branches in Canada, recently asserted his strong belief that prices of all materials, particularly of paints and building materials, are likely to remain high for some time after the war is concluded. He points for confirmation of this opinion to the record of prices following all other great wars. The period immediately following a great war has been one of high prices, he asserts.

PRELIMINARY ADVERTISING

Now that the time is ripe to start a campaign for the spring paint-up dealers should not lose the opportunity to do some preliminary advertising. The most effective way of doing this is to talk with customers when they come to the store for other articles. Interest in the amount of painting they are contemplating this spring will often lead to unearthing a paint prospect. Those who have in a distant sort of way been contemplating some painting during the coming spring will have the matter brought more forcibly to their attention. They will begin to think about it more seriously. It very often happens that a bit of gentle urging will spur the backward prospect into the purchase of paint sooner than he had contemplated himself. Once the ice has been broken in the matter of getting the prospect to think more definitely along the lines of painting it becomes a much easier matter to make the sale. It is always necessary to do this preliminary missionary work with some prospects. There is no reason why these paint sales should be deferred for a day longer than is absolutely necessary. The sooner people get started to think along the lines of buying paint the sooner will they buy paint. Once the idea has taken hold of the community it will be contagious. The hardwareman who has been doing this advance missionary work along salesmanship lines is the one who stands the best chance of getting the biggest trade.

GET OUT PAINT DISPLAY

Some hardwaremen keep their paint display in a prominent place in their store the year round. Others again shift the stock to a less conspicuous place when the painting season is supposed to be over in the fall. As a matter of fact there is no closed season for painting. Some of the live hardwaremen are finding that they can sell paint throughout the year just as easily as they can in the springtime or in the fall. However, now that spring is here it is a good peg on which to hang the salesman's talk: "Are you going to do any painting this spring?" should be a question that should be posed to every customer that comes into the store.

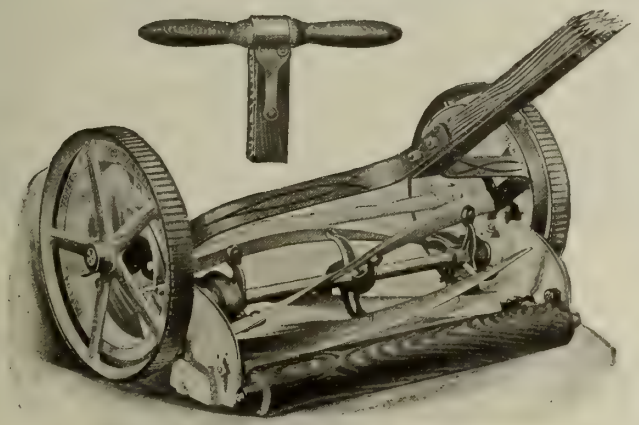
ADVERTISING CAMPAIGN NOW

To those who have not yet moved their stocks into a conspicuous place in the store no time should be lost in getting them so placed. It is time also to plan for the window display. These displays in the interior of the store and in the store windows are all a part of the psychological campaign which should later on result in a good sale of paint. Nor is it well to neglect the newspaper advertising in the local newspaper.

Induce him to decide now

The milder weather with its promise of Spring has Mr. Householder thinking deeply on the paint question. Right now he is making his decision to paint, but he's up against the question of what paint to use.

By judicious window display, counter display and the use of our show cards and shade cards you can induce him to decide to buy Moore's House Colors from you.



When "painting weather" does arrive he'll not hesitate but come right to you with his order—and he'll pass other paint displays that have been made too late.

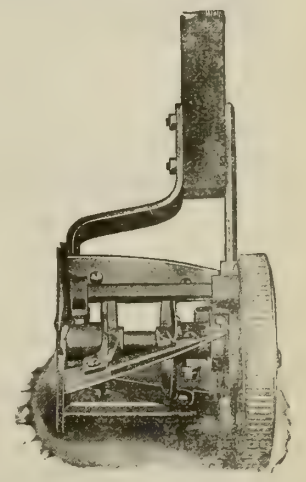
Don't you be late.

BENJAMIN MOORE & CO., LIMITED

WEST TORONTO, ONT.

THE EMPRESS LAWN MOWER

Order your mowers early and don't overlook these supplies:



Lawn Rollers	Lawn Rakes
Turf Edgers	Garden Hose
Weed Cutters	Hose Reels
Garden Shears	Hose Menders
Pruning Shears	Lawn Sprinklers
Garden Trowels	Watering Pots

Consult our catalogue. Mail us your orders and enquiries. OUR SERVICE WILL PLEASE YOU.

The Hum of the Lawn Mower will soon be heard

It won't be long now until the busy householder will be putting his lawn in shape for the summer. He'll want a Lawn Mower and perhaps many other lawn tools from you. IS YOUR STOCK READY FOR HIM?

We offer to our trade, mowers of the highest quality. No other CANADIAN MOWERS enjoy a more favorable reputation than the TAYLOR FORBES LINE. TOWNSEND'S VICTORY MOWERS, "built like a watch," are in a class by themselves.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 28.—There has been less interference with prices this week than last, and while there is a maintenance of the advances made then for white lead and putty other lines are held unchanged. The linseed oil situation is easier but still erratic. Oil is quoted about eight cents lower but will probably continue to fluctuate somewhat. Crushers have been able to work a full 24 hours for several days. The general tone of the market is strong and business is still active, in so far as the assembling and dispatch of booked orders is concerned.

Linseed Oil Fluctuates With Easier Quotations

Montreal.

LINSEED OIL.—Several cars of seed have been received by the different mills this week and these deliveries have been such as to ease the situation. This does not mean that matters have righted themselves, for it will take weeks to do this. The situation looks somewhat better and while congestion is still great and delivery hampered, there will be improvement right along if the weather remains favorable. Prices have eased about eight points from the high mark reached last week and $1.80 is quoted for raw in 1 to 4 barrels. Whether there is enough seed to meet requirements this season cannot be foreseen in view of the fact that no one can yet form an estimate of the probable retail demand for manufactured products. In the markets of the United States there is a firm tendency and some indication of even higher prices.

Linseed Oil—	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 4 barrels	$1.80	$1.82½

Turpentine Easy With Sales Light

Montreal.

TURPENTINE.—There is not a great deal of demand for turpentine yet. As a matter of fact this is not expected to be in evidence for a few weeks, but there will doubtless be a gradual improvement during the coming days. Prices rule easy, with quotations held as given last week. The position in southern points is one of little interest, trading being continued on an easy market.

Turpentine—	Per Imp. gallon
1 to 4 barrel lots	$0.63-$0.68
5 bbls. and over	0.65- 0.69
Small quantities	....- ....

Putty Is Not In Active Market

Montreal.

PUTTY.—There is no further change in the price of putty this week and the volume of trade is limited. There will probably be a better tone to this market in the near future, various quantities being in demand for spring work. However, with a limited amount of building planned this will not be great. Sorting business is real light from the city as well as from the country trade.

	Per 100 lbs.		
Standard Putty—	5 ton	1 ton	Less
Bulk, in barrels	$4.00	$4.15	$4.35
Do., ½ barrels	4.15	4.30	4.50
Do., 100 lb.	4.85	5.00	5.20
Do., 25 lb.	4.85	5.00	5.20
Do., 12½ lb.	5.10	5.25	5.45
3 and 5 lb. tins	6.85	7.00	7.20
1 and 2 lb. tins	7.35	7.50	7.70

Pure linseed oil putty, $2.00 per 100 lb. advance on above prices.

Glaziers' putty—$1.60 per 100 lb. advance on above prices.

Terms: 2%, 15 days, net 60.

White Lead In Oil Is In Fair Demand

Montreal.

WHITE LEAD IN OIL.—There is a fair amount of trade for white lead in oil, taken in the light of spring requirements. Notwithstanding its high price, the trade has placed a fair amount of orders. What is moving at the present time is that being sent forward with spring shipments of paint and kindred lines. Prices are firm at the advances of last week, with ton lots selling at $16 per hundred pounds, smaller lots at $16.35, and the five-ton quantities at $15.50.

Mixed Paint And Specialties Are Firm

Montreal.

MIXED PAINTS, ETC.—There is a steady movement of paint orders outward. The only complaint that is voiced is that of the railway difficulties and these have been rather serious. Better delivery will be probable from now, however, and the companies are doing all they can to facilitate the dispatch of goods. Owing to provision for just such emergencies as a dearth of oil supplies, the paint makers have been able to take care of their customers' wants for paints, etc. Prices are firm on all lines and without change. It is possible that some price revision upward may be considered.

TORONTO

TORONTO, March 28.—Prices on linseed oil have shown considerable variation during the week, at one time quotations showing an 18c differential. This has, however, been overcome and the range has narrowed to 12c or 1c less than that prevailing last week. Movement of seed shows little improvement though the market has been easier during the week. Turpentine has declined from 1c to 3c per gallon, new prices showing a narrower range. In some quarters spring orders continue to be shipped out though business is fairly well cleaned up. A good volume of repeat business is already noticeable and is very encouraging to paint manufacturers. Plate glass is in a very firm market and an advance would not be unlikely.

Linseed Oil Fluctuates Considerably During Week

Toronto.

LINSEED OIL.—Prices in linseed oil during the week have shown wide variation. Early in the week a decline of 5c over lowest prices shown last week was made, revealing a quotation of $1.82 for raw. This has firmed up, however, and prices are now 6c higher at $1.88 per gallon or 1c narrower in range than those of last week. The seed market was erratic in Winnipeg, prices for No. 1 carl flax dropping from $3.97¾ on Thursday of last week to $3.82½ on Monday of this week. Wednesday of this week the price is up to $3.94 or 2c under quotations one week ago. This excitement in seed may have exerted an influence and along with war news of a serious nature resulted in the fluctuations on oil. The range of prices remains at figures given below. Stocks are little improved, the movement of seed being very light.

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.88-$2.00	$1.90½-$2.03
3 to 5 bbls.	.....	.....
6 to 9 bbls.	.....	.....

Less than barrel lots 10c per gallon higher than single barrel price.

Turpentine Declines 3c Gallon; Little Moving

Toronto.

TURPENTINE.—A decline of 3c per gallon is recorded in some quarters in turpentine to reveal quotations generally of 67c per gallon in 1 barrel lots. In others a decline of 1c over former low prices provides for a narrower range

A SURE SIGN OF SPRING

Ramsay's Bill Posters Throughout CANADA

If interested, tear out this page and keep with letters to be answered.

than previously ruling. Stocks are by no means heavy though shipments have reached the city and to this extent eased the shortage formerly existing. Business shows very little improvement though it is hoped the continued fine weather bringing an early spring may bring in orders in increased volume. Quotations continue to be made at 70c gallon in 1 barrel lots by some distributors and today's price range is given below. The primary market is somewhat easier with little interest showing:

	Imp. Gal.
1 barrel	$0.64½-$0.70
2 to 4 barrels	0.63 - 0.69
5 gallon lots	0.69½- 0.80

Some Movement In White Lead In Oil

Toronto.

WHITE LEAD IN OIL.—A slight improvement in the volume of business is apparent during the week but the demand is not yet heavy. Prices established last week, representing a 50c advance, are being firmly maintained, white lead in oil pure in ton lots selling at $16.20 per 100 pounds and less than tons at $16.55. Stocks are heavy and equal to still greater demands.

Mixed Paint Outlook Very Encouraging

Toronto.

MIXED PAINTS.—A good movement in mixed paints is still apparent. Spring orders are being rapidly completed and represent an excellent volume of business. Already mail orders, repeat business, are coming to hand and with the orders being taken by travellers for the various manufacturers, the outlook is described as being very encouraging, Manufacturers seem to feel that the passing of the daylight saving bill will be a factor towards still further demands for paint and retailers will undoubtedly suggest the use of that extra hour in some painting job. Prices remain firm but unchanged and whereas the oil and lead markets are high and might not justify an advance, there seems to be a feeling against such a move for the present at least.

Putty Unchanged; Plate Glass May Go Higher

Toronto.

GLASS, PUTTY. — Although some slight increase in the volume of business being handled is evident, the amount of putty going forward is not considered in any way heavy. Some further improvement is expected but will not reach excessive proportions at this season of the year.

Indications point to an advance in plate glass becoming effective shortly. It was pointed out in HARDWARE AND METAL a couple of weeks ago that higher prices established in the United States on plate would very likely have an effect on the situation here at a little later date. This seems capable of fulfillment in the very near future. Window glass shows no change in price and a fair demand is reported. Stocks though by no means heavy are equal to the demands.

Varnishes Higher; Brushes Moving Freely

Toronto.

VARNISHES, BRUSHES.—A big advance in practically all grades of Harland varnishes has been recorded during the week. This ranges from 25 to 30 per cent. over former quotations and establishes new high levels for this line.

Brushes are holding firm at recent advances and business is reported good. Brush manufacturers indicate that a splendid volume of business is being maintained and jobbers report orders moving out with their spring orders for paints.

ENGLAND AFTER OIL

Active tests to discover oil will be made soon in England with the Government's approval, according to the newspapers. The "Daily Express" says that drilling operations must await the arrival from the United States of machinery ordered last July, but still in storage in New York.

The "Daily Mail" says the Government has accepted an offer from Lord Cowdray, owner of large British petroleum interests, to spend £500.000 ($2,500,000) in drilling for oil in England.

KEEPING AN EYE ON BRAKES

The United States is not overlooking the importance of efficiency from every angle in the motor transport and ambulance division of the army. These machines must stand a wear and tear probably never given to motor-driven vehicles since their births as an established necessity in everyday and international life.

One of the most important factors entering into the final analysis of a motor-truck ambulance which will eventually see service "somewhere in France" is, in the estimation of motor war officers, the efficiency of the brakes. The motors, especially the trucks, must travel a matter of hundreds of miles back and forth from the front amid the most difficult surroundings. It has been stated on authority that for 300 miles up and down the fighting front there is an almost continual stream of trucks, ambulances, couriers and motorcycles running in such close proximity that unless the brakes are in perfect running order hundreds of casualties would result almost daily.

Brakes form only a background for their more important sister, upon whom the real burden rests, that of the brake lining itself. Thousands of miles of brake lining are being used daily by the Government, and owing to this fact Uncle Sam has ordered tests to be made of the various makes. These tests are now going on in Washington.

APPROVE PAINT CHARGES

Announcement is made by Fred H. MacIntire, secretary of the Travelers' Association of Paint and Allied Trades of Pennsylvania, that at the monthly meeting of that body the following resolution was unanimously adopted:

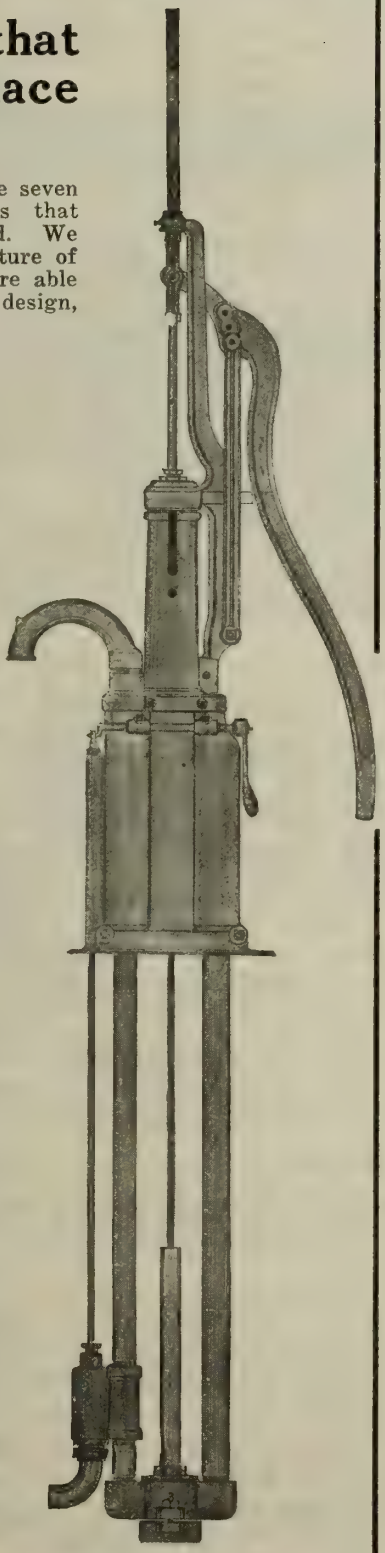
"We deplore the system of graft and prostitution of legitimate business methods recently exposed by your commission and pledge ourselves to aid and assist in any manner possible your efforts to root out this evil."

Reference was made recently in HARDWARE AND METAL to the charges preferred by the Federal Trade Commission of the United States against some thirty-four varnish companies, some of whom have branches in Canada.

NEW BUREAU OF STATISTICS

Hon. C. J. Doherty has given notice of a resolution providing for the creation by the Minister of Trade and Commerce of a Dominion Bureau of Statistics to be called the Dominion Bureau of Statistics to collect and compile all statistical information relative to the commercial, social, economic and general activities and conditions of the people of Canada. Provision is also made for the appointment of an officer to be called the Dominion statistician, to have control over the new bureau, which will collaborate with all Government departments in the compilation and publication of statistical records of administration and at intervals take the census of Canada.

GROWTH OF STANLEY WORKS DURING 1917



The total area of land owned and occupied in New Britain by the Stanley Works on January 1, 1917, was about 33 acres. During last year 61 acres were added to the New Britain plant, making 94 acres in all. Because of this large increase in land changes were necessary in the transportation facilities. The Stanley Works now has four electric storage battery locomotives and the fifth is on its way. Two large buildings were put up during 1917, one at the extreme east end of the plant which almost doubled the Stanley Works' warehouse facilities, and a factory building at the west end of the plant.

ASKS FOR BIDS ON NAILS

Another interesting development of the regulated price situation is the request for competitive bids by the War Department for 30,000 kegs of wire nails, says the Iron Trade Review. Accompanying the proposal is the statement that the 3.50c maximum price on nails is only a recommended one, and has had no Presidential confirmation. This position parallels that taken by the Navy Department when it was able recently to bring out competitive bids on certain lines below the so-called official levels.

BT Ready-to-Ship Pumps

"7 Pumps that take the place of 700"

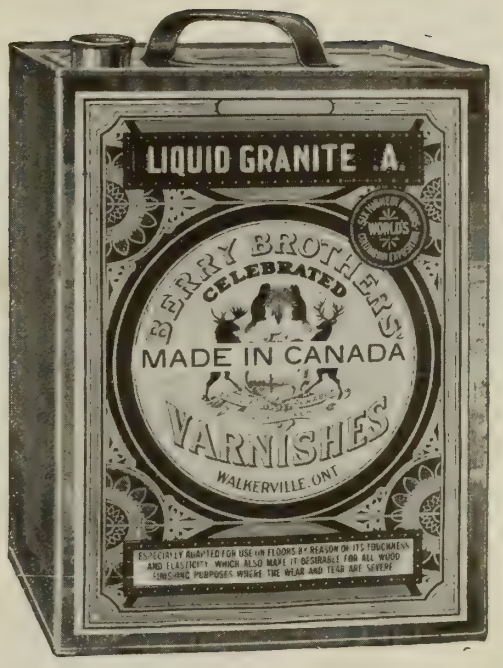
The BT line of pumps are seven in number—seven pumps that meet with every demand. We specialize in the manufacture of these seven pumps and are able to produce them better in design, better in workmanship and better in price than any other pumps of their kind. BT Pumps are Ready to Ship, Ready to Sell, and practically Ready to Install. Used for house or barn, engine or wind-mill, outside cisterns, shallow wells and deep wells.

EASY TO HANDLE. You can buy and stock and sell them as you please—the service we give you makes the selling easy and convenient.

Pump Cylinders

Our **Ready-to-Ship** idea changed our cylinder variety from 10,904,000, to just 67 different styles. The change has proven a benefit to us, the dealer and consumer. We are now making them better and cheaper and selling them for less money.

Pump Leathers



B T Pump Leathers are cut, formed and finished with the greatest care. Only best portions of hides are used. They will keep in stock for years without deterioration.

Our catalog will explain thoroughly the advantages you derive from selling B T Ready-to-Ship Pumps, Pump Cylinders and Pump Leathers. Write for it.

Buy now for summer business—scarcity of raw material will likely cause prices to go up. Quick deliveries.

We Manufacture Wire Solder

We make wire solder of any desired composition or size (guaranteeing the mixture to be exactly as represented) and for any gauge or size. It is made by our improved hydraulic process, which not only insures absolute uniformity in composition, but makes the wire perfectly smooth and of an even size throughout its entire length.

When not otherwise specified we send No. 8 gauge.

"No, Sir," said Graydon

GRAYDON is a hardware dealer. He said, "No, Sir," to a traveller who had asked five minutes of his time in which to demonstrate a new incubator that the M—— Mfg. Co. were putting on the market. "No, I don't know your firm," Mr. Graydon continued in a chilling tone that matched the winter weather without, "I have never heard of it before nor of your incubator, and I have no time just now to listen to you."

But the traveller persisted, asking, "How, then, am I to make the merits of our incubator known to you if you won't take time to hear my explanation?"

"Well, I'll answer that question, since you ask me," replied the dealer in a more genial tone. "Your firm should advertise your incubator in the trade paper that all we hardware men read every week, Hardware and Metal. They should keep on advertising it until we have had time to gain the main points about it and have become sufficiently interested to want to sell the line. Then you could call, talk prices, etc., and little time would be wasted. You know merchants nowadays, because of scarcity of clerk help, have very little time to give to travellers. You should get your firm to do its missionary work in advance through the trade papers. That's the way to save our time and yours, too."

This is what Ross of Lucan, wrote the manager of DRY GOODS REVIEW

J. M. Ross & Co., General Merchants, Lucan, Ont.—The fact that we have been subscribers for THE REVIEW for over ten years is sufficient evidence of our appreciation of its value to us.

Our staff takes advantage of many valuable suggestions appearing monthly.

We see advertisements of certain classes of merchandise that would escape our attention if it were not for THE REVIEW.

Our mail usually consists of 50 per cent. circulars and booklets that find their way to the baler without being read. Were they consolidated with all the interesting matter found in the columns of THE REVIEW, they would not only come under the observation of the retailers but the members of their staff as well and we are sure better results would be obtained.

$300-$1,200 a year to back up and prepare for traveller's calls, when worked down to lowest terms, becomes a very small sum.

Spending	To support the solicitation work of	Means in a year
$300	5 travellers	$60 per traveller or $5 a month
$600	10 "	$60 " " $5 "
$1,200	12 "	$100 " " $8.33 "

A traveller will make probably 125 calls in a month. So it works out about 4c-7c a call to support him. His actual call (salary and expenses) probably cost the firm on an average $2. That is to send a man out will cost, for his salary and expenses quite $10 a day. We suggest that, in McCurdy's case above, an extra $1 spent on making known his incubator and the firm making it would have been well spent money.

Besides which one must take into consideration the resultful influence of advertising on firms travellers never call on and whose business must be courted by advertising.

To spend $300-$1,200 a year for an all-the-year-round campaign of page spaces in one or other of the following retailers' newspapers is cheap business insurance:

CANADIAN GROCER	(Weekly)
HARDWARE AND METAL	(Weekly)
DRY GOODS REVIEW	(Monthly)
MEN'S WEAR REVIEW	(Monthly)
BOOKSELLER AND STATIONER	(Monthly)
SANITARY ENGINEER	(Semi-Monthly)

Keep a page advertisement in the business paper your customer and wanted customer read. Your travellers will get business more easily, and the $10 or so a day it costs to keep them out will be getting you bigger orders.

Send for copies, etc., of the above-named retailers' newspapers. Find what firms are using them and how they are using them, and study the papers on their editorial side, observing their downright money value to retailers; addressing the publishers.

What will Spring mean to *your* Paint Sales

?

To Stephens' Agents everywhere each succeeding Spring means a greater paint turnover than ever before.

That's the way Stephens' Paints benefit the dealer—the good effect of supplying these paints that live up to their guarantee is cumulative.

Stephens

Year after year sales increase in volume. Customers perfectly satisfied the previous season come again to ask for Stephens' Paints. They're settled on the paint question—perfectly assured by experience that Stephens' Paints are every whit as perfect as they're guaranteed to be.

If you are not satisfied with your paint prospects for this Spring, if you feel that your increase will not be as great as you deserve, get in touch with us without delay. Let us explain our proposition and tell you what it is doing for other Dealers.

ANNOUNCEMENT

ON THE OPENING OF A COMPLETE AUTO ACCESSORY DEPARTMENT BY THE GREAT WEST ELECTRIC COMPANY, LIMITED, WINNIPEG

OUR experience with a limited number of Auto Accessories has led us to believe that our trained organization can give Western Canada an improved service in these lines. With this end in view, we have opened a new department that will be devoted entirely to Auto Accessories. This new department will be in charge of men of wide experience in this class of business—men who know what to buy—and where, and how to give you the very best service. The stock we will carry for immediate shipment will be just as complete as that we have always carried in Electric Supplies, and the service will be just as prompt and satisfactory. You who have learned the value of the service we give will not hesitate to use the new department. From you who have not yet become acquainted we ask a trial order. We will take pride in pleasing you.

Distributors of Laco, Tungsten and Nitro Lamps

MADE IN CANADA

BUFFALO OILS

These are a few of our most staple lines, so well and favorably known throughout Western Canada, and are sold only through reliable merchants.

HARNESS OIL
NEATSFOOT OIL

Special Cylinder Oil (for steam engines).
A Gas Engine Oil (for gasoline engines).
Tractorlene Oil (for oil burning engines).
Ideal Thresher's Machines Oil (for general use).
Automobile Oil and Transmission Greases.

PRAIRIE CITY OIL COMPANY, LIMITED, WINNIPEG

Consult Hardware and Metal Buyers' Guide

If what you want isn't advertised in this issue, consult our Buyers' Directory. If it isn't listed in our Directory, write us and we will give you the information.

THE BUYERS' GUIDE

If what you want is not here, write us, and we will tell you where to get it. Let us suggest that you consult also the advertisers' index facing the inside back cover, after having secured advertisers' names from this directory. The information you may desire may be found in the advertising pages. This department is maintained for the benefit and convenience of our readers. The insertion of advertisers' headings is gladly undertaken, but does not become part of any advertising contract.

Imports may be restricted from States

American made luxuries may not be allowed into Canada—Business Must be prepared for Adjustments.

"Relations with the United States are a vital factor in the business situation at the present time. The exchange problem has become one which is receiving the serious consideration of the Government."

Late reports from Ottawa indicate that in order to right our balance of trade, steps may be taken to curtail shipments of luxuries from the States into Canada.

Canada's Dollar at a Discount

These important points are from the front page of THE FINANCIAL POST this week. In another important article on the same page the statement is made that a minus balance of 428 million dollars is a prime cause for the existing heavy discount on the Canadian Dollar in the United States. In both articles, and in many other important business articles in THE FINANCIAL POST this week, the inevitable need for far-reaching readjustments in business, and the paramount necessity for more production in the Dominion are emphasized. For the business man anxious to keep pace with and profit by the unusual and rapid developments now taking place THE FINANCIAL POST at $3.00 per year, is the right paper to read.

Business News of the Week

In this week's issue of THE FINANCIAL POST you will find in addition to the important matters mentioned above, these other business news articles. All are written to give you the most and latest facts quickly and with the least effort in reading. These are merely a few of the news matters dealt with:

Would Scrap Management of Toronto Rail's Big Profits for Canadian Car Co. This Year
C.P.R. Assets Pass Billion Dollar Mark
Farm Products Are on Higher Price Levels
Eastern Steel Made No Profit on Munitions
Developments re the Dominion Permanent
Supremacy of the Bank of Montreal Maintained
Bank Clearings Show Improvement
Bank Plans re Conscription Being Discussed
Edmonton Not Allowed to Recalculate Sinking Fund
Winnipeg Rails Showed Only 1 Per Cent. on Common

The business man able to give an opinion from knowledge of the facts of these matters and many others of immediate business interest which are contained in this week's FINANCIAL POST would be recognized at once as an alert man of affairs. You can be that man every week in the year if you take the right step now by signing this order for THE FINANCIAL POST:

The MacLean Publishing Co.,
153 University Ave., Toronto.

Send me THE FINANCIAL POST each week till further ordered. I will send subscription price ($3.00 per year) on receipt of bill, or you may draw on me for this.

MYERS COG GEAR HOUSE PUMPS

Do you know that these pumps operate 33 1/3 per cent. easier than the ordinary house pump, have much larger capacity and are better built than most others?

They are neat of design, nicely finished and harmonize with any surroundings. Several styles and sizes with brass, brass-lined or polished cylinders. Circulars show them in actual colors and give prices. Write.

Mr. Hardwareman

Have you ever considered the advantages of advertising your wants in HARDWARE AND METAL? One of the most important of these is the fact that there is no waste circulation. HARDWARE AND METAL goes only to the people who are directly interested in the trade. We have offices in Montreal, Toronto, and Winnipeg. If you like you can have a box number in care of either one of these offices, whichever is nearest to you. We will then notify our representative there and he will promptly forward any replies which may come in answer to your ad. Remember, Thursday noon is the latest for receiving want ads for the current issue.

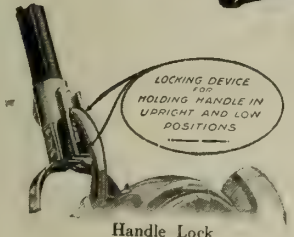
Mr. Dealer—

Prepare for the House-Cleaning Season



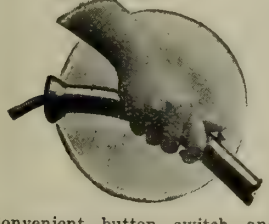
EUREKA Electric Vacuum Cleaner

was awarded the Grand Prize by a Jury of Electrical Experts at the Panama Pacific International Exposition, San Francisco. EUREKA, the one best in competition with eighteen other makes.

EUREKA cleans mattresses perfectly

THE EUREKA ELECTRIC VACUUM CLEANER excels in all requirements of high grade suction and great air displacement. Removes the maximum of dirt from the surface in the fabric, underneath carpet and rugs, without rubbing.

Handle Lock



New EUREKA Locking Handle very durable and efficient, (patent applied for).

THE EUREKA ELECTRIC VACUUM CLEANER possesses exclusive and convenient features, such as the "Eureka" Handle Lock, "Eureka" Button Switch and "Eureka" hose attachment, that are not to be found in any other similar make of Vacuum cleaner.

Cleaning portieres

The nozzle, motor and blower frames are made in aluminum alloy of high grade finish. The compactness and lightness of the Eureka makes it most convenient to use.

Convenient button switch and cord protecting knob, (patent applied for).

THE EUREKA ELECTRIC VACUUM CLEANER comes complete with a handy set of attachments for cleaning portieres, upholstery, etc.

Write our nearest house for attractive literature and prices.

"We Are Oversold"

ONCE upon a time a certain manufacturer was urged by his retailers to cut out his advertising in consumer mediums because it was embarrassing them. This manufacturer was disposed to listen to his retailers because his product was heavily oversold. He half-welcomed the chance to save the money he was spending on consumer advertising in national mediums.

So he cut out his consumer advertising.

Then arose a competitor—a new man in the field. He went to the retail trade and got orders easily, for he was in a position to make immediate deliveries. He made a good article, and it was a "cinch" to open up connections with the retail trade. He got in strong and permanently, and to-day he is a formidable rival to the manufacturer who ceased his selling propaganda.

That oversold manufacturer admits that he has had a lesson for life. If retailers were to say to him to-day —"Please cut out your consumer advertising. You can't meet the demand you have created and the public's insistence for your article is causing us to lose sales"—if retailers said this, and they have said it, this manufacturer has his reply all ready. It is— "Never again! I stopped once, and I opened the door to a new maker. It has cost me many times what I thought I was saving to hold my own and to recover what I lost. I learned something three years ago when I yielded to the temptation to cut out my consumer advertising, and in future I'll keep on advertising to the public even though I may find myself heavily oversold."

To-day hundreds of manufacturers are oversold. Some have cut out their consumer advertising. Some have kept up their publicity campaign with little or no diminishment. These consistent and persistent advertisers are not regretting their policy. Some of the others are, and they admit freely their error. They are finding that the lost momentum and the new competition which has arisen will require a doubling and tripling of future advertising and selling effort to get back to old positions.

When war contracts were easy to get and looked plums, many manufacturers dropped making their usual line and went in for the fortunes which they thought could be made in a few months. If you ask some of these manufacturers to-day what they think of their cessation of making their usual line for which a big consumer demand had been created at great cost by national advertising, and which retailers were glad to distribute, because selling it was easy, you will be told by those frank enough to make honest confessions, "We made a mistake. We are finding it harder now to get back to our old place with the retailers and the public. We have lost ground. We regret the mistake we made. It will cost us much money to get back again, and in the meantime retailers and the public have learned to buy others' merchandise."

IF the firms who are oversold, and the firms who have lost something of value because of the stoppage of their advertising, find in the foregoing any message to them, let us say to them that they can do influential advertising of a national sort, effective on both consumers and distributors, by the use of two national mediums—MACLEAN'S MAGAZINE and FARMERS' MAGAZINE. The cost of strong campaigns in each of these magazines, and in them both, is as follows:—

	Circulation	Number of of issues per year	Minimum page rate	Cost of page in every issue
MACLEAN'S MAGAZINE ..	55,000	12	$147.00	$1,764.00
FARMERS' MAGAZINE	30,000	24	75.60	1,814.40
Both Magazines	85,000	36	$222.60	$3,578.40

It means about $300 per month to cover urban and rural Canada. Let it be remembered that 85,000 circulation in Canada is the equivalent of 1,700,000 in the United States with its 20-times larger English-speaking population. That is, using MACLEAN'S and FARMERS' in combination gives an advertiser a circulation in Canada comparable to that of the *Saturday Evening Post* and with that of the *Ladies' Home Journal* in the United States.

We invite correspondence from all oversold manufacturers and others who want to break back into the public's favor. We would like the privilege—and solicit it—of talking over with them the whole matter of national advertising, looking forward to the preparation of a specific proposal based on their own special problems and conditions. And so we ask you to address a letter of enquiry to the General Manager of

The MacLean Publishing Co., Ltd., Toronto, Canada

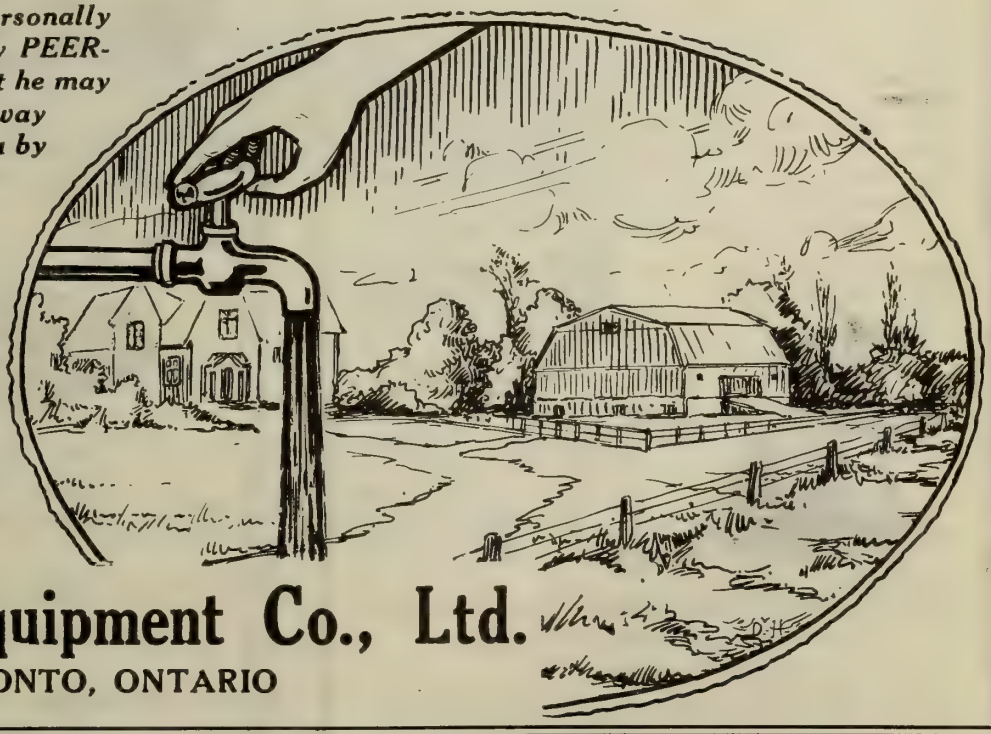
WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

NOW THAT Mr. FARMER HAS THE MONEY

He is going to gratify that old, old desire for running water in the house and barn. He is going to put in a "regular" bath-room, and a nice white sink in the kitchen.

Maybe he hasn't decided, but his wife and the girls are working overtime on the job. They may be inquiring in the City, under the impression that you do not do that kind of work. Hadn't you better run out and see them, taking with you your catalogues and price lists of plumbing supplies and PEERLESS WATER SYSTEMS.



He'll want to know particularly about

Peerless Water Systems

Tell him *—that the PEERLESS Line is made right here in Canada. (And that it's the only one that is.) That it's fully guaranteed by a firm that practically doubles their output every year.*

That we will send him personally a guarantee covering any PEERLESS EQUIPMENT that he may buy, and if there is any way in which we can help you by supplying information or writing him personally, we will be glad to do it.

If you want some bulletins or information forms, drop us a card. Our interests are mutual, and we want to co-operate with you.

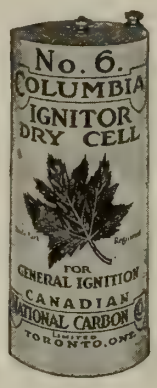
Complies with the Law— Gives better light

The "Dominion Lenz" appeals to motorists because besides complying strictly with the Anti-glare Headlight Laws it diffuses a softer, brighter light.

"Dominion Lenz" breaks up the direct rays of light, eliminating the glare, and at the same time improving the illumination. Objects on the road ahead are not surrounded by glare, but are clearly distinguishable against a background of clear, white light.

It won't take much persuasion to convince your motor-owning customer that the lens that meets the legal requirements, and gives a better light, is the best for their cars.

Ford Car size retails at $3.00.



FACTORY PRODUCTS LIMITED

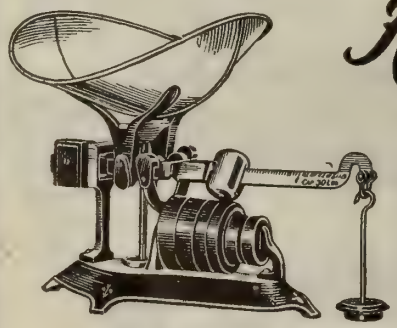
Columbia Batteries for Service



For quick, sharp action recommend Columbia Batteries. These perfectly made, perfectly insulated dry cells give a fast, clean cut response and stand up well under heavy working conditions. Where heavy, intermittent service is demanded, as for auto starting and ignition, Columbia Multiples will be found most effective. These are groups of cells permanently connected by soldered brass strips with only two connections to be made.

Ask us for more particulars.

The Dispute Settler

Here is a scale that captures confidence the minute you show it. And confidence "sells goods." In a dispute over correct weights, for instance, the owner of a Renfrew can defend its accuracy against any other scale, no matter how elaborate. The Government Inspector's Certificate, accompanying every Renfrew, is indisputable evidence of accuracy in every weight from ½ oz. to 30 lbs. That is one reason why the Renfrew sells like everything, these days. The housewife is ferreting out every leak due to honest mistakes in weighing. Get the

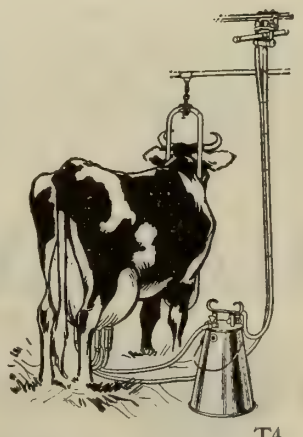
Dealer Profits

Do you know that Milking Machines are being sold in great numbers? Do you realize that there are a number of dealers making big money right now selling Sharples Milkers?

The high price of milk products and the scarcity of farm labor have compelled many a farmer to think of a Milker who has never thought of it before. The cows must be milked. Yet, so scarce has help become that many of the farmers simply can't milk their cows unless they buy a Milking Machine.

There is an opportunity for good money in this business right around you—more money than you are making on most lines you are selling.



SHARPLES MILKER

is the best Milker for you to sell because it is the best Milker for the farmer to use:

1. It is the world's fastest Milker
2. It is the only Milker that can be adjusted to each individual cow
3. It is the only Milker with a positive squeeze
4. It is the only Milker that all other concerns try to imitate
5. It is used on half a million cows daily
6. It is the Milker that will make you the most money

We will be glad to explain our Milker proposition in detail. If you have the time and wish to make a great deal of money, write us at once; it will not obligate you.

The above is an exact reproduction of a few of the Bonus Checks paid our dealers. They are only three of our many dealers to whom we paid in the aggregate nearly $100,000 in Bonuses last year. This is *in addition* to our Regular Discounts. Write and ask them what they think of the Milker business.

The Life of the Ad

THE retailers who are securing best results from their newspaper advertising are those who are using illustrations in their advertisements. Just as a mail order catalog would be dead without illustrations, so is the average consumer advertisement when illustrations are omitted.

Canadian retail hardware merchants can secure attractive illustrations through HARDWARE AND METAL'S Electro Service. Mounted electros are supplied at a cost of 20c each. Booklet showing 365 electros will be supplied on request. Address below.

HARDWARE AND METAL

CANADA'S NATIONAL HARDWARE WEEKLY

143-153 University Avenue, Toronto, Canada

"Say, Boss! Here's Another of Those Pratt & Lambert Full-Page "Post" Ads!"

IT'S only on the day the advertisement comes out that you Pratt & Lambert Dealers feel that real thrill of partnership in a big proposition. But the influence of it is going on all the time. In two million homes Thursday is "Post" day; and there, around the library table, the influence of these big Pratt & Lambert advertisements makes itself felt. Sometimes perchance, it falls on fertile ground — a varnish job is just ready to be done, and some dealer, somewhere, sells "61" Floor Varnish. Sometimes it produces more slowly, perhaps in a month or a year. But Pratt & Lambert advertising isn't an *advertisement;* it's an *influence* which has been created by the *hundreds* of different advertisements that have appeared in the last ten years. As an example, look at the

FULL-PAGE PRATT & LAMBERT ADVERTISEMENT IN THE SATURDAY EVENING POST ISSUE OF MARCH 30TH

But this is only one of many; there are full pages also in the American Magazine, Country Life in America and House Beautiful, and a series of large space advertisements in the Ladies' Home Journal. All of these advertisements are hammering one single vital fact—the durability of "61" Floor Varnish. However, ten years' experience has proved that by this forceful, perpetual, consistent devotion to a single advertising idea, the whole Pratt & Lambert proposition benefits — *and the dealers, who handle the P&L line, benefit most of all.*

You should handle the P&L line. Think it over. Ask P&L dealers what they think of it, and when you get their answer, realize and consider that they were once "almost persuaded", just as you are.

Then write for the Pratt & Lambert Dealer Proposition.

Made in Canada

Conservation of Food

DOMESTIC ECONOMY is impossible without FRUIT JARS.

This is fully recognised by all Authorities interested in FOOD CONSERVATION and their PUBLICITY CAMPAIGN will undoubtedly stimulate the use of JARS this year and create a demand far above normal. RETAILERS should be ready to do their part by having JARS on hand when required.

REQUIREMENTS should be carefully considered and orders placed with WHOLESALERS as early as possible.

LATE ORDERS may not ensure delivery in time to meet the requirements of the PUBLIC.

NO FRUIT or vegetables should be wasted this year for want of JARS.

Ask your Wholesaler for JARS "MADE IN CANADA" and guaranteed by a reliable manufacturer.

SITUATIONS VACANT

WANTED — HARDWARE CLERK, ONE OR two years' experience; state salary. Box 391, Hardware and Metal.

WANTED—TINSMITH FOR COUNTRY SHOP —must be competent, reliable, exempt from military service. Good salary paid to right man. Apply Drawer A, Rocanville, Sask.

THOROUGH HARDWARE MAN OR LADY capable of taking charge of all office work. Reply, stating full particulars, Box 380, Hardware and Metal.

WANTED—2 LIVE SALESMEN — ONE AS manager of department carrying electrical supplies, fixtures, mantels, grates, tiling, etc. Would also have charge of department carrying linoleum, wagons, toys, washing machines, household goods, etc. Must be good salesman and capable of managing department. Would have two or three helpers and in addition would have under his control two or three electricians.

The second salesman should have good knowledge of house furnishings, including enamelware, kitchen ware, house furnishing goods, etc.

These openings in one of Ontario's best city stores. Apply giving all details. Box 396, Hardware and Metal.

WANTED

WANTED—HARDWARE BUSINESS — STOCK not too large. Must be clean and up-to-date. Box 397, Hardware and Metal.

MISCELLANEOUS

STOVE REPAIRS FOR GARLANDS, PEN Esthers, Acmes, Sunlights, Silver Kings, Souvenirs, Welcomes, and all kinds of ranges. Write for list and prices. Grundy Bros., Strathroy.

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

FOR SALE

HARDWARE BUSINESS FOR SALE—SOUTHwestern Ontario. Nice clean stock, about $8,000. Owner in poor health. Apply Box 386, Hardware and Metal.

HARDWARE STOCK AND BUSINESS FOR sale in live town of 800. First-class farmers' trade. Hydro just coming in. Apply Box 360, Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN large Eastern Ontario city; stock about $8,000.00. Price right for quick sale. Box 361, Hardware and Metal.

FOR SALE—BUILDING AND HARDWARE stock in good live Saskatchewan village. Stock on hand about $6,000. Living rooms above. Good opportunity and terms for right man. Box 726, Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN good Western Ontario city; stock five thousand; paying business; act quick. Box 365, Hardware and Metal.

HARDWARE BUSINESS FOR SALE—IN A Northern Ontario town of 8,000 population. Stock of shelf and heavy hardware, in excellent condition. Stock can be reduced to about $15,000.00. Will sell or lease premises. Owner has been in business over twenty-five years and wants to retire. Box 730, Hardware and Metal, Toronto, Ont.

WELL ESTABLISHED RETAIL BUSINESS and buildings for sale—in Western Ontario town, of population 835. Stock about $38,000.00, consisting of shelf and heavy hardware, furniture, groceries, crockery, tinware and graniteware, harness, wallpaper, tinshop and plumbing. Been in business 28 years. Good reasons for selling. Apply Box 382, Hardware and Metal.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

SITUATIONS WANTED

MARRIED MAN, 40 YEARS OLD, SEEKS position in retail hardware store. Several years experience. To begin about April 15th. Saskatchewan or Alberta preferred. Box 393, Hardware and Metal.

UP-TO-DATE, THOROUGHLY EXPERIENCED hardware salesman, capable of taking charge, desires position where there is room for advancement. Best references. Percy E. Paddick, Florence, Ont.

WANTED—POSITION AS HARDWARE MANager or head salesman by discharged soldier. Was in business in town in Western Ontario before enlisting. Excellent references. Box 395 Hardware and Metal.

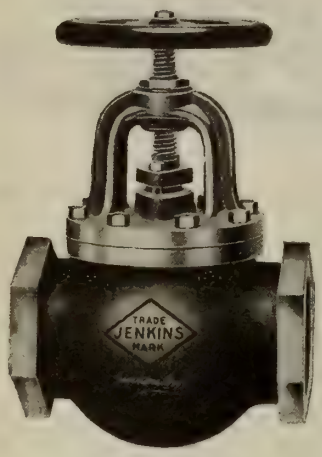

FIG. 141
JENKINS BROS.
Standard Pattern Iron Body Globe Valve Screwed with Yoke.

For use under steam service there are no valves quite as satisfactory as

JENKINS BROS.
Globe and Angle Valves
Fitted with Jenkins' No. 119 Discs

The composition of the disc is very hard, but becomes tough and flexible in service when under steam pressure.

It shows remarkable freedom from cracking and flaking and unrivalled durability in working steam pressures up to 150 pounds.

Write for Catalogue No. 8.

103 St. Remi St. **JENKINS BROS., Limited** MONTREAL

WANTED, AT ONCE — CAPABLE HARDware man to manage retail hardware business in thriving Ontario town. State experience, salary expected, and give references. Apply Box 182, Hardware and Metal.

Men who are capable of managing a retail hardware business are not easy to find. The position requires a high type of ability. Above all, it requires a man who recognizes opportunities and who knows how to make the most of them. That type of man in the hardware business is almost invariably a reader of HARDWARE AND METAL. There were fifteen replies to the advertisement shown here. It was a point in favor of all the applicants that they were in the habit of reading HARDWARE AND METAL.

USE THE WANT AD PAGE

"HENDRYX"

STANDARD STEEL AND BRASS CHAINS

MR. CHAIN USER: August, 1917.

For many years we have made a specialty of chain for manufacturer's use, and are well equipped for this business.

Our chain is made of special wire found by us to be best suited for the purpose. The links are well shaped, small and compact, making a heavy, strong chain.

A sample mailed to us of what you may need will be given immediate attention, and interesting prices quoted on any quantity.

Yours very truly,

The Andrew B. Hendryx Company, New Haven, Conn.

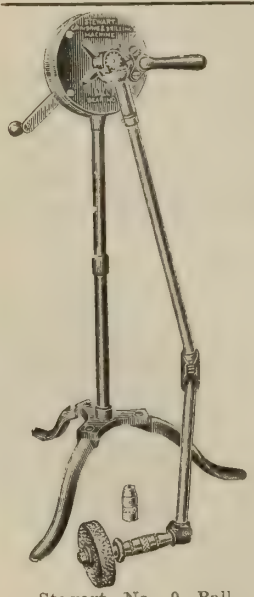
Goods Every Dealer Should Stock Now

In Big Demand—Quick Sales—Good Profits.
They Never Fail to Please and Stay Sold.

Stewart No. 1 Ball Bearing Horse Clipping Machine. Retail price, $11.00.



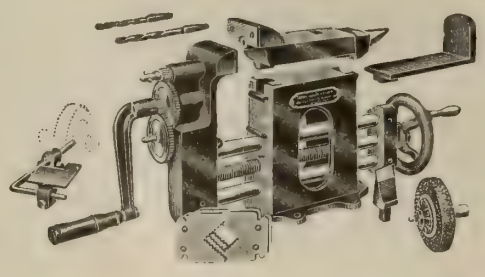
Right Now Is the Time for Stewart Horse Clipping Machines

Horse clipping is just starting with the first days of spring weather, and during the next five or six weeks there will be a number of Stewart No. 1 Ball Bearing Machines sold in your locality.

The way for you to get the cream of this business is to not only stock but display them.

If you haven't the Stewart No. 1 Machine in stock, order from your jobber at once. Sales are certain—you can't miss it.

This machine is being purchased extensively for clipping the udders and flanks of dairy cows.



Stewart No. 9 Ball Bearing Shearing Machine. Retail price, $17.00.

Every Sheep Owner Needs a Stewart Shearing Machine—Will Immediately Pay for Itself

Wool now is worth a lot of money, and the additional amount obtained from a few sheep with a Stewart Machine over hand-shearing will **pay** for a No. 9, which is our latest and best hand-operated machine.

The No. 9 gets about a pound of wool more from each sheep that the hand blades leave, to say nothing in the saving of time and labor and elimination of all cuts.

Showing the No. 9 Machine now means immediate sales. Order at once from your jobber.

The Big Six-in-One Tool

Rising Costs Attack Profits

More than Ever Before Merchants Must Guard Every Cent of Profit

MERCHANTS today are face to face with several difficult problems, the most important of which is the rising cost of merchandise.

In many instances these rising costs are hard to pass on to the customer.

Consequently the merchant's margin of profit is lessened.

Merchants find the use of a National Cash Register helps greatly in solving this serious problem.

It safeguards every cent of profit that they can make.

It conserves their profit by preventing losses, by eliminating mistakes in change, by recording all charge transactions.

It reduces overhead by making clerks more efficient, speeding up store service, reducing the number of clerks required and the deliveries to be made.

It relieves the merchant of details and worry, giving him more time to consider his purchasing and market problems.

The National Cash Register Co. of Canada, Limited, Toronto.

The National Cash Register Co. of Canada, Limited, Toronto, Ont.

Please send me full particulars of your latest model cash register and tell me how it will help me in my business.

Making the Garage Door Harmless

National No. 810 Garage Door Holder is a simple, effective means of preventing damage to cars from swinging garage doors.

When the door is closed the holder is folded back out of the way along the head jamb. As door is opened the long U-shaped steel arm slides through the embossed steel catch plate and engages two notches in the end of the arm. To close the door a light pull on the safety chain operates the trip bar and releases the holder.

Simple to install, always effective, nothing to get out of order.

Packed one pair in a box complete with screws, in the following finishes: Japan, Dead Black Japan, Sherardized and Sherardized and Dead Black Japan.

Weight per pair, 6¼ lbs.

LITTLE WORDS WITH BIG MEANING

Quality

According to "Webster," Quality is "an excellence of character; natural superiority."

Service

Webster's definition of "Service" is; "The performance of labor for the benefit of another."

We use these words advisedly—fully understanding their definitions—and realizing the obligation we place upon ourselves by their continued use in connection with our products of Iron and Steel, and our attitude to the people we serve.

Make YOUR Window SELL Rope

Rope is a staple commodity. It is used for some one or more purposes every day. That is why an attractive window display of Plymouth Rope is sure to **draw** people to your store and **hold** them.

We emphasize **draw** and **hold** because the name Plymouth as applied to cordage has an advertising value which no other brand of rope possesses. Plymouth Rope has been in the public mind for 94 years. The time that

Plymouth Rope

has been on the market is very important—you are not asking customers to try an unknown or untested product.

Therefore, when you display Plymouth Rope in your store window the window signs themselves have, because of a world-wide known name, a certain attention compelling value.

It is up to Plymouth Cordage Products to make the sale. They usually "do" it. The do is the reason so many thousands of dealers are selling Plymouth Rope.

If you want to see window displays that have actually sold "Plymouth"—send for the book—"Plymouth Rope Window Displays." It will show you how to make them.

The Mark That Stands For The Best in Rope

We'll "Do our bit" by furnishing the right kind of signs and other material FREE.

WE PAY YOU TO ADVERTISE OUR GOODS LOCALLY

We advertise regularly in the leading national magazines to increase the demand for sweepers, and to maintain a preference for BISSELL'S sweepers.

We do not expect this advertising to cause droves of people to enter your store insistently demanding a BISSELL—nor will any other "campaign". We do know, however, that this national advertising makes it easier for you to sell them. It is with this realization that we urge you to use the advertising material we furnish as the logical "tie-up" of our advertising in your store—the show cards, display features, newspaper cuts, etc. And besides—

Our Spring Offer tells how Bissell dealers may do some advertising in their local papers, etc., at no expense—to further crystalize the benefits of this national advertising to their own businesses. If you have not received a copy of our Spring Offer Announcement, write for it.

Have You Sold The Hardware Merchant?

THE local hardware merchant exerts a great influence throughout the district in which his store is located. The majority of hardware merchants have been established for many years; they are reputable merchants who have built up their businesses on sound business principles and who have endeavored in every possible way to give the best possible service to their customers and supply them with goods which will give satisfaction. Is it any wonder, therefore, when customers visit the store of a well-known and well-established hardware merchant, that they consider him an authority on lines which he is selling and will usually follow out his recommendation regarding the lines which they wish to buy. Actual investigations have proven that in the majority of cases customers place absolute confidence in the recommendation of their local dealer.

The chief problem, therefore, confronting the manufacturer who wishes to distribute products to the hardware trade or to introduce new lines is to sell the hardware merchant and his sales staff. When you sell the hardware merchant and his salesmen on your line you can rest assured that you have then gained the co-operation of the strongest retail selling force in the Dominion.

There is one way in which you can get in touch with this vast army of hardware buyers and salesmen in a most thorough manner and at a most moderate cost. Over 90% of the retail hardware merchants from coast to coast read a weekly hardware trade paper and they read HARDWARE AND METAL.

CARTER'S

Made in Canada

Genuine Dry Red Lead from Canadian Pig Lead

Is needed by Color Makers, Varnish Makers, Rubber Makers, Paper Makers, Bridge Builders, Painters and all Steel and Iron Workers.

It is the best paint that can be supplied to prevent rust and corrosion.

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

Stirs up Business

Precious few housewives realize the many uses of an accurate scale in the kitchen—saving losses in careless weighing at butchers and grocers—weighing produce before marketing—weighing flour and other ingredients while baking, etc., etc., etc. It is surprising what a little bit of salesmanship and displaying will accomplish in stirring up big business in Renfrew Scales! The Renfrew is compact, handy, and stands hard knocks. It doesn't get out of order and always tells the truth. A government inspector's certificate accompanies every Renfrew. These features make the Renfrew a lively seller these days. Push business with the

"Railroad Special" Wrenches

This is the strongest and best HEAVY DUTY Wrench made. Head and Bar Drop Forged in one piece from selected steel. Extra heavy jaws thoroughly case-hardened. Indestructible iron handle. FITTED WITH "W & B" EASY ACTING SCREW.

Machinists' Knife Handle Wrenches

This is the best wrench of its type on the market. With the exception of the difference in the handle it is practically the same as the "Railroad Special" Wrench. FITTED WITH "W & B" EASY ACTING SCREW.

Adopt this established line as your standard CANADIAN MADE WRENCHES.

Complete information and catalog No. 90 on request.

Regular Wrenches

Head and Bar Drop Forged in one piece. FITTED WITH "W & B" EASY ACTING SCREW and thoroughly seasoned handle.

"White"

MOP WRINGERS

EASE OF OPERATION, THEIR GREAT UTILITY AND THEIR SUBSTANTIAL CONSTRUCTION, COMBINED WITH THEIR PRICE, MAKES THE WHITE MOP WRINGER A RAPID SELLER.

Made of malleable iron and the best of hard woods — Maple or Birch. Fits any kind of pail and wrings the mop thoroughly.

It has more than one use —often used for fruit and vegetable presses and works perfectly. The advent of the White Mop Wringer proved a boon to the housewife—it sells itself and is a good profit-maker.

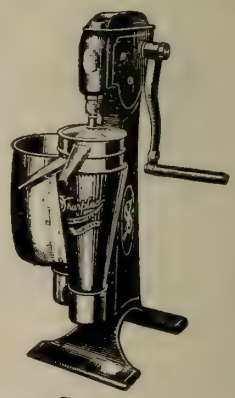
Sharples is a Standard Investment for the Dealer!

There are so many advantages in a Sharples Suction-feed Separator, over all other separators, that even the most critical buyer is interested.

For example, what more appealing argument could be advanced to a prospective customer than "Sharples will *skim clean at any speed,* saving you many dollars in butterfat." This can be said of no other separator.

Or could there be a more telling point than "Within a year (and generally within less time) your Sharples will pay for itself by saving butterfat *wasted* by ordinary separators when turned *under speed.* Sharples gives you years of efficient, profit-increasing service."



Sharples national advertising is letting your prospects *know* what the Sharples will do that no other separator or method can do.

SHARPLES SUCTION-FEED CREAM SEPARATOR

—the *only* separator that skims clean at widely varying speeds.
—the *only* separator that skims faster when you turn more quickly.
—the *only* separator that delivers cream of unchanging thickness—all speeds.
—the only separator with just one piece in the bowl—no discs, easiest to clean.
—the *only* separator with knee-low supply tank and a once-a-month oiling system.

This will be a big Sharples year, so don't get caught by late deliveries.

Embargoes, freight congestion, scarcity of raw materials make it increasingly difficult to get goods thru. Wise dealers are taking precaution of ordering early and ordering enough Sharples Separators to meet *abnormal demand.* Nowadays goods delivered are half sold.

If not now handling Sharples ask about the *Extra Bonus Contract.* Write nearest office to-day.

MEHASCO

What does it mean?

You won't find Mehasco in the Dictionary. It's not a "dictionary word." It's a business word that means business all the time.

If you were to ask Western Hardware Dealers what Mehasco (it is pronounced Me-has-co with emphasis on the has) means to them they'd invariably tell you **quality and service.**

Mehasco means Merchants' Hardware Specialties Company, Calgary, but it also stands for higher grade hardware specialties. We believe in fair dealing and giving real service to our customers. We feel that service represents a large percentage of what the dealer needs in this Twentieth Century, and by service we mean looking after the dealer's business in a fair and business-like manner, and protecting him absolutely by not selling to the consumer or by taking care of him on a proper margin if a consumer should call on us to buy. Our first catalog will be out this summer and a copy will be sent to each dealer as soon as it is ready.

MEHASCO

Fifty Subscriptions from One Firm

THE International Business Machines Company, of which Mr. Frank E. Mutton is vice-president and general manager, subscribed to 10 copies of THE FINANCIAL POST some months ago—these copies to go to their travelling salesmen. Now this company has increased the number of these subscriptions to 50 because the results of the experimental subscriptions have proved so satisfactory.

FRANK E. MUTTON

Mr. Mutton explained that the object of putting THE POST in the hands of the men of his company was to keep them intelligently acquainted with general business conditions in Canada. He said he knew no better paper than THE POST for the purpose. It would seem that his men have responded fully to effort made to keep them well informed about Canadian business affairs—so much so that the management have added 40 other men to the original 10 to receive THE POST.

When Mr. Mutton was with the National Cash Register Company as its Canadian manager, he was the king of all managers in the matter of sales records. In this position he achieved a big reputation built on solid achievements. He learned salesmanship in a school where competition was of the hottest kind, and where the competitors were brilliant men. Giving Mr. Mutton full credit for superior personal qualities and energy of the most ardent kind, it is taking nothing away from him when it is said that not a little of his success was due to his intimate and sympathetic **knowledge of the other man's business.** And he taught the men associated with him as salesmen to know the point of view and requirements of the men they called on to sell machines to.

As vice-president of the International Business Machines Company, Mr. Mutton is putting into operation an idea used by him in past days with brilliant results—he is causing his salesmen **to know the business and requirements of their prospective customers.** To establish points of contact swiftly and surely is one of the open secrets of successful selling.

In the case of **your** solicitations of customers and desired customers, it is excellent strategy to have your salesmen so well informed about business conditions generally, and about the interests of the men they canvass, that they will be able almost instantly to relate their proposals to the interests of the buyer. When a salesman shows himself intimate with the interests or business or objectives of the man whose order he wants, he is immensely strengthened as a salesman, and his percentage of successful canvasses goes steadily up.

Our definite suggestion to you is: Subscribe to THE POST yourself, and learn from its pages how your salesmen or executives can draw power from this newspaper. Then, having acquired the sought-for knowledge, subscribe to THE POST for each man in your service who can profit you by knowing what is in THE POST each week. If Frank Mutton is making a success of THE POST as a salesman's aid, it is reasonable to suppose that other managers of salesmen and executives can likewise employ THE POST as a producing agent. And so we ask you to sign and forward the coupon below.

- - - -

When Mr. Farmer comes to town on Saturday

is a mighty good time to get him interested in your store and in the fact that you're local agent for the Reliable Patent Dash Churn.

A neatly arranged window featuring a model No. 3 "Reliable" surrounded by various butter-making appliances, such as Butter Ladles, Spades and Moulds, Creamery Cans and Dairy Pails would attract the attention of practically every rural dweller. Many would come in to purchase one of the smaller articles which would give you opportunity to get in some good selling talk on the "Reliable."

By using your window for a display of the "Reliable" you link your store with the extensive country-wide advertising of Reliable Churns which is gradually influencing farmers

Co-operate with us for greater sales.

STANLEY GARAGE HARDWARE

YOU need the substantial profit which is to be made in garage hardware —now an essential part of every modern hardware store's stock.

You need STANLEY Garage Hardware because it is a complete line especially designed for garage service, meets every requirement, is of high quality, is well advertised, is in demand, and is easily sold.

Write for information and prices to-day.

The Stanley Works

NEW BRITAIN, CONN., U. S. A.

Canadian Representative: A. MacFarlane & Co., Coristine Bldg., Montreal.

Manufacturers of Wrought Bronze and Wrought Steel Hinges and Butts of all kinds, including Stanley Lall Bearing Butts, also Pulls, Brackets, Chest Handles, Peerless Storm Sash Hangers, Fasteners and Brackets, Screen, Window and Blind Trimmings, Twin Rolled Box Strapping and Cold Rolled Stripped Steel. Stanley Garage Hardware is also adaptable for mill and factory use.

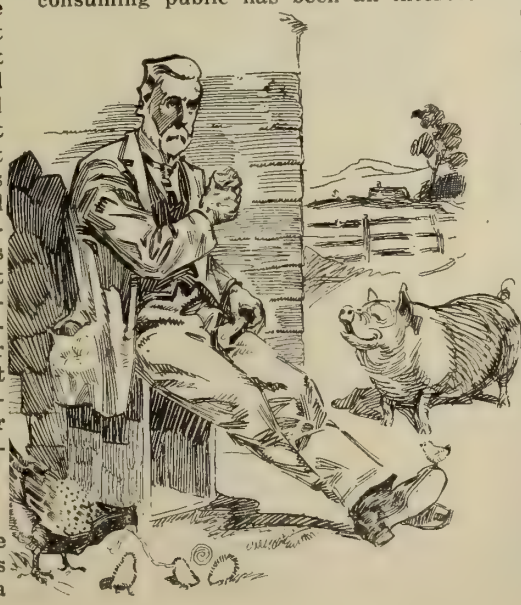
License More Probable than Embargo

Report of Proposed Restriction of Importation of Automobiles and Accessories Into Canada From United States Caused Great Interest—War Trade Board Has Made no Definite Announcement as Yet

MUCH interest was aroused during the week by the announcement in one of the Toronto daily papers to the effect that drastic prohibition of imports was to be made on goods coming from the United States into Canada. The reason for this probable action was based on the desire of the Government to create a more favorable balance of trade, so that exchange on money between Canada and the United States would not be so high. It was pointed out that the rate of exchange on New York has been running to almost two per cent. Canada has been buying heavily in the United States, and the United States on the other hand has not been taking anywhere near the volume of goods from Canada.

The announcement that an embargo was to apply on automobiles, tires, accessories, patent medicines, silverware, jewelry, musical instruments of all kinds, boots and shoes, ready-made clothing, and in fact every article which can be manufactured in Canada was sweeping. According to an announcement by the War Trade Board on Monday of this week in the form of a telegram to an interested party in Toronto no decision had been reached at that time with respect to an embargo on automobiles and accessories. It was intimated that the matter was under advisement but that no decision had been made with respect thereto. A communication from Alfred Reeves, general manager of the National Automobile Chamber of Commerce at New York, later in the week stated that he had been in touch with the authorities at Washington and had been advised that whereas an embargo had been under consideration between the authorities at Ottawa and Washington, but that it was now proposed to license the importation of automobiles rather than prohibit the importation. It was further stated that while this action has not yet been decided upon it will in all probability be the method of procedure rather than to place an embargo on the shipment into Canada.



Canadian Dealers Opposed

Such drastic action as the complete prohibition of the entry of automobiles manufactured in Canada would work a serious hardship to many concerns who have made considerable investments for the handling of United States automobiles exclusively. Some concerns would in fact be put out of business entirely. Representatives of these dealers met the War Trade Board and laid their view of the matter before that body. Statistics given out by the Department of Customs at Ottawa during the week showed that the total importations of automobiles for the fiscal year 1917 included 12,037 cars, valued at nearly $8,000,000, or one dollar per head for the population of Canada. There was almost as large a sum spent in the importation of parts, but these were largely for the manufacture of new automobiles in Canada—a Canadian industry. If the importation of entire passenger automobiles were prohibited outright Canada would lose nearly $3,000,000 in duty. The figures for 1917 follow:

	Value	Duty
Passenger autos ...	$7,981,177	$2,790,256
Freight autos	423,824	148,338
Motorcycles, etc....	177,621	62,071
Motor vehicles, parts	7,200,017	2,171,723

Shutting Out of Accessories

Just what the shutting out of the accessories would mean to the Canadian consuming public has been an interesting subject of speculation ever since the idea was put forth. One large Canadian wholesale accessory house stated that it would not mean such a large item as would appear on the surface. It was asserted that fully 70 per cent. of the lines which they handle are already manufactured in Canada. If such an embargo were put into effect it would mean a great stimulus to manufacture in Canada. Those concerns already manufacturing lines in a small way would find a greatly increased market for their product. Some lines are not obtainable from Canadian manufacturers at the present time at all. Some of these articles are: clocks and horns, two-cylinder hand pumps, battery hydrometers, spark plugs, electric lamp sockets and connectors, dash and trouble lamps, starting and motor generator brushes, grease and oil guns, gasoline hydrometers, hose clamps, body polish, top dressing, top cleaners, aluminum enamel, black cylinder enamel, black enamel metal finish, clear glass solution, rust and scale remover, rim paint, clutch and brake compound, spring lubricating compound, chain lubricants for trucks, brake lining, copper gaskets.

Illustrating the view which some of the large dealers of automobiles have taken on the matter of an embargo the following communication which was sent to the War Trade Board is of interest:

Toronto, Ont., March 25th, 1918.

To the War Trade Board,
Ottawa. Ont.,

(Special attention of Messrs. McNaught & Gundy.)

Gentlemen:

Following the conversation held with Mr. Gundy and Mr. McNaught, and the subsequent permission to lay before you our views in connection with the recommendations which we are informed will be, or have been, submitted to your Board by the Committee of Manufacturers, Importing Dealers, Accessory Jobbers and Tire Manufacturers, in support of the claims that we made, namely, that these suggestions discriminated against the importer; were altogether probable to cause extreme hardship, and in fact would do a grievous wrong to a large number of Canadian citizens, while they would in turn work a most decided benefit to another section of the trade, we have to state as follows, but feel it our privilege to remark that in view of the difficulties with which the Board have to contend, to in any way adjust

the financial situation, that we wish it to be thoroughly understood our object is not along the line of personal gain, but rather against unnecessary personal loss, and the resultant undermining of national efficiency:

The proposal that the Canadian manufacturer and assembler should operate the entire Canadian field to the total exclusion and embargo of imported automobiles.

We contend that the proposal as outlined by the general committee is impractical for the following reasons:

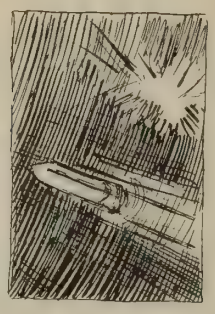
(a) That it is impossible of operation without enriching some of the present participants in the business, to the extinction of others.

(b) That the control of manufacture and sale of automobiles in Canada, if placed in the hands of an exclusive few, eliminates competition, and creates a situation that could easily develop into a combine or trust to the absolute exclusion of manufacturing interests locating or organizing in Canada, and a curtailment of the industrial development of the country.

(c) That as the so-called Canadian Manufacturers' distribution of product is conducted through subsidiary organizations already thoroughly established, they are, therefore in a position likely to receive preferential treatment upon the following counts:

1. That the distribution of domestic manufactured automobiles has, at this date, largely been effected for this season.

2. That certain United States manufacturers, we are informed on the best authority, have within the confines of the Dominion an abnormal quantity of cars, which would not be affected by the proposed restrictive measures.



3. That equitable treatment of the trade in general, even if possible on the proposed redistribution basis of so-called Canadian manufactured goods, which we do not admit, could only be effected by costly administration.

4. That distributing importers cut down to a retail basis of sales could not survive (our opinion being that it is not the intention of the Government, under any circumstances, to kill already established Canadian corporate and individual interests.)

(d) That the definition of "Manufacturer" which we understand is contained in the proposal of your Committee, is misleading in the extreme. That whereas in this proposal the Canadian manufacturer is defined as one spending 40 per cent. of the *wholesale* price of his car in Canada, this percentage including labor on assembly, administrative and all other expense, that the same does not insure that any of the material used in manufacture will originate in Canada, and that it would therefore permit firms rated as manufacturers to import the maximum percentages of assembly manufactured wholly or partially outside the Dominion.

(e) That the proposal to place restrictions of the sort in effect immediately is onerous in the extreme. In no other lines of commercial interests where restriction has been found necessary on account of war condition has time not been given to ease the situation, and it must be remembered that in some businesses which have been restricted, that those so restricted could be quickly re-adjusted to fit National or other purposes, but that the organization and investment of the automobile importers does not admit of this.

(f) That the public perforce will purchase cars from a source from which it has in the past been led to expect would be most efficient in all matters pertaining to service and adjustments, and that the sale under a distribution of so-called Canadian product would place the importing dealer receiving his percentage of the said cars at a great disadvantage, for not only would he lack parts and equipment, but in the elimination of competitive selling his efforts would be nullified, and his sales so restricted that it would make it impossible for him to maintain the most meagre

establishment, and would inevitably result in his investment as existing being destroyed, even were the intentions, as expressed, carried out in the most sincere method.

1. That particularly in the innumerable small towns and villages, in the great majority of instances central points for large expanses of territory primarily devoted to the production of food-stuffs, service would become unavailable on many of the cars now owned, and would break down the efficiency of the car owner, whether farmer or business man to a point that would, in view of the existing labor shortage, lead to idle hours and to the curtailment of production of the food so necessary. As a concrete instance of this it can be safely stated that 90 per cent. of the cars in use tend to speed up individual efficiency, making it possible for the producer to save time, and to increase the day's work—long distances necessary to procure supplies and repair parts cannot be covered by any other method as efficiently as by automobile transportation—loss of time resultant upon the breakdown of farm machinery, tractors, etc., would be unavoidable. This, of course applies particularly to Western Ganada, upon whom we are all depending at this time of national stress.

Duties and taxes to be levied on net value of invoice at point of production.

That if it is thought desirable to restrict the sale of passenger cars, commercial cars, trucks and trucking attachments to utilitarian users only, we would suggest that it might be desirable to govern the sale by making it necessary to secure a Government permit to purchase, the fee for said permit to be determined.

That a federal tax of 3 per cent. on all new automobiles in dealers' hands of the passenger car type unsold, and a tax of 2 per cent. on all new commercial cars, trucks and trucking attachments in dealers' hands unsold be levied.

That no tax be levied upon passenger cars, commercial cars, trucks or trucking attachments that have previously been in use, and held for re-sale.

The foregoing is submitted to you as but a hurried effort on our part to endeavor to place before your Board the wide interests affected by any action as contemplated, and while we feel confident that there are many phases of this situation wholly untouched by us, we are also strong in our confidence, and have been so assured, that no drastic action will be taken until all interests involved have had a chance to lay their case before you.

We thank you for the courtesy extended to us, and for the permission to place the situation, as seen by us, before you.

We have the honor to be, gentlemen,

Faithfully yours,

(Signed) A. R. LEONARD,

President, Cadillac Motor Sales, Ltd., (Winnipeg, Man., Regina, Sask.). Authorized representative Manitoba Motor Trades Association.

(Signed) E. H. McGUIRE,

Sales manager Motor Sales, Limited(Calgary, Lethbridge, Edmonton, Alta.) and of Calganry Automobile Trade Association.

(Signed) E. P. CLARKSON,

Representing Dodge Brothers Motor Car (Canada).

BILLION SAVED IN WASTE MATERIALS

The United States is taking a leaf from the book of experience of Germany and is saving all of the junk that used to be wasted. Speakers at the annual meeting of the National Waste Material Dealers in New York recently said that the reclamation was worth $1,000,000,000 a year.

One firm handling old metals alone, it was said, did a business of $45,000,000 a year. These big figures, to those who used to hum, "Got any rags and bottles, any bones to-day?" were surprising enough, but the fact that the government is going into the junk business on a big scale came along as a new thing.

Louis Berkenstein, the retiring president of the organization, is going to Washington to work with the Bureau of Reclamation.

"The average man would be surprised," he said, "to know that under the system now there is absolutely nothing goes to waste in the United States. Even old shoes are put to many uses. They may be ground up for fertilizer, or burned and their ashes treated for chemicals."

The association elected E. Salomon president for the ensuing year. He said he would do all he could to speed up the reclamation work, even in the country and on the farms. He wanted to cooperate with the quartermaster corps of the army in searching for everything that possibly might go to waste, and suggested that iron might be collected in all sections with the aid of the railroads.

NEW MANGANESE ORE PLANT

Construction of a plant at Great Falls, Mont., for the production of ferro-manganese, which will release 50,000 tons of shipping now carrying manganese to this country from Brazil, has been determined upon by the Anaconda Copper Company. The anouncement, made public to-day in a letter which Secretary Lane received from John D. Ryan, president of the Anaconda Company, said the shipping thus released would be capable of carrying 300,000 tons of food and material annually to Europe for the American armies.

The offer of the Anaconda Company to erect and equip the plant in about four and one-half months and go into the ferro-manganese business was made to the War Industries Board, which promised every encouragement and help. The ferro-manganese is to be manufactured through the utilization of low-grade manganese ores in the Butte mines never worked before, and a large tonnage has been developed in opening up mines for ores of other character. In ordinary times these would have no value, but the Anaconda Company considered it a wartime necessity to undertake their conversion. In the manufacture of these low-grade ores into an 80 per cent. ferro-manganese product, hydro-electric power is available without taking it from any other use.

Accessory Dealers Organize

S. H. Rowed, of London, Elected Chairman of Section—A. Sharp, First Vice-President —J. J. Duffus, Peterboro, Second Vice-President—H. Angrove, Kingston, Treasurer

THAT whereas it is deemed advisable that the interests of the retail automobile and accessory dealers should be properly taken care of and a great many trade evils eliminated, we believe that this can best be done by becoming associated with, and by forming a section, to be known as the Retail Automobile and Accessory Dealers' Section of the Retail Merchants' Association of Canada, Ontario Provincial Board, and that we here assembled do hereby agree to become members of said section, and to adopt the constitution of the Retail Merchants' Association of Canada, and to be governed thereby, and that we proceed to elect our officers forthwith."

Above resolution, moved by B. Cane, of London, Ont., and seconded by J. J. Duffus, Peterboro', was the one which formally brought the new association of retail automobile and accessory dealers into being at a convention which was held in the assembly rooms of the Retail Merchants' Association of Canada, 2 College Street, Toronto. The meeting was called through the initiative of the Retail Merchants' Association and was presided over by B. W. Ziemann, of Preston, president of the Ontario Provincial Retail Merchants' Association of Canada, and W. C. Miller, secretary R. M. A. In point of attendance the numbers were not large, and there were slightly less than one hundred manufacturers, wholesalers and retailers registered, with the number of retail dealers numbering about one-third of the number. It was felt that it was unfortunate that more publicity had not been given to the convention and also that it was not a good time to get the members of the trade together on account of the busy season in selling automobiles at present. There were some excellent speeches made and the material given was of high order by those who prepared the addresses. There was enthusiasm for organization on the part of those present and the association was safely launched with officers duly elected as follows:

Officers

Chairman, S. H. Rowed, of the Ontario Garage and Motor Sales Company, London, Ont.; first vice-president, A. Sharp, Wolsey Motors, Toronto; second vice-president, J. J. Duffus, dealer, Peterboro'; treasurer, H. Angrove, Kingston; secretary, W. C. Miller, Toronto.

Executive committee—J. A. McLaren, London; W. A. Warren, London; Thomas Livingston, Hamilton; R. B. Robson, Guelph, with power to add to their numbers.

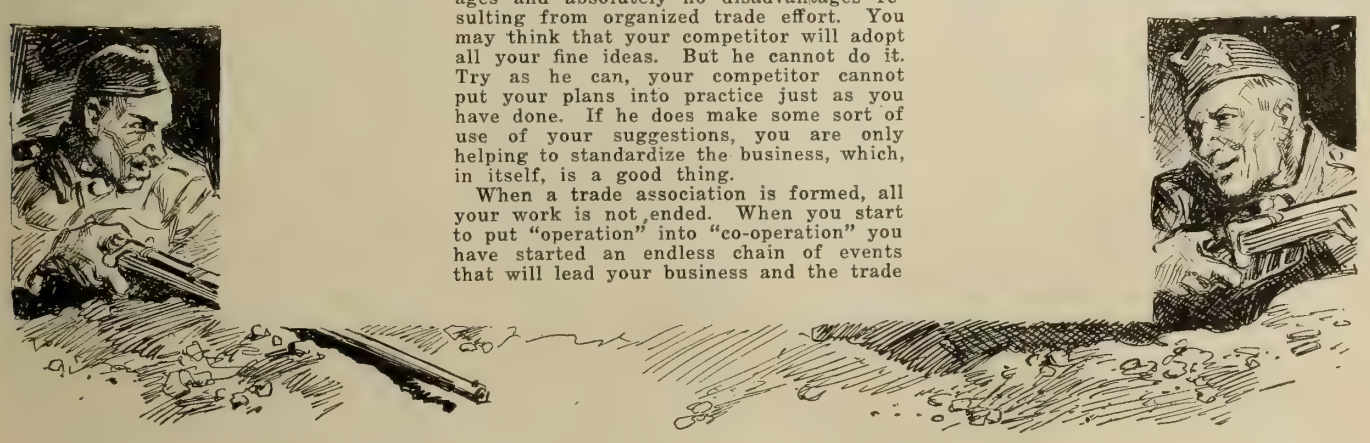
The delegates were officially welcomed to the city by Ald. S. Ryding on behalf of his worship Mayor Church. Much discussion took place on matters of vital interest to the trade. The work of organizing the trade throughout the province will now be proceeded with, organizers will take up the work almost immediately. While the numbers were small it was felt there was a good working nucleus and that with organization work properly carried out the association should come to be a vital force in the interests of the automobile and accessory trade.

ORGANIZATION

Address by W. M. Gladish to Automobile and Accessory Dealers

On such an occasion as this, when a general conference of members of a trade has been called together to secure organized conditions of business, it is quite easy for a speaker to take great liberties with the English language. He can employ generalities of expression that mean little, and he can use many fancy words that sound nice but do not take the audience to any destination. In introducing the subject of "Organization" at this convention, I might say many things which would please you, but they would not help the situation in the slightest. What I do want to accomplish is to give you the benefit of my experience as a journalist and an amateur trade organizer. I have come into contact with many trade associations; I have helped to organize many business bodies, and I have seen the benefits which are derived from co-operation.

In a nut shell, there are many advantages and absolutely no disadvantages resulting from organized trade effort. You may think that your competitor will adopt all your fine ideas. But he cannot do it. Try as he can, your competitor cannot put your plans into practice just as you have done. If he does make some sort of use of your suggestions, you are only helping to standardize the business, which, in itself, is a good thing.



When a trade association is formed, all your work is not ended. When you start to put "operation" into "co-operation" you have started an endless chain of events that will lead your business and the trade in general to permanent success. A trade association is not a panacea for all ills. An association is not the beginning and end of all troubles. The association is the channel, however, through which you can secure relief from evils if you will do your share of co-operating. It has been said that "jealousy is the devil in any home and it is hell in any business." Professional jealousy has wrecked many enterprises. You will always find that when two or three are gathered together that new ideas will develop. I mean by this that entirely new thoughts will arise and everybody will be benefited. You could not have secured these new ideas in any other way than through the exchange of thoughts.

Too Close to Grindstone

You may not realize it but you have been living and working too close to the grindstone all along. You have been too self-contained. You have not been reaping the maximum benefit from your efforts. Why? Because you have not been enjoying the countless advantages of co-operation which come through a union of interests. Many of the present conditions which are bothering you would not be evident if you had been organized to meet outside influences. You talk of this and that tax, this and that restriction. If you could have talked the situation over with your competitors you would have been able to regulate matters effectively by the power of your united decisions. You have been wondering what Ottawa is going to do to you. If the automobile business had been thoroughly organized you could have told Ottawa what to do. In any event, you could have discussed the situation with the authorities and your negotiations, as a trade body, would have led the Government to take action along lines that would be fair and equitable. Up to this moment you undoubtedly have allowed yourself to hold the opinion that most everybody was working against your interests. God helps those who help themselves. This convention could not have been held at a more opportune moment. It may be too late to ask Ottawa to consider your message in the present crisis but the situation is such that you cannot help but realize the need for co-operative work. Now is the time to get busy to prevent further restrictions and hindrances.

Prostitution of the Press

I cannot permit this opportunity to pass without reference to a subject that has been in my mind for five or six years. I refer to the prostitution of the press

by the automobile people, generally speaking. I mean that you, individually, have been wasting the power of the press. The daily newspapers have devoted many columns of space in the past to the publiccation of factory-baked reading matter that got nothing for you. Look at any automobile page in a newspaper in the country and you will find a lot of stuff that is merely wasting valuable space. The casual reader of the newspaper, who is the man you are trying to reach, does not take the time to read what some automobile dealer or owner has done in Alabama or about some automobile stunt that took place in some out-of-the-way place in Oklahoma. The newspaper has been anxious, in many cases, to print this stuff because it was anxious to get your advertising business. It is partly the fault of the newspaper and mainly your fault that the paper has not been supplied with real news about the automobile. With a real live association, you can remedy this evil because you can arrange to have all newspapers supplied with real information of local interest. That is the stuff that counts. If all the columns devoted to so-called "bum puffs" had been used to create proper impressions among the people about the utility of the automobile, you might not be suffering now from super-taxation and iniquitous legislation. The papers have been improperly used because you have felt that the main thing was to get the name of your car and your own name in the papers, regardless of the nature of the so-called news that went with it.

Time For Real Change

It is time for a real change in this respect. Because the automobile has been improperly advertised in this way, the whole automobile business is more or less under a cloud. The organization of an association in Ontario will help to drive the cloud away. I could speak at great length on this vital subject but time does not permit. I will say, further, however, that such articles as you have been reading in the daily newspapers during the past few days have been the result of the fact that you have not been in close touch with the newspapers. If you had a real association, the newspaper editor would have simply referred to an officer of the organization for the trade side of the story. In this way, you would have been able to correct a mistaken notion.

You are behind the times although you are associated with a young industry. I refer, in this instance, particularly to the dealers of Ontario. There are strong automobile trade associations in Montreal, Winnipeg, Calgary, Vancouver and other Canadian cities. These associations are dealing with many matters of national importance as well as local matters. The trade association idea is not a new one. You will find such organizations in many other businesses of the country. It is your turn now. Even the bicycle business is well organized. You can take a real lesson from the bicycle industry. In many ways, you owe a great deal to the bicycle. The bicycle made the automobile possible.

"The automobile accessory business has grown during the past years to such proportions as to cause all but the most careful observers of the business to lose sight of its size and importance. From a pastime of a few years ago it has grown to a full-fledged industry involving millions of capital and employing the services of thousands of men. A portion of this phenomenal business can readily be obtained by every automobile and garage man.

5,000,000 Gallons Lubricating Oil Used

Estimated Will be 240,000 Cars in Canada by End of Present Year—Consumption of Gasoline in Neighborhood 100,000,000 Gallons—Oil Man Gives Interesting Data

J. F. SHATFORD, manager, Eastern Ontario division of Imperial Oil Company, gave some interesting facts in connection with the consumption of lubricating oils in Canada at the convention of the Ontario Automobile and Accessory Dealers, held in Toronto this week. His address follows:

"The important question that arises is, What do we estimate the consumption will be of auto oils during 1918? At the end of 1917 there were 200,000 automobiles registered in Canada, an increase of 80,000 over the previous year. If we allow for a similar increase during the present year and say that half of this increase will be effective from the beginning of the season, this will give us 240,000 on which to base our figures for 1918. We figure, as a conservative estimate, that the average consumption, after making due allowance for cars laid up for repairs, etc., is 20 to 25 gallons per car. This gives us a total of, say, 5,000,000 gallons. The Province of Ontario accounts for approximately half the total number of cars, and will consume half this quantity of oil. Gasoline consumption in Canada totalled about 100,000,000 during 1917.

"This has become a very important branch of our business, requiring great technical knowledge on the subject of lubricating oils in relation to internal combustion engines, and we have endeavored to impart some of our knowledge to the public through advertising of an educative nature, although this can only be done in this way to a limited degree.

"We miss the annual automobile show of pre-war times, when we could in a practical way demonstrate to the dealer and automobile owner at least two very

J. F. SHATFORD

Manager Eastern Ontario Division Imperial Oil Company.

important qualities essential to a good automobile oil, and at the same time give him an ocular demonstration of the fact that while two oils may appear to be identical at a certain atmospheric temperature, a great difference may be observed when they are exposed to low temperature or submitted to high temperature.

"I may mention as a matter of interest that the inner walls of a water-cooled cylinder carry a temperature ranging from 250° to 350° F. Keep this fact in mind when looking at samples in bottles. You see these oils at atmospheric temperature ranging at 60° to 70°. At this temperature two oils may look alike, but submit them at 300° of heat and a poor oil will break down in body as thin as kerosene, while a good oil will be only imperceptibly affected, still retaining its lubricating efficiency. Again submit them to a cold test of, say, zero to 10 above; a good automobile oil will still remain fluid, while a poor one will congeal and cease to flow. It is only necessary to mention these points to see how important they are.

"It is not a very difficult matter for the oil refiner to produce an oil with either one or other of these qualifications, but it is a difficult matter, and one requiring the most scientific treatment to produce an oil with these two qualities in combination—i.e., resistance from deterioration against both high and low temperature. It is not every crude from which these results can be obtained, and it may be of interest to know that we use Peruvian crude from which to refine our best automobile lubricants.

"There is one more point I would like to mention: When an automobile is new all the working parts are snug, with just enough free play for smooth working, and under these conditions a comparatively light bodied oil is required. After the car has been in service for some time the parts become worn, with more space between the working parts, with the result that a time arrives when a change to a comparatively heavy oil is required. In our business we have provided for this contingency by placing on the market two scientifically prepared grades.

"In what I have said I have tried to bring out two points of real interest to the dealer, viz.:

Lubricating Oils on Increase

"1. The rapidly increasing consumption of automobile lubricating oils estimated at 5,000,000 gallons in Canada for 1918, and in this connection you are each interested in ascertaining how much of this trade is available in your district. To find this count the cars in your field.

"2. The necessity of stocking oil of a known reputation for good automobile lubrication. It is not always convenient, nor indeed is it possible in every-day dealings, for the dealer or automobile owner to make the tests alluded to above, but he must of necessity rely to a large extent upon the reputation of the firm with which he is dealing.

Credit Not Advisable

"I notice on the programme that a representative of the Imperial Oil, Limited, would say something in connection with credits. This is really a rather delicate subject to deal with; but I am going to take the risk to briefly state that if there is one line on which credit should not be asked it is on material used for pleasure, such as gasoline and all other products, including accessories, and the principal reason for this is when a man goes to a garage or filling station and has his tank filled with gasoline we will say, for example, before making a trip he knows when the trip is over that the product he purchased for his pleasure trip has gone up in smoke, so to speak, and if there is anything that calls for cash terms it is, I believe you will agree, a product which is used almost solely for pleasurable purposes. If a user asks a garage man for credit, unless the latter has a large capital it means that he also must get credit from the manufacturer or his supplier, and, considering conditions to-day, it should be very difficult for anyone to buy petroleum products on credit.

"I am quite sure the manufacturers of petroleum products to-day, with one or two minor exceptions, could sell all their products for cash without sending out a salesman. This is owing to the large export, as well as large local demand.

"The man who sells on credit naturally must get higher prices in order to take care of the extra clerical work and to provide for bad debts, of which there is bound to be a certain percentage proportion.

"Money is comparatively plentiful. Therefore, I do not believe there was ever a better time for all retail merchants to inaugurate an absolutely cash system of some kind."

Tendency in Tires Toward Anti-Skid

Anti-Skid Adds Measure of Security and Prevention With Greater Life—Capital, Brains and Big Machinery Required in Making Tires

A. A. BRIGGS, advertising manager of the Dunlop Tire Com-Company, gave a talk on "Peeks into Tiredom" at the convention of the Automobile and Retail Dealers' Association in Toronto as follows:

Survey the business horizon of any civilized country, analyse the vicissitudes of any industry, and undoubtedly you will be at a loss to find a commercial unit that, starting as modestly as the pneumatic tire, has become such a factor of comfort in the life of the nation.

It might be said that the automobile made the tire. Then, again, it might be said that the tire made the automobile. Certainly, a sizing-up of the early days of the pneumatic tire industry shows more than a goodly measure of the usual discouragements. Some folks thought the tire industry was rendered hors-de-combat when the bicycle started to slip about fifteen years ago. Yet you all know what happened—not only did the automobile at first creep then burst into public favor—but the bicycle came back with a vengeance, too.

No sensible man now gives much credence to theories about substitutes for rubber in making tires any more than he pays heed to all those fantastic contrivances that are going to take the place of inner tubes—according to the inventor.

While it is generally considered that shock-absorbers and good springs make for greater running life in the car, there can be no doubt that comfort in driving is to a large extent in proportion to the resiliency in the tires.

So that, while tire manufacturers in the past decade or so had largely to concentrate on the right way to convert pneumatic bicycle tires into automobile tires, by a process of enlargement, the present day tire maker, if conscientious, is kept busy getting still greater efficiency out of the established methods and processes of manufacture, which have well nigh proven their invincibility.

A. A. BRIGGS

Advertising Manager Dunlop Tire and Rubber Goods Company, Toronto.

The tendency at this time would seem to indicate a decided preference for the anti-skid tire. To anyone who drives a car this is at once logical. Apart altogether from minimizing skidding, the puncture bugaboo makes any auto owner see that a tire with solid corrugations on the tread has that much greater chance of heading-off the ever-present nail. Then, again, as you all know, on rainy or sloppy days cars, especially with small wheel bases, have great difficulty in making headway on plain tires.

No matter how viewed—apart from the factor of original cost—the anti-skid tire adds a measure of security and prevention, with greater life thrown in as good measure, that the knowing motorist will eventually regard as indispensable.

What the future holds in store for either the tire-maker, seller, or user, no one can predict with certainty. Yet pronounced tendencies make possible at least some ventures into the realms of speculation.

This very meeting itself is surely indicative of which way the wind is blowing—not out of the tires, but into the fundamentals of retail management—reselling, cost-finding, etc.

Probably in the past there has been too great a tendency to think that anybody could jump into the garage business, that the great sale of cars gave it the King Midas touch of easy money. It must be patent to anyone acquainted with the automobile industry, and likewise the tire industry, that the same business acumen—same qualities of hustle and reliability—are as necessary in selling tires as retailing any other commodity.

Somebody once averred that the moving picture business was nearly all profit. Then, after they went through a "movie" plant and saw that it consisted largely of a dark room, and enough vacant floor space for a dark cat to prowl around as a sort of good-luck mascot, they were completely convinced that the business was absolutely all profit.

The same fellow ventured further in his surmises and hinted to someone that the tire business was a veritable gold mine. Then, after he had been taken through a plant where tires were made, he confessed he had a change of heart—it really took capital and brains, and big machinery, and a multitude of busy people to make each and every tire.

Unfortunately, working on this theory that anybody could dabble in the tire-making industry, Canadians have been exploited in more ways than one by men who were going to work revolutions in the tire business—the principle revolution being that kind of camouflage which catches the ear of the unwary investor, then catches the first train out of town.

Probably in the future we will still have with us, like the poor, the smooth, dapper gentleman who wiggles into some small city or town, and there in the glorious sunshine paints a picture, subject: "Stretching the Truth About Rubber." Everybody knows him. He is a pronounced enemy of the trade, because the stock holders he seeks are told they will get their tires direct with ten or fifteen per cent. off.

Must Change Business Methods

Editor of Motor World Says Man Returning From Front Will Expect That Business Methods Should Change—Used Car Show in Chicago

RAY W. SHERMAN, of the "Motor World," New York, said if the organization went at it the way that discussion was carried on that afternoon it would mean a real beneficial organization. In Chicago they are holding a used car show. One of the things is to have an appraisal committee to pass on a car and give some guarantee that it will not be junk. They must be all rebuilt cars. Such a show must be advertised and organized. They distributed something like 200,000 tickets and put an admission of 25c on gate; this netted some 1,500 paid admissions.

Inspection of all cars entered was made by the show association. Their schedule of depreciation is on a fair basis; it is published by the Chicago Automobile Trade Association, and is issued four times a year. Systematizing of used car business is very important. It is a fact that the automobile dealers are often not good business men, because they were very often mechanics. They are not to blame for this, but a man cannot remake himself in a hurry. When the men come back from the front they are not going to accept things as they left them. If we as business men do not change we are not going to keep up with the procession; it is a transformation of character that is needed. We must come near to the ideal of Mayor Duffus, of Peterboro, who has departmentized his business.

"Business is changing faster than we realize. If we do not get the cars what are you going to do? The man who does not know where to turn will go out of business. One man was telling me that the hardware man is selling accessories and the owner is taking them around to the garage and gets the garage man to put them on, and the latter loses money on the transaction. One man had accessories and kept them under the back stairs. He never really started to sell accessories until he put them in a window and now he has an accessory store.

One of the troubles in the United States is to get men; no, you never can get men. You have to make skilled men. There must always be an incoming source of trained men.

You must have a definite policy on giving service. One concern gives no free service whatever; some, however, consider their car often gets a black eye if some little thing is not righted.

Salesmanship is a thing that is given too little consideration and Hugh Chalmers says to get 100 per cent. salesmanship an Irishman must sell to a Scotchman and the Scotchman to a Jew, and they must all make money. Mr. Sherman was given hearty applause for the breezy and able way in which he treated his subject.

Problem of Credits

Mr. Beach of the Northern Electric Company dealt with the subject of "Credits in a Retail Business."

"Prosperity as we see it now is nothing more than a false prosperity, and we want to be prepared for it, some will be lambs and some will be goats. To prepare for that time we must lay a basic foundation. Accounts should be divided into two classes, first those who pay their obligations when they are due. Second there are those who are a moral risk in carrying; only one way to deal with them and that is to know your man. Any expenditures made in entertainment and traveling are well justified in getting to know your men. I have done considerable traveling in finding out and knowing the man; it has often saved the situation; you get his confidence and you are in a better position to understand him; when you have talked with him you are in a better position to know him than by receiving reports of mercantile reporting houses."

Manufacturer's Relations to Dealer

H. C. Lower, sales manager of Goodyear Tire and Rubber Company said:

"It is generally recognized usual channels are the manufacturers, dealers and consumers. The tendency has crept in to think the manufacturers are getting the biggest end of the deal. The problem uppermost in minds of manufacturers is to know what it costs the retailer to do business, but he wants to have more expertness and permanent distribution. The retailer must get a fair profit in order for the manufacturer to retain this business, so it is to his interest to keep his good-will. What is good for the retailer is good for the consumer. Your problem of gross profit and net profit will be greatly facilitated by having an accounting system that will show the manufacturer what the actual profit is. The growth of transportation is going to be one of the vital factors in development. There are three kinds of transportation —motorcycle, automobile, motor truck, which are becoming more and more one of the largest industries of the world. It is generally conceded as fair to make 5 to 10 per cent. on turnover; where turnover is made four or five times over it should be reasonable to expect net profit to be as low as 4 or 5 per cent.; where turnover can be made only once a year the net profit must necessarily be higher and would probably range up to 10 per cent."

William Allan, sales manager of the Marathon Tire and Rubber Company, in his talk on "Tires," dealt with the problem of the price cutter. He dealt with the advantages of organization to overcome this. He said in part:

"The manufacturer has been in no way to blame for price cutting, unfortunately the dealer is not able to insist on a certain price because his competitor cuts first. There is something radically wrong in this condition. If the trade is organized this could not happen. There is a certain aim by all good dealers, viz., the acquisition of goodwill. The price cutter does away with all this; this can be overcome by organization."

W. M. Gladish, editor of "Motor Trade," stated that he had received a telegram from Ottawa on Monday of this week which stated that the government had not yet taken any action with respect to embargo on automobiles and accessories. The War Trade Board had been considering the matter but as yet no recommendation had been made. A communication from Alfred Reeves of the National Automobile Chamber of Commerce of New York City the following day stated that he had been in touch with the authorities at Washington and that it was now proposed to license importation of automobiles into Canada rather than place a complete embargo on their shipment.

Bill's Vision.

Time for Economy in Automobile Trade

F. W. Evans, Toronto Manager of Canadian Fairbanks-Morse Company, Says it is Better That Dealers Should Institute Economies Rather Than Have the Government Compel Them to Change—Should Assist the Government

ASSERTING that it was not the purpose of the Government to "cut off their nose to spite their face" in the prohibition of imports of automobiles and accessories into Canada, since there was an enormous revenue derived in Customs duties, F. W. Evans, Toronto manager of the Canadian Fairbanks-Morse Company, at the organizing convention of the Automobile and Accessory Dealers of Ontario, made a plea that dealers should get behind the Government and give them every assistance in this time of stress. His address follows:

PRESENT DAY PROBLEMS

Mr. Chairman and Gentlemen:—

I do not promise to solve everybody's problems or difficulties, as every firm has troubles of its own peculiar to its business and location—but there is an old saying that when "A" is in trouble, "B" with due consideration refers him to "C"—or in the common every day expression—"Let George do it," which aspect has been in evidence and is still apparent among corporations and individuals in dealing with war measures and problems.

A great many Canadians have not yet realized that we are at war. The same extravagances—in food and clothes—the same indulgences in amusements and idleness, and the same lack of concentration of effort are in evidence and, in many cases, to a greater extent than they were in late 1914 and early 1915, due largely to prosperity of a lot of people, who never saw or had so much money in their lives before, and never having been trained or educated in the handling of large sums of money, spend it inadvisedly. In fact, I think I am safe in saying that there are hundreds of people who have purchased automobiles since the beginning of the war, and the war has made it possible for them to procure a car whether their position in life enables them to afford such a luxury—the question is should we encourage such business—evidently the Government intends to answer this question for us. Are we going to waken up, and when? After the Huns have won? Or are we, all of us, going to help beat them?

We, all of us, are asked this year to save our money to help in future Government loans. There will have to be more, probably many of them, and we, all of us, are being asked, begged, to help increase and conserve our food supply, as well as direct and conduct our business in every possible way to win the war.

We are all, more or less, selfish of our own interests, hollering about our rights. What are our rights anyway? Have we any, when we stop and think of the war necessities? Let us eliminate the word "rights" and substitute the word duty—what is our duty?

We are face to face with the greatest of problems and everybody is anxious to know what effect the anticipated Government restrictions will have on our business. Is it not much better to suffer temporary loss or restrictions than to experience total loss later on? Let the purpose or keynote of this convention be to assist our Government in every possible way. This first gathering is a step in the right direction, it will mean a better understanding, more co-operation—just to illustrate, last year the Ohio State Automobile Dealers' Association was organized and at the first meeting held at Canton, Ohio, shortly afterwards, the president was called to Washington, with five other automobile dealers, to meet with the Economy Board, to discuss the automobile business from an economic standpoint; in other words the Economy Board wanted to know where or how the automobile men could economize in their garages so that in case the war department would call on and take away from them from fifty to seventy-five thousand mechanics whether they would be able to adjust themselves to the condition and have this advanced information without crippling their business. The chairman of the Economy Board stated that while they were not anticipating immediate action, so far as taking the men was concerned, they had called the dealers together that they might start to prepare themselves, as in case the men would be called it would take from one to three out of every garage in the United States and the dealers would have had time to prepare themselves and so arrange their work as not to make it a hardship to have these men taken from them. To give you an idea what they meant by "economy," for instance, they had called into conference the woolen cloth manufacturers, the merchant tailors, gents' furnishing stores and others to discuss the different problems of economy in their lines. The Economy Board found that there were given out over seven million samples of wool, ranging from 6 x 5 inches in size—such samples as you see in tailoring shops. These samples they were going to cut down to the size of a calling card, and some of them would be eliminated altogether, which would mean a saving of one and one-half million yards of wool. They also planned to change the lining on the inside of coats to be placed at one-half inch of edge instead of four inches of the edge as at present, which will mean a saving of another million yards of wool.

F. W. EVANS

Manager Ontario Branch Canadian Fairbanks-Morse Company, Toronto.

The can of paint. There will not be all kinds of shades and colors of paint. There will be only the standard colors, as red, white, blue, green, black and so forth. There will not be the numbers of shades to set around in the hardware stores from five to ten years without being used. This means a saving of nearly a half million gallons of paint.

The matter of service was discussed. He asked how many free service stations there were in Canton. "Well, these men go out and change tires as far as five miles, free. Is it not a fact that if a man knew that he should have to pay for the service of these men and cars to change his tires, he would get out and change them himself?" He asked how many of these tire men were employed. The answer was from one to three men. "They are all good drivers, are they not?" The answer was yes. "That is the kind of men we are looking for to drive trucks and ambulances."

The chairman said further, "We are not going to do anything drastic or anything that will cause a hardship on the automobile dealer, but we want to start to prepare for things that may have to be done and then if we do not need to do them, we have not lost anything, and if we do need them we have gained much." In conclusion he said: "Now, gentlemen, the government wants you to organize. It is absolutely necessary that you go home and organize your dealers, those who have not organized, so that when we need a representative of your automobile dealers we can push a button and get him down here to Washington immediately." He said, "It is your patriotic duty as citizens to organize and be in position to give the government the support it may require."

We can be of the same value and assistance to our own Government. They do not intend to "cut off their nose to spite their face." The revenue to the Government from automobiles and accessories is enormous—both directly and indirectly—but their object and purpose is, due to present conditions, to direct and educate us in handling our business through channels where it will do the most good, in their efforts to win the war. Therefore, let us not hinder but help. We, all of us, might, by slightly tightening our belts, and pulling our purse strings, relieve the situation a great deal, and we can and will have to do it, and much better now than later—for every individual and business organization in Canada must be made to realize the seriousness of the situation—face the facts, and do their part. We cannot do it as individuals but as organizations, the nucleus of a very important one we are starting by this convention.

There are many problems we have to face, peculiar to the business we are in, but time will not permit me to dwell on them.

Credit, you will agree is the most important part of your business—if I were to ask different gentlemen here the name of the worst dead beat on your books, a very interesting discussion would commence. You can see what a strong dealers' organization will do for you, with an ex-

change of credit information bureau—it will protect you against undesirables. It makes a wonderful combination between the customer and the dealer and improves the position of the dealer with the manufacturers and wholesale accessory houses. By the way, the other day, a credit manager of one of the large accessory houses was telling me about his experiences with some of the garages, and he stated that he had occasion to 'phone one garage whose account was overdue, and as they had ordered more goods, he politely asked if they could let him have a cheque on account, or would he send the additional goods up C.O.D., and the response over the 'phone was, "That they would see him in hell first"—a little more Christianity in business would help a great deal. Many problems will be overcome by a dealers' organization in Ontario, and many benefits derived therefrom.

Educational campaigns among the dealers of the province, so far as keeping their places clean and in good shape, their stocks well displayed in show cases and in many other ways, keeping their places in shape so that lady as well as gentlemen buyers may enter as readily as into a hardware store or drug store or any other place of business. This campaign may be put on by their secretary, and it will not be long until the dealers throughout the province will be considered just as good merchants as anybody else in the merchandising business.

Manufacturers' contracts can also be eliminated through the dealers' organization. I speak particularly of the contract made by the manufacturer of automobiles to the dealer selling cars. I recall one case where a man was in the baker business. He bought an automobile, and the salesman persuaded him to sell his business, which at that time was making him money, and go into the business of selling cars. He interested the man so much that he decided to do so. He sold out his business for $7,000. His wife inherited $5,000 more. They took the $12,000 and put it into the automobile business, rented a $3,000 salesroom which they leased for a term of years. The man the first year sold about enough cars to break even on expenses. The second year he sold about twice as many cars as he did the first year, and made some money, but he spent the greater part of it for advertising and building up what he thought was going to be a permanent business. But there was a man in town who was jealous and who thought the other fellow's business was too flourishing and doing too much business on the line he was selling, and he wanted the line. He goes to the manufacturer making the car and offered to take twice as many cars as this man had contracted for, and also put up twice as much money as this particular man was able to do. It was along about the latter part of February when the manufacturer suddenly decided that he would cancel this particular agent's contract. The man had carried all of the expenses through the winter of a large place. He also had orders booked for spring delivery, but this made no difference to the manufacturer. His contract was automatically cancelled, and the agency was turned over to another concern. The new concern decided that they did not want the lease, therefore the man was left with a large building on his hands with no agency or anything to put in it. He also had a lot of machinery, parts and other materials to take care of the service of a car which he was selling, which the new man naturally bought at fifty cents on the dollar, as it would have done the former dealer no good after losing the agency for the car. This kind of contract will certainly be eliminated as soon as they have enough of strong organizations.

The organization will also eliminate the salesman going around and selling all of the dealers about, two, three and sometimes as much merchandise as the dealer should buy, simply because he tells him he is giving him the jobbers' prices, and that he will be able to clean up. The fact of the matter is that this salesman knows that this dealer cannot clean up the quantity of merchandise he is selling him. The dealer finds that the merchandise is a boomerang, absolutely worthless, and will not sell at all.

The wholesale accessory jobbers want to prevent this, and their salesmen know that they discourage business methods of this kind, but on the other hand, the wholesale accessory jobbers are clearing houses for the dealers—for in purchasing millions of dollars' worth of accessories every year, they have an opportunity to develop good judgment in buying, sorting out the worthless and useless accessories, for there are many, on which good time and money is spent. These must be eliminated just the same as restrictions on other commodities and supplies.

I feel confident that this organization will be ready at all times to co-operate with the Government and all branches of business in meeting war conditions, even to the extent of self-sacrifice, which, after all, is one's duty in this crisis.

Retailer Should Pay Himself a Salary

Address on Cost of Doing Business Before Automobile and Accessory Men Created Much Interest—Knowledge of Business Necessary

At the convention of the Retail Automobile and Accessory Dealers of Ontario an address by John C. Kirkwood on "The Cost of Doing Business" was of great interest to those present. Mr. Kirkwood enumerated the various items that should be taken cognizance of in ascertaining the cost of business. "If a merchant knows the cost of doing business he will make the necessary effort to make his required profit. The cost of doing business has an intimate relation with the question of salesmanship." The substance of Mr. Kirkwood's address has already been given in these columns as the speaker recently addressed the Ontario Retail Hardware and Stove Dealers' Association at Hamilton on the same subject.

Advisable to Advertise

R. A. Baker, of the Baker Advertising Agency, said the dealer can get a great deal more business if he goes after it. Letter, direct literature, local papers and parish papers are good mediums. In a town of 5,000 population he would advise spending $500 in local newspaper, and $500 in other literature. The manufacturer will usually go fifty-fifty. Mr. Baker believes advertising beats down resistance to extent of 75 to 90 per cent. Putting the written message across brings good business.

Requirements of Salesmanship

J. B. Caswell, general sales manager Champion Spark Plug Co., said the section was lucky in having a parent organization. "Any business is a good business if you run it as a business. Show me the business that has not a trade organization and I will show you a business that is not paying. The main object of all dealers is to make money, when that is realized co-operative effort becomes easy.

Salesmanship requires that a man keep physically fit; you must be efficient; to be efficient you must know your goods. To be efficient you must live, breathe, talk and die with them. Buyers want to know the simples; do not becloud with technical points; study the plain essential facts—the things he wants to know the same as you want to know. Character study is the greatest help in salesmanship that can be found; do not bore your subject. The term best fitted is diplomatic persistency. The question is when to stop and when to go on. Cost has a direct relation to sale; in keeping down costs it becomes an aim; you know what you have to attain when you know the cost of doing business.

LABOR SAVING DEVICES WEEK

The second annual Household Labor-Saving Devices Week will be nationally observed by furniture merchants and house furnishers in general during the week of May 6 to 11, at which time a special drive on goods in stock which make housework easier will be put on.

The idea for Household Labor-Saving Devices Week was originated last year and it was put on by many merchants with gratifying increase in sales. This year bigger plans have been made for the week and manufacturers of labor-saving articles have been invited to co-operate in helping the merchant make the week a big success.

The idea of an anual Household Labor-Saving Devices Week has a sound merchandising foundation, and any merchant selling household furnishings can observe the week with a satisfactory increase in profits. Old methods are fast going into the discard. War needs have speeded up efficiency everywhere. The home has assumed unusual importance of late as the necessity for saving on food and fuel has increased. Women are taking an active part in the war work and they are being stimulated to thrift and efficiency as never before. The war has accomplished in a few strenuous months domestic benefits that years of peace might not achieve. Thus women are eager for the latest methods and the up-to-date appliances for doing their housework and saving food and money and time, and the merchant who observes Household Labor-Saving Devices Week will be astonished at the widespread attention it will receive.

Domestic help, too, is scarce this spring because women who work have been attracted by the high wages offered by factories and so more housewives than ever before are doing their own work. This gives them a special interest in labor-saving articles.

Growing Gasoline Demand Will Be Met

Estimated Needs of United States For Home Use and Export Placed at 63,000,000 Barrels, or 2,000,000 Barrels More Than Production

THE gasoline demand for the year 1918 will be met, says Richard D. Leonard, manager of Atlantic Refining Company in an article in the Philadelphia *Public Ledger*. In the face of facts that apparently indicate a shortage, the petroleum industry merely smiles and says, "The demand for gasoline always has been met and will be met again this year."

There is no fear or apprehension. On the contrary, there exists a feeling of confidence that could be born only of years of experience.

There has not been a year since the automobile industry became a factor in our national life that the estimated requirements for the year have not exceeded the estimated production. But in each case the petroleum industry has risen to the occasion and met the demand.

The average man may well wonder how it is done when he considers that the number of automobiles owned in the United States jumped from 400,000 in 1910 to more than 5,000,00 in 1917 and, of course, the gasoline demand rose in proportion. In the same period the production of crude oil increased only 60 per cent. to meet this increase of more than 1,000 per cent. in motor cars.

In 1910 there were produced approximately 210,00,000 barrels of crude oil, and in 1917 it was 340,000,000 barrels. It is very apparent from these figures that crude oil production did not in any sense keep abreast of the needs of the country.

The refiners' problem, therefore, was to meet the growing demand for gasoline by increasing the yield of gasoline from the available crude oil. The achievement of the refiners of petroleum in increasing the yield of gasoline from crude oil sufficient to meet the unparalleled increase in demand is remarkable as an industrial accomplishment and has served to place it among the leading industries of the world.

Gasoline Supply for 1918

Any prediction or prophecy of how the demand for gasoline will be met in 1918 should be based on past experience as revealed by the statistics of the petroleum industry and not on any assurances pertaining to the future. The gasoline requirements for the year 1918 must of necessity come from the crude oil and from the supply made from natural gases, which is seldom in excess of five or six months' requirements, while gasoline in stock at refineries is seldom in excess of from thirty to sixty days' requirements. This would furnish a rather discouraging outlook, but for the inevitable optimistic attitude of the petroleum industry.

The latest figures available indicate the stocks of crude oil amount to about 212,000,000 barrels, equivalent to 34,000,000 barrels of gasoline. In addition to this there are about 6,000,000 barrels of refined gasoline in stock at refineries. For the last several years, besides using up the regular production it has been necessary to draw more and more upon the reserve stocks. In 1916 the crude oil in storage was drawn on to the extent of 24,000,000 barrels, and in 1917 the reserve stock was further reduced 24,000,000 barrels.

And yet, in the face of these astounding figures the producer merely smiles and says, "The demand always has been met and will be met again this year."

Production of Crude Oil

Crude oil producing requires an operator with an optimistic viewpoint. It is, always has been, and probably always will be a business that has in it a large element of chance. The geologist and his studies have undoubtedly assisted in the solution of the problem, but the average producing field has been developed by men who had very little faith, if any, in the findings of the geologist, but who by nature were inclined to take big chances with only the incentive that they might some day strike it rich.

Ordinarily the individual or small operator is the man who does the experimental work in the undeveloped field, and it is this type of operator who is doing the "wildcatting" and is responsible for the opening up of the big fields where crude oil production is possible on a large scale.

The stories of virtually all the larger oil fields in the United States country are the same. There is the period of wildcatting or experimental drilling, the period of steadily increasing production until the peak is reached and then a gradual decline until the field ultimately peters out. It is, therefore, very necessary in order that crude oil production should be kept up that there should be an incentive to keeping up constantly experimental work for the discovery of oil and the opening up of new fields. To the average man who has made a success his business is the greatest game in the world, and if you take out of it the element of sport you rob it of all incentive.

Crude Oil Refining

Assuming that the production of crude oil in 1918 will increase in the same proportion as the production in 1916 and 1917, the problem then becomes one of stretching the refining of gasoline to cover the demand. It is generally estimated that the 234 refineries throughout the United States have a still capacity considerably in excess of the requirements for running off the maximum production of crude oil.

It is estimated that 318,160,000 barrels of crude oil will be run at the refineries in 1918, and that the yield of gasoline will be 61,000,000 barrels. The needs of the nation for domestic use and export have been estimated at 63,000,000 barrels, 2,000,000 more than the estimated production. This shortage will be made up from the reserve stock of 6,000,000 barrels on hand January 1, 1918. There is a possibility, too, that gasoline from Mexican crude oil may be used to bridge the gap. The problem of facing an apparent shortage is simply a repetition of past experiences, and if the problem is left in the hands of the men who have been a force in the building up of the industry, the supply for the year 1918 undoubtedly will be very amply met.

The handling of the entire petroleum industry is more or less romantic in its nature, and it is quite certain that if the atmosphere of the business is not radically altered, and if the men who built it up from a small beginning are permitted to continue to operate it, they will rise to the occasion and meet every requirement of the emergency which exists in the present national crisis.

GLASS PLANTS TO CLOSE

With the first operating period allowed manufacturers of window glass by the United States Fuel Administration at an end and the closing of approximately forty-five such plants, largely distributed through the States of Pennsylvania, Ohio and West Virginia, a statement made public recently by John R. Johnston, secretary of the National Association of Window Glass Manufacturers, shows that the early closing order has resulted in a great saving of fuel, labor and freight capacity. With the exception of fifteen plants in which operations began to continue until July 1, manufacturers of window glass throughout the United States were to-day putting out their fires.

The curtailment of output in the window-glass trade, according to the statement of Secretary Johnston, will result in the saving of 450,000 tons of coal, 18,000 freight cars, and release 5,500 workmen for other labor. The direct loss to glassblowers, the statement says, will approximate $3,000,000, although this will be reduced by earnings in other industries. The shortage in window glass resulting is estimated at 5,500,000 boxes, or about half the yearly output of 11,000,000 boxes.

EDITORIAL COMMENT

EDITORIAL BRIEFS

IT IS not too early to boost spring paint sale in a big way. Painting should be one of the big features on every "Conservation" program this year.

* * *

IN THE customary bungling manner Canada's Minister of Trade and Commerce has caused unnecessary uneasiness and alarm by making premature non-committal statements regarding proposed taxation and embargoes.

* * *

THERE never was a time in the history of the hardware trade when there was greater need for co-operation between all branches of the trade, manufacturing, wholesale and retail. Only by close co-operation can the best results be secured. Business to-day, so far as hardware is concerned, is being conducted on a more sane basis than ever before and co-operative competition will help to maintain this desirable condition.

ACCESSORIES ARE A HARDWARE LINE

AT the inaugural convention of the Retail Automobile and Accessory Dealers' Association held in Toronto during the past week the opinion was expressed by one delegate that automobile accessories were not properly a hardware line but that they belonged to the garage.

One of the points on which various speakers laid emphasis was the necessity for garages to clean up their place of business so that women would have no scruples about entering to get required supplies. If the garage man has let this trade slip away from himself through his methods of conducting his business he should not rail against the hardware man because he stepped in and handled the line under conditions appreciated by customers.

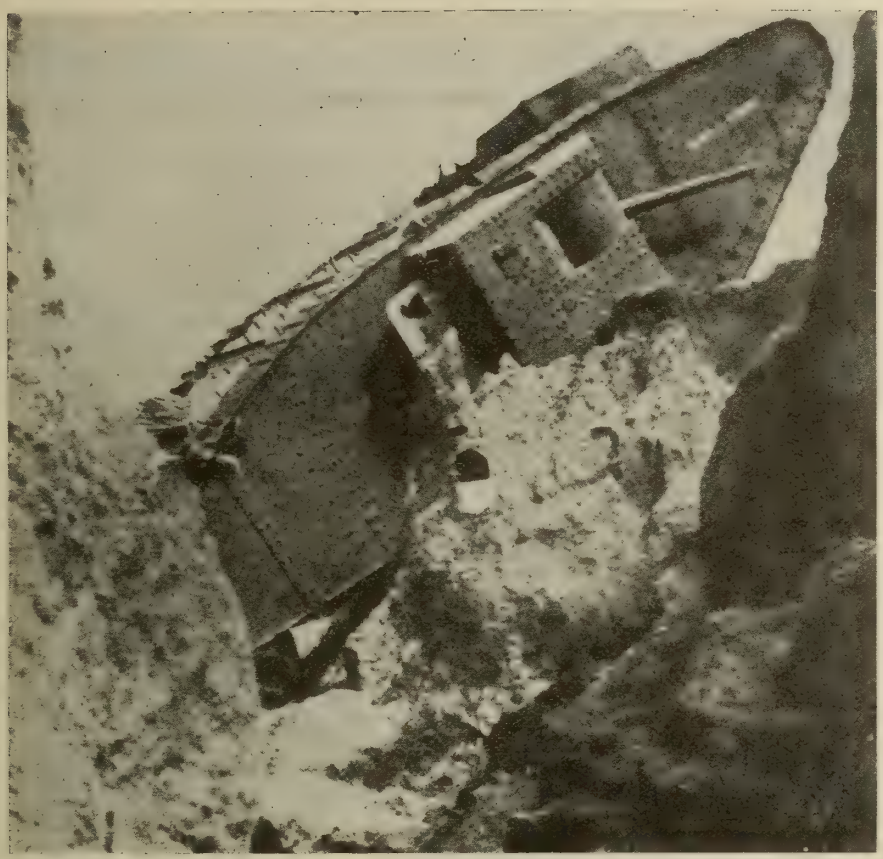
But this factor is not the whole story in connection with the handling of automobile accessories by the hardware man. The garage in its inception was not a place for merchandizing of goods. It was a place for repairing automobiles and giving them other attention. Rarely is it even a place for selling automobiles. The hardware man has taken up with this line because he has heretofore been in the merchandizing business and accessories are but another hardware line that it was logical for him to add to his stock.

REASON FOR REDUCTION IN IRON

THE United States Government recently made effective a new price for pig iron which was $1 per ton lower than the established price prevailing for some months past. Prices of all other steel commodities, with the exception of scrap steel, were left unchanged in price at the previous schedule. Scrap steel was also reduced to the extent of $1 per ton.

The reason for the reduction is given as the desire to favor those producers of finished steel products who have been working around or below cost. Some of the smaller producers of iron and steel were insistent in their demand for higher prices. They pointed out that they were losing money in many instances, and that unless some upward revision was made many of them would have to quit business and production would thereby decrease.

It was not in the interests of the war efforts of the Allies to have production retarded in any way. The reduction in the price of basic materials was accordingly granted as a means toward giving the smaller producers a better chance.



LICENSE RATHER THAN EMBARGO

AUTOMOBILE dealers and accessory dealers have been wrought up during the past week through the announcement in one of the daily papers that the Dominion Government proposed placing a strict embargo on shipment of all automobiles and accessory lines. The War Trade Board, however, during the first part of the week announced that they had not yet come to a decision on the matter. They had been considering the matter, but as yet had made no recommendation.

Advice received from the Chairman of the National Automobile Chamber of Commerce at New York City during the week stated that the Washington authorities had advised that it was proposed to license importation of automobiles and accessories coming into Canada rather than place a strict embargo on all shipments.

Accessory and automobile dealers in Canada are inclined to the opinion that this would be more reasonable than to shut shipments out of Canada entirely. Great hardship would result in many instances through a strict embargo on account of the tying up of investments in many concerns organized to handle these products coming from the United States. It seems reasonable to expect that a system of licensing will be adopted.

Current Events in Photograph—No. 14

SUPPLANTING THE CAVALRY

THIS remarkable photograph of a tank in action was taken during the battle of Gaza in Palestine. It suggests the wonderful adaptability of these new monsters of warfare. The country is obviously not suited for cavalry operations, as the ground the tank is negotiating would defeat most horses.

WHY U. S. CAN'T ANSWER ALLIES' APPEAL

Waddill Catchings, chairman of the War Service Committee of the United States Chamber of Commerce, asserted in an address before the National Wholesale Lumber Dealers' Association at the Waldorf-Astoria Hotel, New York, that the United States was unable to respond to "frantic appeals" to send more troops to France. He declared Washington is filled with "office boys" instead of able business men. President Wilson, he said, had snubbed the United States Chamber of Commerce and deferred to organized labor. His auditors applauded him.

"Frantic appeals to us to send troops to Europe to reinforce the lines of our Allies in this time of grave anxiety can have no effect," he said. "The utmost we can do is measured by what we did last year. Any call for help now cannot be met by any helpful response.

"It has been said this was not a war of armies, but a war of nations, and our business problems are the far-reaching issues of the war. We cannot regard this as a struggle for the month. We must reckon our resources for a year from now.

"In this war business interests have not had their part. I am going to speak frankly, for this is no time to be making statements just to be polite. There are few business men in the councils of the nation. On the contrary, there is the finest aggregation of office boys in Washington I have ever seen. Unless business men are taken into the councils of the Administration without further delay this war is going to be lost. There is no overhead organization at Washington made up of business men. I know whereof I speak, for we of the patriotic Chamber of Commerce have tried twice to get an audience with the President and have failed both times."

Mr. Catchings said that in ignoring the Chamber of Commerce invitation to speak in Atlantic City and going to Buffalo to speak at the labor convention President Wilson was only following the trend of thought of the people.

"The people do not trust the business men," he said. "Ever since the insurance investigation this distrust has been increasing. That is why the business man has not been in the councils of the Administration where decisions were reached, or were not reached. That is why the appointment of a college professor to handle the coal problem was more pleasing to the people than the appointment of an expert and a prominent coal operator would have been."—"American Metal Market."

JUDGE GARY ON STEEL PRICES

Judge E. H. Gary, chairman of the United States Steel Corporation, in discussing the steel price fixing announcement by President Wilson, said as follows:

"The prices approved and announced by the President were those which were recommended by the general committee of the American Iron and Steel Institute after consultation with representatives of the different lines. For some of the manufacturers they are very low in view of the increased and increasing cost of production. However, all are disposed to devote their capacity to the interests of the Government. A majority of the producers will realize a fair profit on the average.

"The prices of steel making pig iron and scrap were reduced $1 per ton; it was believed these products could reasonably afford a reduction, but more particularly because the reductions would be of considerable benefit to the makers of finished products who are compelled to buy their melting material.

"The new price committee is giving careful and daily consideration to the subject of costs, and is well qualified to determine what prices are reasonable and will come within the original proclamation of the President."

EVENTS IN THE TRADE

BUSINESS CHANGES

Lang, Sask.—Lang Hardware Co. Selling out.

Hamilton, Ont.—J. F. Mitchell has obtained charter.

Lansdowne, Ont.—E. Latimer & Co., reported selling out.

Montreal, Que.—Larin, Edouard & Co. Lucian Larin registered.

Nepawa , Man.—Ralph & Simpson Partnership registered.

Winnipeg, Man.—Canada Never Break Trace Co. Partnership registered.

Montreal, Que.—J. C. Jones Est. Assets to be sold at auction April 12.

Grenfell, Sask.—Walker & Son. Sold to Grenfell Milling and Elevator Co.

Roblin, Man.—C. H. Burns, hardware and implements, selling to Dunlop Bros.

OBITUARY

Thomas Clohecy, 27 Hilda Avenue, Hamilton, who for a number of years conducted a saddlery hardware store in that city, died on March 27. Deceased was 77 years of age and lived all his life in Hamilton. He leaves wife and three sons.

William R. Andrews, formerly superintendent of the Page Wire Fence Company, Walkerville, died recently on a train near Macon, Ga. Mr. Andrews resigned his position with the company in the fall of last year on account of ill-health and was succeeded in his position by his son, William F. Andrews. His body was taken to Windsor for burial.

INCORPORATIONS

Oshawa, Ont.—The Dillon Manufacturing Company, Limited, has been granted letters patent by the Provincial Government to carry on the business of manufacturers and dealers in barn and stable fittings, including hay carriers, stalls and stanchions, pens, water bowls, builders' hardware, saw tools, scythes, car wrenches and car movers. The capital of the company is to be $75.000. The incorporators named are Richard Burnett Dilon, manufacturer; Gertrude Rolston Dillon; William George Henderson, sales manager; Oliver Roscoe Durrant, mechanic; Harriet Rolston, widow.

MONTREAL AUTO TRADE MEETS

The sixth annual meeting of the Montreal Automobile Trade Association elected the following officers: President J. O. Linteau; vice-president, J. E. Millen; treasurer, N. J. E. Catudal; secretary, J. R. Marlow; directors, W. E. Baker, R. A. Kelly and C. Garceau. The manager for 1917 was retained for 1918, T. C. Kirby.

MONTREAL SPORTMEN'S SHOW

In the forthcoming patriotic sportmen's show to be held at the Auditorium in Montreal, May 4-11, a comprehensive display of all lines of canoes, motor boats and bicycles, motorcycles and other lines will be made. Even at the present time a great deal of interest is reported and space is being secured by numerous firms who propose showing their lines.

In view of the fact that the proceeds of the show are to be given for patriotic purposes, the assistance of the various patriotic organizations is being enlisted and from 50,000 to 60,000 tickets are expected to be sold.

Rollin Kirby, in New York World.
Trying to Save Him.

CHANGES IN MACKENZIE, MILNE & CO.

Further information at hand with respect to the reorganization of the Mackenzie, Milne & Co., Limited, hardware and oilwell supplies, Sarnia, Ont., are to the effect that the members of the company withdrawing from the business are D. Milne, Charles Mackenzie and M. Mackenzie. The business continues as before, with P. Paton, the purchaser of the stock of those retiring, as president, actively engaged in the management. The following members of the old executive remain as before, viz., George S. Samis, vice-president; T. F. Towers, secretary-treasurer; J. A. Farquharson, director. The company has purchased the metallic lifeboat building business of Watt & Sons, Collingwood, and will add this and other lines of ship supplies to those at present carried.

NEW BRUNSWICK NEWS NOTES

T. H. Bullock, formerly manager for the Imperial Oil Company, and John H. Thornton, manager of the Consumers Cordage Company, Ltd., will be among the candidates for the offices of city commissioner at the approaching civic elections in St. John.

The St. John members of the Maritime Travelers' Association took a leading part in a big drive for funds for the Soldiers' Comforts Association in St. John on March 30.

The master plumbers of St. John have rejected the offer made by the plumbers who have been on strike for nearly a year and the negotiations are off.

Equipment for the spring log drives and for the maple sugar season are featured in New Brunswick hardware establishments just now.

William Todd, born at Milltown, N.B., 83 years ago, one of the leading hardware merchants of Calais, died recently. In 1865 he, with his brother E. Albert Todd, established the business of Todd Brothers, which later was incorporated with William Todd as president, an office he held until the time of his death.

NEW UNIT FOR T. McAVITY & SONS

T. McAvity & Sons, Limited, St. John, N.B., have taken another step forward in the improvement of their facilities. Before the war began they had perfected plans for the consolidation of manufacturing and foundry end of their business in a new plant on the outskirts of the city, with the intention eventually of abandoning the present facilities which are located in various parts of the city. The war hampered the plans but they went ahead with the construction of one unit, which is a model of its kind. Now they have decided to go ahead with the construction of another unit on the same lines but with larger capacity. The contract has been awarded to Grant & Horne and ground will be broken next week. When completed it is expected that the cost of the new plant and equipment will be in the vicinity of half a million dollars. Five hundred additional hands will be requred as the erection of the additional plant is required now to provide for the expansion of their business while the other buildings will continue to operate at full capacity.

MONTREAL NEWS NOTES

A. T. Black, general manager of the Martin-Senour Company, Montreal, was a business visitor to Toronto this week.

Morris Wheeler, representing Sargeant & Co., of New Haven, Conn., was a visitor to Montreal this week in the interests of his firm.

H. T. Kneeland, of the Manhattan Brass Company, New York City, has been in Montreal this week in the interests of his firm.

Mr. Gibson, representative of Oneida Community, was in Montreal, where he called on the trade in the interests of his company.

Beverley Robinson, president of B. & S. H. Thompson & Co., Ltd., is in the Maritime Provinces this week in his firm's interests.

FIRE DESTROYS GLASS WORKS

Fire caused the loss of a two-story building of the Jefferson Glass Company, 388 Carlaw Avenue, Toronto, on Sunday last, the extent of the loss being placed in the neighborhood of $30,000. The building was insured, but about 200 employees will be thrown out of work. The fire started in the engine-room and spread rapidly to other parts of the buildings.

KILLED BY BOILER BLOW OUT

William Hearst of 527 Eastern Avenue, Toronto, was killed by being struck on the head by a steam plug which blew from one of the boilers of the British Forgings Company. He was passing the boiler at the time of the blow-cut and was felled to the floor, sustaining it is believed a fracture of the skull which caused his death.

GLIDDEN COMPANY ABSORBS PAINT COMPANY

The Glidden Varnish Company of Cleveland, O., has taken over the Whittier-Coburn Company of San Francisco, manufacturers of paints and varnishes. It is the purpose of the company to continue the business as the Pacific Coast plant and office of the Glidden Company.

CHANGES IN HARDWARE STAFF

George F. Irons, for the past eleven years with the James Walker Hardware Co., Ltd., of Montreal, has joined the sales force of the Yale and Towne Co. His engagement dates from April 13. Mr. Irons spent some years in New Zealand, where he was engaged in business on his own account and subsequently he was in business for several years in England. In April, 1907, he joined the staff of the James Walker Hardware Co., Ltd., and has been with them since, for some time having charge of the builders' hardware department. At the time of his resignation he was a shareholder and director with the Walker Company. Since the resignation of H. Holden ,formerly secretary-treasurer of the Walker firm in December last, they have suffred the loss of two of their best men, John A. Fraser, now with Lewis Bros., Ltd., as sales manager and also at the present time, Mr. Irons. The territory to be covered by Mr. Irons will extend from Port Arthur to the Coast and he will eventually make his headquarters in Vancouver.

CANADIAN WHEELMEN MEET

The thirty-ninth annual convention of the Canadian Wheelmen's Association was held on Saturday of last week at the Queen's Hotel, Toronto. Alderman Louis Rubenstein of Montreal presided over the deliberations of the association. President Rubenstein announced that the National Championship meet would not be held this year on account of so many racing men now being absent on military duty. The report of the secretary, Harry Richard, showed that over $700 had been realized during the year 1917 through the staging of a bicycle race meet in Toronto during August. The money had been turned over to various military hospitals.

CONDUCTING TRACTOR SCHOOL

The International Harvester Company opened a tractor school at E. F. Cooke & Sons' warerooms, Orillia, on April 2. A series of charts and lantern slides will be used to illustrate the subjects pertaining to farm tractors. All farmers were urged to be present to see what the tractor can be expected to do and also to learn something of its operation.

BROOM OUTLOOK GLOOMY

In Illinois where a large proportion of broom corn is raised, farmers have been instructed by the food administration that they may not plant more than ten acres of each one hundred and sixty acres in broom corn this season. It is pointed out by broom men that if a similar order were to be issued in Kansas and Oklahoma the heavy shortage of broom corn resulting would enhance values to a point far beyond the reach of the average housewife. A recent convention of broom manufacturers in Chicago received reports which presented a gloomy outlook not only for the broommaker but for the purchaser. Consideration of the situation in the broom trade is the object of a meeting to be held the latter part of this month or in May by the Central States Broom Manufacturers' Association.

BOWLERS TO COMPETE IN BUFFALO

The Simonds Saw Companies, manufacturers of saws and machine knives, are to stage an inter-company bowling tournament at Buffalo on April 19 and 20. Two teams will represent each of the Simonds factories located at Fitchburg, Mass.; Montreal, Que.; Lockport, N.Y.; Chicago. The winning team is to be presented with the Olson trophy at a banquet to be held at Buffalo following the close of the tournament. The Montreal team of the company won the city championship in 1915, 1916 and 1917. An interesting time is anticipated in view of the rivalry among the various teams.

CATALOGUES and BOOKLETS

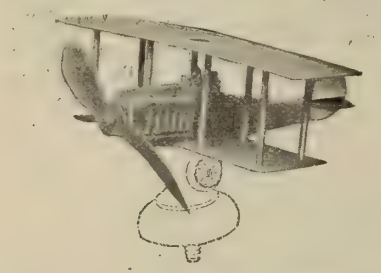
Souvenir Booklet

The Greenfield Tap and Die Corporation, of Greenfield, Mass., has issued a souvenir booklet in very artistic design, the occasion being the opening of the new administration building of the company. The history of the company is given in detail together with illustrations showing some of the groups of the first employes of the concern. Interwoven in the history of the company is the history of the development of the tap and die industry. The booklet also contains various views of the new administration building. It is printed on tinted paper stock and is a very fine example of the printing art, thereby reflecting much credit on the Greenfield Tap and Die Corporation. An insert carried inside the front cover is a photo of F. O. Wells, president of Wells Brothers, one of the companies comprised in the corporation.

Marine Specialties

A splendidly illustrated 58-page booklet, designated Bulletin No. 50, featuring marine specialties, has been issued by the James Morrison Brass Mfg. Co., Ltd., Toronto. A wide range of marine specialties, including such lines as valves, injectors, whistles, ship gongs, gauges, and many other steam and water specialties, are featured in the booklet. It is gotten up in convenient form, and not only gives the dimensions of the various products featured, but also quotes list prices. Copies of the booklet will be supplied upon request.

Howland's Spring Bulletin



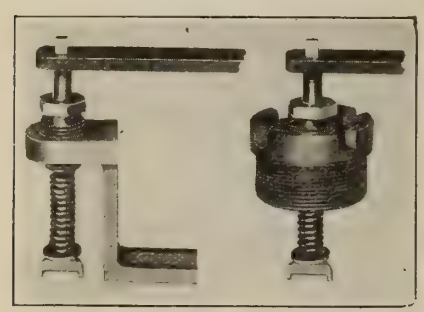
The special spring number of Howland's monthly bulletin is one of the most attractive and interesting as well as practical of any spring hardware catalogue ever issued in Canada. It consists of 176 pages and is splendidly illustrated, many of the illustrations in colors. The goods featured cover an exceptionally wide range and are arranged in such a manner so as to be of most practical use to the retail hardware merchant and his sales staff. Many catchy and interesting headings have been inserted on various pages throughout the bulletin emphasizing the importance of the production of food-stuffs during 1918. The front cover of this bulletin is a most appropriate one and the illustrations throughout the bulletin are of a high order.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

AIRPLANE RADIATOR ORNAMENTS

The Art Metal Works, Inc., 7-15 Mulberry Street, Newark, N.J., is placing on the market the airplane radiator ornament, which is a model of the real aeroplane. It sails along on the radiator cap with the propeller blades whirling in

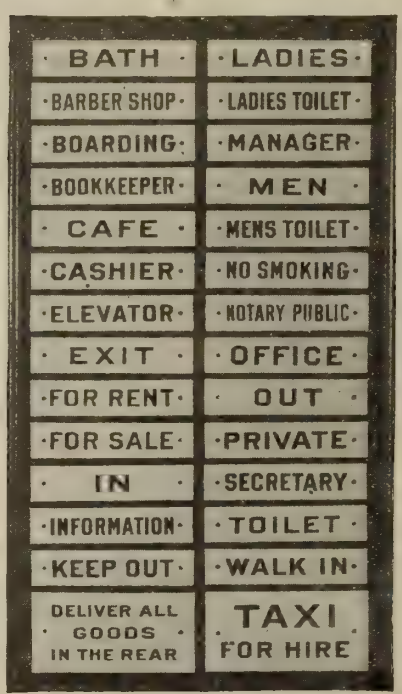


Airplane Radiator Ornament.

front. It is asserted that every detail of the real aeroplane is carried out in this model—vents in the radiator hood, the silhouetted spokes of the wheels, the camouflage grey paint, with a slight upward tilt of the planes to add the final touch of realism. It extreme width it is 7 inches, height from base 3¾ in., length from propeller to rudder 6¼ in. The forward motion of the car revolves the propeller blades and the effect of the whole suggests speed. The ornament is weighty and made of solid metal, planes being of heavy sheet steel. It comes equipped with bolt, washer and nut at base, and can be attached to any ordinary radiator cap in a very short time.

NEW VALVE GRINDER

W. C. Brown, Niles, O., is placing on the market for Kandikid valve grinder, which is designed to be used on automobile motors, motorcycle motors, truck motors, motor boat motors, airplane motors.



Kandikid Valve Grinder.

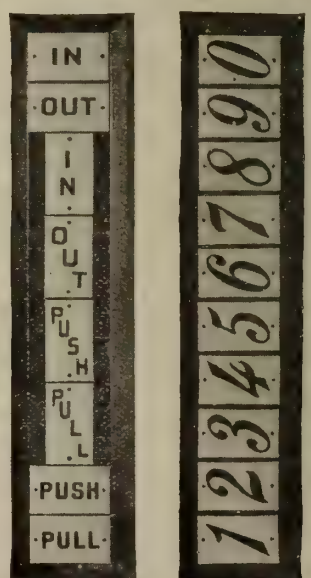
It is stated by the manufacturers that on motors with removable head the grinder is fastened by a cap screw in-bolt used for fastening down the head, holding rigid the Z-shaped support for the grinding post. It is claimed for this grinder that a valve located under the dash board and hard to reach can be ground just as easily and accurately as any other. For motors with removable spark plug bases the Z support is discarded and one of the spark plug bases taken from the motor is used instead by inserting the pressure block in place of a spark plug.

PORCELAIN HOUSE NUMBERS

The Kimball-Dieterich Hardware Co., Elgin, Ill., are placing on the market what is claimed to be a new and practical line of porcelain enamel on steel house

"Elgin" porcelain enamel signs.

numbers and small signs under the brand name of "Elgin." In this style of house numbers and signs it is asserted the user finds something that is practical, durable and inexpensive, being porcelain enamel the weather has no effect upon same and they will last indefinitely. For the convenience of the trade they are put up in neat paper containers and the house numbers are packed with brass screws. They are put up in assortments and suitable display boards are furnished gratis.



BAGGAGE CARRIER FOR AUTO

The Beaver Motor Device Co., Buffalo, N.Y., is placing before the trade the Beaver baggage carrier, which it is claimed is simple in construction and yet

Beaver Baggage Carrier.

will do the work effectively. The device is used as an attachement to the running board and consists of three parts. There is the socket which fastens to the side of the running board together with a rod made of malleable iron heavily plated which fits steadily in the socket. There is a strap of extra tough fabric, which is readily adjusted to hold the luggage tightly in place. The strap passes up from the socket over the luggage, around the rod and back to the socket. It is claimed the adjustment can be made in short time and with very little effort.

"Elgin" porcelain enamel numbers.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

FURTHER declines in turpentine have occurred following the weaker tone of the primary market, 62c to 67c per gallon now being quoted. Reports from the States indicate a possible withdrawal of coastwise shipping for government use and this will affect supplies of turpentine reaching Canada. Present stocks are ample for the demand but the future contains an element of uncertainty.

Linseed oil has held in a very steady market during the week. Supplies of seed coming through during the past couple of weeks are practically nil and stocks of oil are becoming increasingly scarce. Some improvement in movement of seed is hoped for on the opening of navigation. Orders for oil for delivery during the next couple of weeks are being accepted in some quarters where shipments are en route. Orders for mixed paint are going forward freely.

In at least one of the United States the acreage devoted to broom corn is to be restricted and should other State food administrators rule similarly, a heavy shortage is expected to result. This will enhance values to a point where brooms would be prohibitive from the average housekeeper's standpoint and the question of a substitute will more than likely engage the attention of manufacturers.

A slightly easier tone is evident in the lead market and quotations are from ¼c to ½c lower per pound than formerly ruling. The position of tin remains rather acute and stocks held locally are gradually being cleaned up. Little disposition to offer stocks at any lower prices is evident.

Crude oil is reported as likely to go higher and this will affect refined still further. A shortage in fuel oil exists at present.

Included in the list of lines to advance is a 20% jump in one line of revolvers and shotguns. All lines of game traps are also higher, a 10 per cent. increase having been put into effect. Lamp and stove wick, metal polish, fibreware and woodenware pails and tubs, wrenches, drawknives and lock washers are all included in the list of goods to follow the upward trend of prices.

MONTREAL MARKETS

MONTREAL, April 4.—The state of trade is better in the country than in the city and is reported quite active. With the opening of navigation in prospect within a few weeks, jobbers state that there will be a considerable amount of activity and there are already in hand some good orders for shipment then. There are a few changes, among these being declines on motor generator sets and certain fasteners for automobiles. Old heavy and light cast iron is firmer Fibreware is higher. Shovels, spades and other lines of handled tools will perhaps be higher in sympathy with the situation on handles. Wrapping paper is easier. Seine twines are firm. Game traps are up about 10 per cent. Revolvers and cheap shotguns are higher. Crowbars and claw bars are higher. The general tone of the market is to firmness.

Coil Chain Is Advanced; Shovels, Etc., To Go Up

Montreal.

COIL CHAIN, SHOVELS, ETC.—There has been a revision of coil chain prices and these are made effective at once. The same will be found in the current market quotations elsewhere. Some of the prices indicate a decline and others advance. They are applied to fireweld and electricweld. There is a strong probability of an upward revision of shovel and harvest tool prices in sympathy with the recent readjustments on handles.

Game Traps, Revolvers And Cheap Guns Are Up

Montreal.

GAME TRAPS, REVOLVERS, GUNS.—Advances are announced on game traps and these will be effective this week. It approximates about 10 per cent. Some of the changes are relatively as follows: Victor No. 0 with chain, was $1.75, now $1.90 per doz.; No. 1, $2.05-$2.20; No. 2, $4.30-$4.60. Cheap single barrelled guns are selling at $10.50 for the non-ejector model and for the ejector pattern, $11. The Iver Johnson 32 B revolvers are selling at $12.60 against a former price of $10.85 and the 32 N at $12.25 against the old price of $10.50.

Fibre Tubs Up; Wrapping Paper Down

Montreal.

FIBRE WARE, PAPER.—Advances have been made in all lines of indurated fibreware excepting Twin Beaver wash boards. This is equal to about 5 per cent. The tubs are now selling as follows, per dozen: No. 0, $21,75; No. 1, $18.40; No. 2, $15.60 and No. 3, $13.20. Prices are effective immediately. A reduction of 50c per 100 pounds is made by some on kraft wrapping paper.

Carriage Heaters, Claw Bars, Twine Higher

Montreal.

CARRIAGE HEATERS, CLAW BARS, ETC.—Advances have been made of 10 per cent. on list for Clark carriage heaters. In addition to this announcement comes one regarding the discontinuance of the cheaper grade of coal, and the better only will be made from now on. Seine twine is very firm and some have marked prices up. Claw bars are up.

Generator Sets For Automobiles Are Down

Montreal.

GENERATOR SETS.—Among the changes for the week is one of motor generator sets. This is on the "60-Cycle Outfits" and some of the relative list prices are as follows. Numbers 2 B, old list, $178, new list $153; No. 3 B, $193.50-$183.50; No. 4B, $249-$244.50. On the "25 Cycle Outfits" of the 2 B style the old list of $218.25 is reduced to $178; the 3 B from $291 to $201.50 and the 4 B, $339.50 to $270. The discount is 10 per cent. to the trade.

Curtain Fasteners Are Revised To Lower Levels

Montreal.

AUTO ACCESSORIES.—There has been a decline in the prices on curtain fasteners for automobiles and these are immediately effective. Single pattern, to screw to wood have a new list of $1.10 against a former one of $1.20 and the double to screw to wood are taking a list of $1.50 against $2.05. The single style to clinch on canvas are now listed at $1.15 the former list being $1.60 and the double pattern $1.50, with a previous list of $2.10. On lots of six the usual discount of 37½ per cent. applies.

Better Outlook For Stoves And Stamped Wares

Montreal.

STOVES, WARES, ETC.—There is a decided improvement, HARDWARE AND METAL is definitely informed, in the delivery of the raw materials needed by stove and ware manufacturers. This has enabled them to assemble the needed supplies of manufactured oil stoves, pails, enameled ware and other lines on an uninterrupted working schedule, and they are now hopeful of a continued good trade. Sales of sap supplies have been especially heavy, and it is stated that all the buckets available have been picked up. The stove business is normal, interest being fairly well maintained and prices held unchanged.

Normal Business For Gasoline, Coal Oil, Etc.

Montreal.

COAL OIL, GASOLINE, ETC. — There has been a better condition with respect to the delivery of booked orders for such lines as are in evidence among the oil men, than at this time last year. The conditions a year ago did not permit of as prompt shipment as this, say the importers and refiners, and they expect to have goods in the hands of their trade in good season. Sales of coal oil are still maintained in fairly good volume, while there is naturally a gradual improvement in the gasoline demand. Prices are held unchanged and these are as follows: Gasoline, 34c per gallon; coal oil, Royalite, 19c and Palacine and Electroline 22c per gallon.

Rope Trade Is Light Except Shipping Needs

Montreal.

ROPE AND CORDAGE, ETC.—There is no great demand for rope from the ordinary trade channels, and this is probably more confined than ever for the immediate present. There is, however, a better outlook for the demand from shipping interests, but the same will not be manifest in an active sense before the navigation season opens. This will be late, from present indications. Prices are held unchanged and there is less likelihood of immediate revisions upward than obtained a few weeks ago. Prices having been fixed by the United States Food Administration Board, the situation is more likely to now remain normal and unchanged here. Prices, pure Manila, base, 39c; British Manila 33c and sisal 27½c per lb.

Wire And Cut Nails Will Soon Move

Montreal.

WIRE AND NAILS.—At the present time there is a good prospect for the trade in wire nails and wire products, as relating to the near future. Enquiries and orders from the country are satisfactory and the various jobbing houses are now anxious to see the opening of navigation. There are many, served by water routes, who defer the buying of their requirements as long as possible. Prices hold unchanged and wire nails are selling still on the base price of $5.25, cut nails $5.60 and smooth steel wire at $6.25 base.

Better Request For Iron And Steel Bars

Montreal.

IRON AND STEEL.—There is a better tone to the iron and steel market. Supplies are fairly well maintained and the country demand is better than that from within the city. The opening of navigation will also further improve the demand, it is expected. Prices are maintained without change and stocks are fairly well maintained.

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05

Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 20-0 21

Sheets And Plates Are Likely To Be Unchanged

Montreal.

SHEETS AND PLATES.—It is stated here that there is unlikely to be any interference with prices on galvanized or black sheets of the ordinary and lighter grades. There may be a little readjustment, locally, but it was pointed out to HARDWARE AND METAL that the fixing of prices across the line by the U.S. Government would probably leave prices much as they are for the next six months. In interviewing one of the large importers, he stated that those requiring any heavy plates for regular trade purposes would do well to secure any supplies they needed, wherever possible, as the possibility of getting these for other than government requirements was very remote. This applies to the heavier gauges, of course. Prices hold unchanged. Deliveries of copper sheets are much delayed in view of the fact that U.S. Government orders across the line are urgent and heavy.

BLACK SHEETS—		100 lbs.
10 gauge	$8 00	$11 50
12 gauge	8 65	10 50
14 gauge	8 80	7 90

20 ga.		8 85
18 ga.		8 85
16 ga.		8 70

Lead Products Will Move Better Very Soon

Montreal.

LEAD PRODUCTS.—There will be a better movement of manufactured lead products, think the jobbers, in the near future. Orders are already on hand for shipment to points on water served routes and shipment is awaiting the opening of the lakes and rivers. For the immediate present there are no large sales being made, and prices, while unchanged, have a tendency to be easier, excepting in solders.

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....

Better Prices For Heavy And Light Cast Iron

Montreal.

OLD MATERIAL.—While there is not a great deal of movement in the old metal market, there is a feeling that the opening of navigation will make a change for the better. Demand is most active for light and heavy cast scrap iron, and the prices are consequently improved. No. 1 machinery scrap is now bringing $32 to $34 per ton, and stove plate $20 to $22. Old rubbers are a little firmer, there being less spread in the range of prices and 8½c being the minimum quotation for these. In a general way prices are firm, but unchanged.

Tea lead	$ 0 05	$0 06½
Heavy lead pipe	0 06¼	0 06½
Yellow brass	0 13½	0 14

Licenses Are Expected For Ingot Tin Imports

Montreal.

INGOT METALS.—There is not a great deal of change in the conditions affecting the market beyond what was reported a week ago. There is little movement of most commodities, and trading generally is of small compass.

COPPER.—With sales normal and steady the market holds unchanged. Demand will probably improve some with the return of navigation. Prices, 33-34c lb.

LEAD.—There is an easier tendency in the pig lead market, and the demand is light here. Prices rule from 10c to 10½c lb.

TIN.—News is better regarding the probability of being able to secure tin after a few weeks. Several importers state that there is now more likelihood of securing the product from England. Prices rule firmly at $1.05 per pound.

SPELTER.—There is an easier tone here as a reflection of the United States position, and prices are quoted around 10c. lb.

ANTIMONY.—The demand for this is very limited, and with a dull market prices are ruling easy around 17c.

ALUMINUM.—Not much activity at the present time. With United States prices fixed it is probable that there will be a more normal condition both as to trading and price locally. Price, 50c to 52c lb.

TORONTO MARKETS

TORONTO, April 4. — Further changes in cotton goods are apparent in new prices issued on lamp and stove wick which provide for an advance. Fibreware pails and tubs are higher, and manufactured woodenware has also reached higher levels. Revolvers and shot guns in one line registered a 20 per cent. advance, while game traps show 10 per cent. higher in new discounts issued. The demand for building material though not heavy continues to show improvement, and the fine weather of the past few days has undoubtedly been a factor in this regard. Business generally is improving and reports from retailers and wholesalers are very optimistic.

Stocks and Dies Higher; Taper Pins Up

Toronto.

STOCKS AND DIES, PIPE CUTTERS, TAPER PINS.—An advance of about 10 per cent. in Beaver pipe stocks and dies has been recorded during the week. Beaver pipe cutters have also undergone revision upward, and quotations now being made for No. 1, $18.00; No. 5, $20.00, with a discount of 10 per cent. applying. Taper pins have also acquired a new discount, the Nos. 0-5 being quoted at 45 per cent; No. 6 and larger, 40 per cent.

Lock Washers Higher; Metal Polish, Too

Toronto.

LOCK WASHERS, METAL POLISH. —Further revisions have been found necessary in lock washers, and quotations representing an advance on some sizes are given as representative of the entire list; 5-16-in. are now selling at 40c per hundred; ⅜-in. 50c; ½-in. 65c; ¾-in. $1.90; 1-in. $2.85. An advance in the price of metal polish is apparent in quotations on Bon Ton given herewith: ¼ pints, $1.15 dozen; ½ pint, $2.10 dozen; 1 pint, $3.15 dozen.

Game Traps, Revolvers and Guns Advance

Toronto.

GAME TRAPS, REVOLVERS, GUNS. —A 10 per cent advance has been made in game traps during the week but net prices are not yet available. However, the probable list of prices will be in the neighborhood of the following: Victor No. 1, about $2.25 per dozen; Jump, No. 1, about $2.90 per dozen; Hawley and Norton, No. 1, about $3.45 per dozen; Newhouse, No. 1, about $4.75 dozen. New prices have been set on Iver Johnson revolvers and single barrel guns which range as much as 20 per cent higher than quotations formerly ruling. This action has been found necessary owing to difficulty of securing proper grade of steel and continued cost of production.

Wrenches Advance; Garden Trowels Higher

Toronto.

WRENCHES, GARDEN TROWELS, SNOW SHOVELS. — Knife handle wrenches and engineers' wrenches have gone to higher levels during the week. Engineers' wrenches, which formerly sold at a discount of 7½ per cent. from list are now selling at net list. New prices on Coe's knife handle wrenches are: 6 inch, $13.50; 8 inch, $16.00; 10 inch, $19.00; 12 inch, $24.50; 15 inch, $32.00; 18 inch, $42.25; 21 inch, $53.00 dozen. Garden trowels and child's snow shovels have gone up about another 10 per cent. Present quotation on No. 10 child's snow shovel is $1.60, on No. 22, $1.85 dozen.

Draw Knives Go Up; Bench Axes Show Range

Toronto.

DRAW KNIVES, BENCH AXES.— A new price issued on draw knives shows quotations higher than formerly ruling. Present prices being asked are for 8 inch, $11.50; 9 inch, $12.00; 10 inch, $12.50; 12 inch, $14.00 dozen. Quotations on bench axes at net list are being made which provides a range of values as shown in current market quotations. Prices now being named are: No. 2, $12.50; No. 3, $13.50; No. 4, $14.50; No. 5, $16.50 dozen

Fibreware Pails, Tubs And Stroppers Revised

Toronto.

FIBRE PAILS, TUBS, STROPPERS. —Star fibre pails and tubs have undergone revision upward during the week, prices now prevailing being at considerably higher levels. Fibre pails are now being quoted at $4.60 per dozen net. Fibre tubs No. 0 are selling at $20.70 dozen; No. 1 at $17.75; No. 2 at $14.85, and No. 3 at $12.60. Prices on the Twinplex stropper is shown at $3.25 each.

Cotton Goods Higher, Lamp Wick, etc.

Toronto.

COTTON LAMP WICK, STOVE WICK.—Following the advances made in cotton twines, rope, clothes line, sash cord, etc., lamp and stove wick have followed suit and new prices being asked to-day are shown below. Safety fuse is also among the list of goods advancing, $8.60 per M feet being to-day's higher quotation. Prices on wick are:

		Gross	
Lamp wick—	Nutmeg	$0 58	$0 65
	O	0 70	0 75
	A	0 87	0 95
	B	1 28	1 35

	5 in.	9 60	10 20
			Doz.
Oil heater wicks, New Perfection, no carrier			$2 60
Oil stove wicks, New Perfection, with car.			3 50

Coal Oil and Gasoline Firm; Fuel Oil Scarce

Toronto.

OILS, GASOLINE.—Refined oils remain very firm at advances recorded last week. Crude oil from all appearances is going higher and the result on refined is likely to be the same. No change of great moment is noticeable in respect to gasoline, the sale of which is showing greatly increased volume, as motoring increases with the fine weather prevailing. Lubricating oils record no change during the week, prices remaining steady as noted in current market quotations. Royalite coal oil is now selling at 18c per gallon; Palacine at 21c per gallon, and gasoline at 33c per gallon.

No Change In Wire Nails Recorded

Toronto.

NAILS, WIRE.—The demand for wire nails continues in fair volume, and indications from the country are that farmers will be doing a fair amount of building during the spring and summer months. The market on nails is very firm, though the base price of $5.20 per 100 pounds shows no change. Smooth steel wire remains firm and unchanged at $6.25 per 100 pounds base. Cut nails show no variation in the base price of $5.65 per 100 pounds.

Demand For Stoves And Enamelware Heavy

Toronto.

STOVES, ENAMELWARE. — The greatest difficulty experienced just now is filling orders, not in securing the business. The demand for enamelware has been splendid, but an increasingly long

list of "shorts" is greeting the retailer along with his invoice. Summer lines of stoves, oil, gasoline, electric and gas, continue to move out freely, and in these again the situation may be said to be heading towards shortage of supplies. Already a big movement of these lines has been apparent and the future presents uncertainties as regards providing the goods. Orders for stoves and ranges for summer delivery are being booked in good volume and indications point to another 10 per cent. advance in prices applying on fall orders.

Iron And Steel Shows Little Change

Toronto.

IRON AND STEEL.—The interest in iron and steel bars is by no means great, though a fair movement is reported to the retail trade. Prices show little disposition to change, and all lines remained firm at quotations as given below.

TORONTO—	Per 100 lbs.	
Common bar iron	....	$ 5 25

Mining drill steel	19 00	30 00
Sheet cast steel	0 42	0 45
Tool steel	0 20	0 42

Sheets Continue To Show Improvement

Toronto.

SHEETS, PLATES.—The situation in respect to sheets is gradually showing improvement both as regards receipt of supplies and volume of outgoing business. Shipments from the mills are being handled with greater despatch by the railways and stocks are becoming better with a more nearly complete range of sizes in each gauge. The demand is good, and with continued fine weather conditions bringing an early spring is expected to further improve. Galvanized sheets range in price from $9 to $10.50 per 100 pounds for 10¾ oz., with other gauges proportionately figured. Black sheets reveal no tendency towards revision, and prices on both black and galvanized are shown herewith.

BLACK SHEETS—	Per 100 lbs.	
10 gauge	$10 00	$12 00
12 gauge	7 55	10 10
14 gauge	7 45	8 40

14	7 85	8 10 9 35

Business Improving In Corrugated Sheets

Toronto.

CORRUGATED SHEETS, EAVETROUGH.—Steady improvement marks the demand for corrugated sheets, eavetrough, conductor pipe, etc., with the advent of real spring-like weather. The demand has not yet reached a point where overtime is required to fill orders, but the amount of business being handled is proving quite satisfactory. Shipments of sheets are coming along considerably better, and further supplies will do much to relieve a situation which was at least threatening as regards output. Prices on corrugated sheets below are unchanged; prices on eavetrough, conductor pipe, etc., which appear in current market quotations, are the same as before.

TORONTO—	Per 100 Sq. Feet Galvanized	Painted
No. 28 gauge	$ 8 25-$ 8 75	$6 75-$7 25
No. 26 gauge	9 00- 9 50	7 75- 8 25
No. 24 gauge	13 00-	10 50

No. 20 gauge	19 00-	16 50
No. 18 gauge	23 00-	20 00

Discount 7½%.

Wrot. Iron Pipe Steady; Boiler Tubes Scarce

Toronto.

WROUGHT PIPE, BOILER TUBES.—A steady tone marks the market in wrought iron pipe, and a fair demand is reported. Orders seem to be limited to present requirements, and no heavy buying is in evidence. The boiler tube market is practically bare of supplies. Few, if any, shipments are reaching the city, and little expected before another month or more. Stocks in May will, it is thought, reach more nearly normal proportions. Prices shown below are unchanged. Prices on wrought iron pipe appear in current market quotations.

Boiler Tubes—	Cold Drawn	Lapweld
1 inch	$36 00	$ ....
1¼ inch	40 00	....
1½ inch	43 00	36 00

3¼ inch	....	58 00
3½ inch	77 00	60 00
4 inch	90 00	75 00

Lead Somewhat Easier; Products Unchanged

Toronto.

LEAD AND ZINC PRODUCTS.—Lead in the primary markets is somewhat easier, and this is reflected in the metal market here. However, no change in the manufactured products has been made, lead pipe remaining at 14c per pound. Solder remained steady during the week and prices were unchanged at advances recently recorded. Strictly is selling at from 46¾c per pound in half-ton lots to 50c in smaller quantities. Quotations now being made are noted below:

Lead pipe, lb.	0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	
Lead wool, lb.		0 16
Lead sheets, 3 to 3½ lbs. sq. ft., lb.		0 13¼
Lead sheets, 4 to 8 lbs. sq. ft.		0 12½

Solder, gauranteed, lb.	0 54¾	0 55
Solder, strictly, lb.	0 46¾	0 50
Solder, commercial, lb.	0 42¼	0 50
Solder, wiping, lb.	0 40¾	0 45¼
Solder, wire, lb.	0 50½	0 58½
Zinc sheets, per lb.	0 26	....

Zinc Slightly Easier; Little Movement As Yet

Toronto.

OLD MATERIALS.—Heavy zinc is somewhat easier and a decline of ½c per pound has been made in some quarters, bringing present quotations down to 5½c to 6c per pound. A better demand is apparent during the week, and further improvement is being looked forward to. Present prices are as follows:

Tea lead	$ 0 04½	....
Heavy lead pipe	0 07	0 07½
Yellow brass	0 12	0 13
Red brass	....	0 21
Light brass	....	0 09½

No. 1 busheling	16 00	17 00
No. 2 busheling	....	12 00
Country mixed scrap	....	16 00

Little Interest In Waste Or Oakum

Toronto.

WASTE, OAKUM.—Very little interest is manifest in waste during the week. Orders continue to move forward in good quantities, and plants are operating at full capacity, but a generally uninteresting feeling marks the present situation. Prices as shown in the current market quotations show no change.

Oakum stocks are very light and supplies are not reaching the market in large enough quantities to take care of orders. There is none offering in some quarters at all for the present. Prices are held steadily at figures shown in current market quotations.

Rope Unchanged; Fair Movement Exists

Toronto.

TWINE, CORDAGE.—No change has been made in rope and little of interest obtains in the market situation. There is a fair demand in existence, but not enough to be termed "good" as yet. Pure Manila is being quoted at 39c base per pound; British Manila at 33c per pound; sisal at 27½c per pound. Binder twine orders continue to go forward in good quantities. The opening price of 23½c per pound, 500 ft. basis, is steadily upheld.

Cement Demand Better; Plaster Of Paris Due

Toronto.

CEMENT, PLASTER OF PARIS.—Business in cement is picking up materially, and though by no means heavy, shows great improvement as a result of the fine weather prevailing during the past two or three weeks. Prices remain unchanged at $2.70 per barrel in carload lots, or $3.25 per 100 pounds in smaller quantities. Plaster of Paris at $3.25 per barrel shows no change in quotations. Stocks are coming through very slowly and orders remain unfilled due to transportation troubles solely.

Woodenware Goes Up Another Ten Per Cent.

Toronto.

WOODENWARE.—Another advance in manufactured woodenware has oc-

curred during the week. Net prices are not yet available, but manufacturers state that the advance is 10 per cent. on list issued March 1. Continued difficulty in getting through supplies is experienced, and the question of labor is a serious one with these manufacturers. Prices on clothes pins have been withdrawn, and orders are being accepted only at prices ruling at date of shipment.

Lead Slightly Easier; Other Metals Unchanged

Toronto.

INGOT METALS.—The weakness evident in the primary market on lead is reflected locally, though with little trading reported. The position of tin shows practically no change. Stocks are receding to a low level, and the future remains in a state of uncertainty. Consumption of copper is fairly heavy, and indications are that producers will be able to take care of all demands.

COPPER.—The local market shows no change in the situation during the week, prices holding at about 30c to 32c per pound. United States Government and allied requirements are drawing heavily on producers, but from all accounts there is ample copper in sight to take care of requirements.

TIN.—Little has developed in respect to tin, and those having stocks are carefully guarding same. In the New York market there is little metal offering except Chinese, and it is said that holders are asking fancy prices for this. Hope is expressed that Banca tin may come forward, but when it can be shipped is a big question. Prices locally held up around 95c to $1 per pound.

SPELTER.—The market remains very dull, and little interest is manifest in this item. In the primary market supplies are said to be light and buying interest absent. Prices locally remain unchanged at 9¾c to 10c per pound.

LEAD.—The undertone of the market is easy, and this is reflected in a decline of ¼c in the spread of prices locally, which range from 9¼c to 9¾c per pound. At primary points spot offerings continue to be taken up quickly, but futures seem of little interest.

ANTIMONY.—No change in a situation which is uninteresting is reported for the week. The demand is light and trading, therefore, limited. Prices range from 16½c to 18c per pound on the local market.

ALUMINUM.—Except for Government work there is little offering, and all surplus is quickly absorbed on Government contract. Since prices were set in the United States nothing but quiet prevails in the market. Quotations locally remain at about 60c per pound.

PIG IRON.—Some improvement in the position of pig iron is reported during the week, but operations of furnaces are still somewhat restricted. The month of March showed up better than February, however, and further improvement is looked for in April. Foundry iron remains unchanged locally at $49.50 per ton.

LONDON MARKETS

LONDON, April 4.—Price changes during the week, though not numerous when compared with some previous weeks, reveal a general trend of advances, although a slight reduction in cast enamel sinks has been made. Lines to advance include lamp wick, bench axes, tarred fibre, and wire stretchers. Business has been good during the past week. Spring lines, including garden tools, seeds, poultry netting, wheelbarrows, prepared paint, etc., are in good demand. Collections are good.

Lamp Wick Higher; Wagons Sell Well

London.

LAMP WICK, WAGONS.—Following the trend upward in other cotton lines, an advance has been made in lamp wick during the week, new prices established being as follows:—O, 75c; A, 90c; B, $1.30; D, $2.10 per 32-yard roll.

Coasting wagons are enjoying a good sale now, orders going forward freely. Quotations prevailing are as follows:—No. 00, $22.88; No. 0, $29.32; No. 01, $45.04; No. 1, $54.34; No. 2, $60.06; No. 3, $66.50; No. 4, $75.79 per dozen.

Cast Enamel Sinks Decline; Rope Steady

London.

CAST ENAMEL SINKS, ROPE.—A slight decline has been provided for in the new prices issued on cast enamel sinks. The 16 x 24-inch is now selling at $4.80 each, and the 18 x 30-inch can be bought at $5.50 each.

Rope shows no disposition to change. A large percentage of orders booked for spring have been shipped. Quotations remain firm as follows:—Pure Manila, 39c; British Manila, 33c; New Zealand hemp, 33c; sisal, 27½c per pound base.

Tarred Fibre Higher; Wire Stretchers Up

London.

TARRED FIBRE, WIRE STRETCHERS.—Following advances made in tar and paper, as noted in Toronto and Montreal reports last week, a change in the price of tarred fibre has gone into effect at this point, this commodity for the E2 selling at 72c per roll.

An advance in Townsend wire stretchers to $13.50 per dozen reveals another item following the upward trend existing.

Bench Axes Higher; Spades, Shovels Steady

London.

BENCH AXES, SPADES, SHOVELS.—New prices have been adopted on bench axes, this line selling at net list. This is an advance over former quotations, and is said to be due to increasing cost of steel, handles and production. Present prices are:—No. 2, $12.50; No. 3, $13.50; No. 4, $14.50; No. 5, $16.50 dozen.

No change in spades or shovels is to be noted in quotations given below. A fair demand exists for these lines for spring trade:—Jones, $14.30; Bull Dog, $14.30; Burns, $13.87; Olds, $12.40; Fox, $12.40; Black Cat, $11.93; Star, $11.93 dozen.

Spring Goods Moving Freely; Prices Firm

London.

SPRING LINES.—Spring lines of garden tools are moving freely, and prices are being firmly maintained. Some items enjoying a very fair sale, with prices applying to same, are:—Buco cultivators, 5-prong, $11.25 doz. Eureka hand cultivators—No. 4, $3.75 each; No. 8, $4.50 each; No. 10, $5 each. Eureka seed drills—No. 1, $7.25 each; No. 2, $9.50 each. Harvest tools, 25 per cent.

Hose, Poultry Netting, Screen Wire Unchanged

London.

HOSE, POULTRY NETTING, AND SCREEN WIRE.—No price changes have affected any of these lines during the week, and business is in fair volume, though not taxing capacity of wholesalers to supply. Quotations being named on these items are as follows:—Corrugated lawn hose, ½-in., 15¾c; ⅝-in., 18¾c; ¾-in., 22½c; 1-in., 31½c; ⅝-in., in full reels of 500 ft., less 5 per cent.; poultry netting, Canadian, 1-in. and 2-in. mesh, 15 per cent.; screen wire cloth, painted black, 100 ft. rolls, $3.50 per 100 sq. ft.; bronze, 14c sq. ft.

Nails Steady; Horse Clippers Moving

London.

NAILS, CLIPPERS, FLY DESTROYER.—Wire nails remain unchanged during the week. Some interest in the building trade is becoming manifest, and this is expected to increase inquiries and shipments to some extent. Wire nails are being quoted at a base price of $5.20 per 100 pounds; cut nails at $5.60 base. A splendid sale of Stewart power horse clippers is reported. No change is to be noted in the price of $8.25 being asked for No. 1. Orders for Dr. Williams' fly destroyer booked for delivery this spring are being filled and shipped out to retailers. Quotations on the ½-gallon cans are $7 per dozen and on 1-gallon cans, $10 dozen.

Linseed Oil And Turpentine Unchanged

London.

LINSEED OIL, TURPENTINE.—Fluctuations in the seed market have not served to alter the price on linseed oil, and the situation might be termed one of extreme firmness. Prices ruling to-day are as follows:

	Raw, per gal.	Boiled, per gal.
1 to 2 bbls.	$2.00	$2.03
3 to 5 bbls.	1.99	2.02
6 to 9 bbls.	1.97	2.00

Less than bbl. lots add 10c gal.

Turpentine, though somewhat easier in

the primary market, shows no change over decline registered last week. Supplies are equal to present demands.

	Imp. gal.
1 bbl. lots	67c
2 to 4 bbl. lots	66c
5-gal lots.	77c

White Lead In Oil Firm; Putty Unchanged

London.

WHITE LEAD IN OIL, PUTTY.—Prices on white lead in oil were firmly maintained during the week, although a slightly easier tone in the metal market is apparent. A slight improvement in the demand is reported, with quotations being made on the basis of:

	Tons per 100 lbs.	Less per 100 lbs.
Pure	$16.20	$16.55
Pure Elephant	16.70	17.05

Putty holds unchanged in a market void of interest. The demand is limited and prices steady at recent advance:—Standard, 25-50-100-lb. drums, $5.40 per 100 lbs.; pure, 25-50-100-lb. drums, $7.40 per 100 lbs.

Glass Advance Sustained; Paris Green Unchanged

London.

GLASS, PARIS GREEN.—The recent advances in window glass have been sustained in a very firm market. A slightly improved demand is apparent with the increased activity in building, but no large orders are being taken into stock by the retailers. Present discounts:—Single diamond, 25 per cent. full case lots; double diamond, 25 per cent. full case lots; cut lights, 10 per cent.

Paris green shows no change in quotations, which are given as follows:

C. P. Co. make—

½-lb. pkgs.	66½c lb.
1-lb. pkgs.	64½c „
25-lb. drums	62½c „
50-lb. drums	61½c „
100-lb. drums	61½c „

WINNIPEG MARKETS

WINNIPEG, April 4. — Price changes for the week show a firmer tendency with only moderate advances. Among the lines affected appear harness hooks, mendets, saw vises, hog ringers, hog tongs, cattle leaders, roofing nails, Perfect Handle screwdrivers, barn door latches, expansive bits, barn door hangers, burlap and door buttons.

Business for the week is very brisk with noted activity in all lines of automobile accessories, bicycles, baby carriages and sporting goods, brought about by the exceptionally fine March weather. The demand for all lines of garden tools is reported as very good, and should the daylight saving bill go into effect sales of these lines will no doubt be greatly increased.

Some Lines Barn Door Latches Move Up

Winnipeg.

BARN DOOR LATCHES.—New prices recently issued by manufacturers include further advances on barn door latches which move up from 5 to 10 per cent. To-day's markets follow: No. 125, $12.60 doz.; No. 126, $12.60 doz.; No. 128, $3.25 doz.; No. 156, $6.50 doz.; No 1240 J, $6.00 doz. New prices, however, do not affect the following lines which hold firm at the following figures: Thumb latches, steel No. 2, $2.00 doz.; No. 3, $2.70 doz.; No. 4, $4.75 doz.; barn door latches No. 5, $2.70 doz.; No. 8, $2.90 doz; No. 9, $5.00 doz.

Expansive Bits, Barn Door Hangers Advance

Winnipeg.

EXPANSIVE BITS, BARN DOOR HANGERS.—Prices on Clark's expansive bits have remained firm for some time past but new prices just out provide for a further advance. To-day's ruling prices are as given herewith: No. 72, $11.25 doz.; No. 71, $16.25 doz. New discounts on barn door hangers No. 843 makes a further advance necessary and the new price of $11.40 doz. becomes effective at once. Prices on other hangers remain firm at former figures.

Screw Drivers Go Higher; Roofing Nails, Too

Winnipeg.

SCREWDRIVERS, ROOFING NAILS, DOOR BUTTONS.—A slight revision in prices is recorded on Perfect Handle screwdrivers made essential by advanced prices of raw materials. To-day's market prices are quoted herewith: 2-in., $4.65 doz.; 4-in., $4.65 doz.; 5-in., $5.50 doz.; 6-in., $6.60 doz.; 8-in., $8.80 doz.; 10-in., $11 doz. New prices just received from manufacturers again show a further advance in the price of Simplex roofing nails. To-day's selling price is 22c per pound. Japanned steel door buttons show a slight advance in price over last year and are now quoted at 70c gross for 1¾ inch and 80c gross for 2 inch.

Burlaps in Rapidly Advancing Market

Winnipeg.

BURLAPS.—The steady market gains in the price of cotton has been the means of advancing burlap by leaps and bounds. New prices just issued quote drab burlap at 40c sq. yd. in roll lots and 41c sq. yd. in less than rolls. Dyed burlap is quoted around 65c sq. yd. according to quality desired, with only a limited amount available as importations from Europe have now practically ceased.

Sweat Pads May Go Higher; Stocks Good

Winnipeg.

SWEAT PADS.—Prices on sweat pads still hold firm but advances are to be expected shortly, as all raw material is advancing rapidly. Shipments on the above lines have been exceptionally heavy so far and stocks are well assorted. Prices ruling to-day are given herewith: Brown and white, No. 162 N, 12 in., $6.95 doz., $79.20 gross; red edge No. 63 N, 12 in., $7.35 doz., $83.80 gross.

Wrought Iron Pipe Holds in Steady Market

Winnipeg.

WROUGHT IRON PIPE.—Prices on wrought iron pipe still hold very firm, with stocks fairly well assorted, though certain sizes are very hard to obtain. Prices ruling to-day are as follows:

	Black Per 100 feet	Galvanized Per 100 feet
¼ inch	$6 08	$ 8 42
⅜ inch	6 16	8 50
½ inch	7 83	9 63
¾ inch	9 95	12 38
1 inch	14 67	18 27
1¼ inch	19 88	24 75
1½ inch	23 76	29 57
2 inch	32 04	39 78
2½ inch	51 30	63 59
3 inch	67 05	83 16
3½ inch	84 92	.....
4 inch	100 62	.....
4½ inch	116 10	.....
5 inch	135 00	.....
6 inch	174 60	.....

Miscellaneous Lines Go to Higher Levels

Winnipeg.

MISCELLANEOUS LINES.—Advancing manufacturing costs are responsible for advances in a number of miscellaneous hardware lines and show increases of from 2 to 10 per cent. over former quotations. The lines affected are given herewith:

Harness hooks, No. 18	$5 70 doz.
Mendets	$3 30 carton
Saw vises, No. 80	$8 50 doz.
Saw vises, No. 81	14 00 doz.
Hog ringers, No. 1	1 60 doz.
Hog tongs, No. 4	4 25 doz.
Cattle leaders	1 25 doz.
Combination anvil and vise, No. 2	$3 30 each
Box scrapers, No. 1	$5 85 doz.

Putty Holding Firm and Unchanged

Winnipeg.

PUTTY.—Putty prices still hold firm and unchanged on the Winnipeg market despite the high prices now in force on linseed oil and the recent advance in whiting. New prices however are to be expected in the near future. Prices now in effect are as follows: 100 lb. drums, $5.50 100 lbs.; 25 lb. irons, $5.80 100 lbs.; 1½ lb. tins, 10c each.

Linseed Oil Firm; Turpentine Holding Up

Winnipeg.

LINSEED OIL, TURPENTINE.—The market on flaxseed is still very erratic, but to date has had no further influence on the price of linseed oil which remains firm at the following prices: Raw, $2.00 gal.; boiled, $2.03 gal. Turpentine prices remain unchanged with the usual spring movement. Prices now in effect are as follows: Barrels, 80c gal.; ½ barrels, 83c gal.; 5-gal. lots, 85c gal.; 1-gal. lots, 85c gal., plus the usual extras for containers.

PITTSBURG MARKETS

PITTSBURG, Pa., April 4.—By announcement at Washington late Tuesday night the iron and steel price schedule is carried for another three months, to June 30, the only revision being that basic iron is reduced $1 a ton to $32 at furnace, this carrying with it a reduction in Bessemer to $35.20, to maintain Bessemer at 10 per cent. above basic, and all grades of scrap on which prices have heretofore been set are reduced $1 a ton.

The steel manufacturers generally desired the set prices for steel to be continued. There were very few who were disposed to urge any advances and still fewer who thought it at all possible that plates, the only commodity about which there was any real discussion, would actually be advanced. The manufacturers desired that prices be continued to the end of the year, but it seems they later offered to be satisfied with a continuance for six months. They were in a somewhat awkward position in this matter, however, seeing that, to preserve the existing schedule, they had argued that costs had been advancing, and the argument of advancing costs did not altogether harmonize with the plea that prices should be fixed for a long period.

Now that the price matter is settled it remains to be seen whether the new situation will result in either buyers or sellers taking more interest in the market. There was no distinct evidence that buyers were holding off by reason of uncertainty as to prices, and indeed if they had bought they would have been fully protected against a decline by the government clause. As to sellers, now that they are assured they will not be compelled to accept lower prices on second quarter deliveries they may be more ready to sell.

The market is still, up to date, a tight one from the viewpoint of the buyer. It is very difficult for him to place orders. That is probably a reflection more of the shipping situation than it is of the volume of business on the books of the mills. Nominally the mills have a very large volume of business on books, between 12,000,000 and 15,000,000 tons, exclusive of government orders. The question is how much of this is live business, how much of the business the buyers would actually be willing to accept shipments against. As long as it is so difficult to make shipments on account of traffic congestion it is impossible to have this matter tried out, and apparently the mills simply proceed on the assumption that the business is all live, and none needs to be written off. A period of a few weeks of really free shipments might put an entirely different aspect on the matter. The whole question is an involved one, for even the usual distinction cannot be made between contract tonnage that is not specified and contract tonnage that is, for the reason that the mills have a large volume of specifications unfilled that was received months ago, and they do not know that buyers would be willing to receive all this steel according to the specifications. Their requirements might have changed very materially even if they had not decreased as in most cases doubtless they have.

Pig Iron

There ought to be a freer supply of pig iron by this time, as blast furnace operations have been increasing more or less steadily and are now not far from normal. Production is between 85 and 90 per cent. of capacity, whereas late in January and early in February it was below 60 per cent., if not below 50 per cent. For three successive weeks Connellsville coke shipments have run at about 334,000 net tons a week, against less than 300,000 tons shipped in any preceding week of the year. A fair estimate seems to be that full requirements of the furnaces depending on the Connellsville coke region are about 375,000 tons weekly, but they may possibly be somewhat less. In any event there remains some deficiency in beehive coke, but the by-product coke plants have lately been receiving practically full shipments of coal so that the blast furnaces depending on by-product ovens are practically fully supplied with coke. It is a fact that pig iron is accumulating, but in the case of the merchant furnaces the accumulation is attributed—by the furnaces—to lack of shipping facilities, while in the case of the steel interests it is asserted that any accumulation merely operates to restore in small measure the stocks the steel works normally carry, but which were completely used up last year. It will be strange indeed if pig iron is not easier to buy in the near future.

With the reduction of $1 a ton in basic iron ordered by the government and the attendant reduction in Bessemer to keep it 10 per cent. above basic, the new schedule of prices ruling on all deliveries April 1 and later, except on contracts made prior to January 1 is as follows, f.o.b. furnace irrespective of location: Bessemer, $35.20; basic, $32; No. 2 foundry, $33; malleable, $33.50; gray forge, $32. Leaving malleable at $33.50 can hardly be called anything but an oversight, for it should stand in relation to basic. Most of the malleable sold lately has been, generically, simply off basic.

Government Buying

Word comes that the government's shell steel buying program for second half is enlarged. It was first reported at 2,500,000 tons, but is now reported at 3,000,000 tons for the government's own shells, and 500,000 tons for account of the government's allies. The freight car buying programme appears to cover 100,000 cars, 50,000 box, 25,000 hoppers and 25,000 gondolas, at least that is what is contemplated in the enquiries against which bids were to be filed at Washington last Wednesday. It is stated that 50,000 cars may be bought late in the year. Reports several weeks ago indicated 150,000 cars or more, but very lately there was a rumor that only 50,000 would be bought.

The government is seeking heavier deliveries of plates from the plate mills, asking in general that they make 75 per cent. of their output in government form.

The Steel Corporation's steel ingot production is this week reported at 20,285,061 gross tons, against 29,910,589 tons in 1916, indicating a decrease of 625,000 tons. The Institute's recent preliminary report on total ingot production indicated 42,200,000 tons, against 41,400,000 tons made in 1916. If these figures are to be followed it would mean that the independents increased their production by 1,400,000 tons while the Steel Corporation had a decrease of 625,000 tons. That might be a reflection of the fact that the independents increased their capacity more than did the corporation, while it is a fact that both suffered from lack of coke. The corporation, however, was particularly short of coke and was awaiting completion of its very large by-product coking plant at Clairton, near Pittsburgh, which was originally expected by the end of last September, but is only now nearing completion.

LARGE ORDERS FOR SHIP PLATES

The "Iron Trade Review," under date of April 4, says:

Grimmer determination to fill promptly every demand upon it is the answer of the iron and steel industry to the supreme German onslaught on the battlefields of France. A tightening of effort and more effective co-ordination in speeding up production is apparent. The Government continues to display a more vigorous attitude in following up deliveries of steel and in eliminating delays in the supplying of material which may obstruct essential lines of manufacture.

With the opening of lake navigation in sight, plans have been crystallized to smooth the way for a maximum ore movement during the present season. Coordination of the inter-related interests of ore and coal producers, of vessel owners and of the railroads, is to be effected through committees and a superior administrative body representing all. While March showed a big gain in pig iron production over January and February, the figures for the completed first quarter strikingly display the slump compared with similar period last year. The net loss of output for the three months of 1918 compared with the first quarter of 1917 is 1,131,403 tons. March's production of 3,212,715 tons represents an increase of 894,473 tons over February and 809,488 tons over January. The average daily production in March was 103,636 tons against 77,523 tons in January. The number of active stacks was raised from 319 to 340.

Extension of federal price regulation to include railroad supplies is erpected to connection with the government's large purchases of this character about to be made. Bids have been taken from the builders on 100,000 freight cars of standardized type and on about 3,000 locomotives. These are expected to be distributed in a few days. Buying of steel by the government in behalf of the Allies is more in evidence. Large orders for ship plates and shapes have been placed for British delivery. A 60,000-ton inquiry for barb wire for Italy has been put out.

WEEKLY PAINT DEPARTMENT

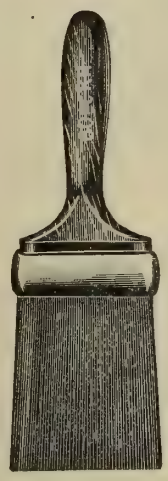
"Paint Up" an Insurance Measure

Loss by Failure to Paint Greater Than Loss by Fire — And Loss by Fire is Enormous Each Year—Should Link "Paint Up" With "Clean Up"—Saving Effected in Some Cities

"PAINT Up" should go hand in hand with the spring "Clean Up" idea. They are indivisible and inseparable. It is not possible to have things looking ship-shape around a home when the house looks as though it were about to fall to pieces. No matter how well the front and back yard may look the house, as the dominating attractive feature will reflect more than any other factor the impression that the spring cleaning has been carried out in a proper manner. The house that is in need of a coat of paint is like a shoe that is worn at the heels. It never looks well. It reflects in large measure the mental attitude and status financially of the one who is the owner thereof. From a sanitary standpoint it is very essential that back yards, alleys, sheds and other adjuncts to the house should be cleaned up each spring. But the owner of the house and yard who fails to have his house cleaned and painted, both inside and outside, is like unto the man who has one shoe heeled and polished and put in good shape, while the other shoe goes still in a worn and dirty appearance. The hardwareman should link up this clean-up idea to the paint-up idea. He can talk paint at the same time that he talks clean-up. There should be no half-way measure in the spring "Clean-Up" and "Paint-Up" proposition. They are both insurance measures. One insures against disease. The other insures against fire and depreciation.

Fire Loss in Various Cities.

John Winship, Michigan State Fire Marshal, in a report recently stated that the annual average fire loss for the last ten years in the United States, was $230,000,000. This is an enormous loss, for it works out at $630,000 per day, $26,000 per hour, or $400 per minute. It is stated on reliable authority that the annual loss through lack of painting is greater than the annual loss by fire. One of the very essential things in the preservation of ships is the coat of paint which they receive each spring before they start on the season's run. Some of them receive more than one coat of paint in the season. Ship owners recognize the value as an insurance measure of giving the ship that very necessary coat of paint, whether or not she seems to be badly in need. The action of the wind and water on the ship causes sure depreciation each year. No less does the action of wind and water on a dwelling or other building cause similar depreciation. The only difference consists in the fact that the ship that is neglected might be put out of commission a little sooner than a house that is neglected, but the destruction would be just as certain.



Real Savings Shown

Illustrative of the way a "clean-up" and "paint-up" campaign is an insurance against fire, the city of Hartford, Conn., instituted a campaign and then stayed cleaned thereafter. The following year the fire loss was reduced by $86,000, and the death rate by five per cent. In the city of Boston in the year following the clean-up and paint-up campaign, there were 1,003 fewer fires than during the previous year. This is very tangible evidence that goes to show what a paint-up and clean-up campaign will mean to any community. The benefit would be equally great to every community that undertook the same, although the net results for the smaller town would necessarily not loom as large as that of the large city.

A house that needs a coat of paint is more susceptible to the fire menace than the one that is well protected with a coat of paint. Lead and zinc being the two main ingredients of a good paint covering, it stands to reason that wood covered with such materials would stand a better chance of resisting a spark than one that has the naked wood surfaces.

There is destruction of buildings through depreciation if the surfaces are not kept well covered with paint. There is a greater fire hazard from fire itself if the wood is not kept well-covered. The paint-up idea is a matter of economy from whatever angle it is viewed. The hardwareman should not fail to press these points home to his prospective customers.

How about a Paint Brush Window?

Right now a display of Boeckh's Steel Grip Rubber Set Paint and Varnish Brushes in your window would receive plenty of sales-producing attention.

If you cannot spare the whole window, set aside a fair space for Boeckh's Brushes. Play up the Boeckh Assurance—"The Bristles can't come out," and you'll be more than repaid for your time and trouble.

Have you our latest window card?

MOORE'S

House Colors

Moore's House Colors are profitable to the dealer not only because of the big margin they leave, but also because of the super-satisfaction they give to his customers. Customers reason that such satisfaction must necessarily be the result of honest goods. They assume that where honest paint is sold there other lines of equal quality can be had.

Get our interesting proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, April 4.—The paint markets are in a continued strong position this week for the most part. Linseed oil holds interest still, because of its continued high price. Seed deliveries have not been improved to the extent it was thought they ought to be by this time, and when the lake traffic opens it will soon be seen what available supply there is for shipment eastward. Generally speaking, this is expected to be lighter than the requirements, and maintenance of prices now ruling is anticipated. Turpentine, on the other hand, shows a weaker tendency, and it is probable a reduction of four or five cents may be made in the immediate future. A good healthy condition obtains all around, with more prompt despatch of orders than is usual in the early spring.

Outlook For High Oil Is Local Impression

Montreal.

LINSEED OIL.—While there is still some fluctuating tendency in the oil market, as a result of flaxseed trading and uncertainty, it is evident from all sources that there will be a continued strength of undertone, and that no cheap oil will be obtainable. There is still lacking the desired improvement in deliveries. Any seed offered is quickly absorbed and the prices continue to rule very high. "The conditions as we see them would indicate that there will be little lowering of prices before July," said one large crusher to HARDWARE AND METAL. "United States crushers are in a less favorable position than those of Canada," stated the same source, and from all standpoints, even if delivery improves much, the accumulated orders and the shortness of spot surplus here will serve to maintain the advanced quotations. Outside, and principally at United States head-of-the-lake' points, there is the same fluctuating condition on seed, with oil prices firm.

Linseed Oil—	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 4 barrels	$1.86	$1.88½

Turpentine Is Weak And May Soon Decline

Montreal.

TURPENTINE.—Beyond the requirements for filling orders that are being shipped forward to dealers, the immediate sale of turpentine is still confined. Prices are maintained without any change, but in sympathy with the Savannah market there will very probably be a decline within the next few days. This may be from 4c to 5c per gallon. Sales of the product are likely to be larger in the immediate future, but with the season here somewhat behind-hand there is the usual delay of painting operations until weather conditions permit.

Turpentine—	Per Imp. gallon	
1 to 4 barrels	$0 65	$0 69
5 bbls. and over	0 63	0 68
Small quantities		

Putty Sales Better; Price Fully Maintained

Montreal.

PUTTY.—There seems to be a better movement of putty. This is going out with spring orders, and the trade is now preparing for the better business that is sure to develop as the weather conditions improve. The prices are naturally very firm, and these are likely to rule with a strong undertone so long as the oil merket holds strong. The container and whiting situation also will be factors in maintaining a firm range of prices.

	Per 100 lbs.		
Standard Putty—	5 ton	1 ton	Less
Bulk, in barrels	$4.00	$4.15	$4.35
Do., ½ barrels	4.15	4.30	4.50
Do., 100 lb.	4.85	5.00	5.20
Do., 25 lb.	4.85	5.00	5.20
Do., 12½ lb.	5.10	5.25	5.45
3 and 5 lb. tins	6.85	7.00	7.20
1 and 2 lb. tins	7.35	7.50	7.70

Pure linseed oil putty, $2.00 per 100 lb. advance on above prices.

Glaziers' putty—$1.60 per 100 lb. advance on above prices.

Terms: 2%, 15 days, net 60.

Fairly Active Sales For White Lead In Oil

Montreal.

WHITE LEAD IN OIL.—The situation as applying to white lead in oil rules strong, notwithstanding the fact that pig lead is somewhat easier in the United States. The largely increased price for linseed oil will serve to offset the tendency for pig lead. Trading, say the paint makers, is maintained on a fairly good basis, this referring, of course, to the amounts that are accompanying booked orders to the trade. Ton lots of standard lead are quoted on the basis of $16 per cwt.; five ton lots at $15.50, while for small lots $16.35 is asked.

Booked Paint Orders Being Now Overtaken

Montreal.

MIXED PAINT AND SPECIALTIES.—The paint manufacturers have been despatching orders for weeks now, and there is still much activity in this respect. The painting season here is probably going to be somewhat late, but there is a healthy indication, with the immediate conditions seasonably normal, or even better than usually obtain. There will likely be a more active demand in a sorting way as the trade gets under way throughout the country. All lines are firmly maintained at unchanged prices.

TORONTO

TORONTO, April 4.—Firmness prevailed in respect to linseed oil during the week and no change occurred over prices quoted last week. Turps is somewhat easier again in some quarters and the highest now being charged is about 67c per gallon. An improvement in the demand for white lead is evident and with building operations showing some increase, interest is expected to develop in glass and putty. Shipments of mixed paints are going forword in good volume and repeat orders are already being received. This would indicate aggressiveness on the part of the retailer in pushing sales and a feeling that present values are fairly apportioned.

Linseed Oil Holds Firm; Little Now Available

Toronto.

LINSEED OIL.—A much steadier tone is evident in linseed oil during the week and prices have been firmly maintained. Some little variation in the market on flax seed has occurred but this is not sufficient to influence conditions locally. At the present time there is very little oil available. Shipments of seed during the past two weeks have been practically nil and it is indicated that nearly any price could be secured were surplus oil offering. Shipments of oil in transit are expected to reach the city during the next week and further supplies to follow will help out in some quarters materially. Price of cash seed on the exchange in Winnipeg on Wednesday was 4¾c lower than on Wednesday of last week, quotations this week being $3.89¼c per bushel. This has not influenced the oil market which shows a range as follows:

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.88-$2.00	$1.90½-$2.03
3 to 5 bbls.	.....	.....
6 to 9 bbls.	.....	.....

Less than barrel lots 10c per gallon higher than single barrel price.

The Way Our Dealers' Names Get On Our Posters

SOON you will see on the bill-boards around you a great new Paint Poster of unusual beauty and attractiveness. It will stand out from all other posters on the boards. It will create interest from people who may never have noticed a bill-board before.

Such is the new

B-H Paint Poster

While its design is exceedingly attractive, careful attention has been given to a feature equally as important to our Dealers.

IN their respective towns, **B-H Dealers' Names will appear on this Poster in letters over 12 inches high.** These names will not be printed on a white sheet and pasted on, as has been done in the past. Instead, they will form an integral part of the design — handsomely lithographed "in" the posters while they are being made.

The poster will "get" the eyes of prospective paint-buyers. An impression will be indelibly stamped on their minds in favor of B-H Paints and B-H Dealers.

It is great creative publicity, such as this, that is making the B-H Agency so valuable.

We are always ready and waiting to give our dealers the utmost in co-operation.

No detail is overlooked to make our Agency the best possible—the most profitable.

A few territories are still open for exclusive representation. A line to us by return will give you all information—just in time for you to cash in on the B-H Paint demand of this coming Spring—just in time for you to get your name on a poster.

Watch our next advertisement. It will give some new ideas on the way we help B-H Dealers to make profitable paint window displays.

Turps Decline Further; Supplies Uncertain

Toronto.

TURPENTINE. — Further declines have been registered in turpentine during the week in some quarters of from 2 to 2½c per gallon. The primary market is very weak. The future of supplies for Canada are somewhat uncertain. It is reported that the United States government is taking all available ships to transport men and ammunition across the water and coastwise shipping will be greatly curtailed. This will affect further receipts of turpentine, it is thought, if government action as outlined becomes effective. The price of 67c is about the highest now being made and a spread of 5c per gallon is to be noted in the low price of 62c reached by some distributors. Present stocks are ample for the demand but the future must remain doubtful for some time to come.

	Imp. Gal.
1 barrel	$0.62 -$0.67
2 to 4 barrels	0.60½- 0.66
5 gallon lots	0.67 - 0.77..

White Lead In Oil Steady; Demand Better

Toronto.

WHITE LEAD IN OIL.—Prices on white lead in oil were firmly maintained during the week at the recent advance. A better demand is developing and a somewhat more optimistic feeling exists among the trade. Stocks are, of course, heavy and a great deal more business could be easily handled. However, continued improvement in the demand will do much towards bringing stocks to a level more in keeping with business offering. Pure white lead in oil in ton lots is selling at $16.20 per 100 pounds and smaller quantities $16.55 per 100 pounds.

Spring Orders Paint About Cleaned Up

Toronto.

MIXED PAINT.—Spring orders for mixed paints are pretty well cleaned up, the fine weather prevailing causing merchants to take delivery of their orders, in some cases, earlier than had been expected. Orders through the mail are in nearly all instances showing surprising volume and repeat business is coming along from many sources. Reports from country points indicate that paint is being sold in good quantities and those merchants who have faith in the fairness of present values are making sales. Prices held unchanged during the week though very firmly maintained. The future is still uncertain as regards prices but nothing is expected to develop for some little time in this respect—the movement will not be down.

Putty In Fair Movement; Glass Steady

Toronto.

GLASS, PUTTY. — Little interest marks the situation in putty. A slight increase in building operations is becoming evident and this will ultimately tend towards a movement in both glass and putty. Prices on putty remain unchanged, standard bulk in casks being quoted at $4.55; 100 lb. drums at $5.30-$5.40; and bladders in bbls. $5.45-5.65 per 100 pounds. Prices on pure putty range $2.00 per 100 pounds higher than those shown.

Discounts from the new list of window glass remain at 25 per cent. in full boxes, with cut lights selling at 10 per cent. Prices on plate glass show no change as yet though the market is in very firm tone. A fair volume of business in window glass is reported.

Broom Outlook Gloomy; Brushes Moving Freely

Toronto.

BRUSHES, BROOMS.—Reports from points in the United States are somewhat gloomy as to the outlook for broom corn during the coming season. This is covered in a brief article elsewhere in this issue.

Brushes continue to move out in good quantities. Manufacturers report business flourishing and jobbers' orders nearly all contain their quota of brush business. Prices are holding firm at recent advances and have not acted as a deterrent factor in orders being placed.

MARKET FOR ASBESTOS MANUFACTURES

At the present time there is a brisk demand for manufactures of asbestos in this district, but according to replies to specifications recently cabled by this office to Canada, the obstacle to the transaction of business is dearth of shipping space, according to J. E. Ray, Canadian Trade Commissioner at Birmingham, Eng. However, if it impossible to ship under the circumstances, efforts should be made to ascertain the requirements of the British market in preparation for after-war trade. As is well known, the production of raw asbestos in Canada has increased rapidly during recent years, but manufactures of the same have made but tardy progress. Some twelve months ago a range of German samples of manufactured asbestos was forwarded to the Department of Trade and Commerce. An excellent trade in these commodities was transacted by Germany with the United Kingdom prior to 1914. Firms interested can be introduced to importers in Birmingham with whom preliminaries might be discussed in preparation for future trade.

POLITICS CHARGED IN NAVAL STORES TRADE

News comes from the South that all is not harmony in naval stores circles since the recent meeting of the coordinated naval stores interests in Washington in connection with the proposed passage of the Harrison bill according to the "American Paint Journal."

It is said that Senator Kenyon of Iowa was in New Orleans recently, supposedly for the principal purpose of addressing Louisiana bankers, that while there several persons identified with the naval stores business of that city, and who are also reported to have the promised support of like connections in Pensacola, Mobile and Savannah, held a quiet conference with Senator Kenyon.

The Senator is the author of the Kenyon bill, now pending in Washington, which would cause paint manufacturers to state the complete formula on every package of their products, which, of course, would show the exact amount of turpentine used.

The meeting is supposed to have taken place March 21, and so far as known no officer of the National Paint, Oil & Varnish Association was made aware of the plans of the folks in the South. It is intimated that Senator Kenyon was promised considerable support in the passage of his bill.

What is of more immediate importance to the paint trade is the action of practically the same interests in sending to Washington Walter H. Coachman of Jacksonville and J. A. G. Carson of Savannah, with instructions to urge the national administration to fix a price on turpentine, now being sold in bulk at the stills at about 30 cents. The basis of their arguments to induce such a step on the part of the government has not been disclosed. Both are now supposed to be in Washington. The outcome of their visit is being awaited with considerable interest by the trade.

WAR DEMANDS KEEP TINWARE FACTORIES BUSY

An idea of the enormous demands which war is making on the country's "peace" industries may be gained from the fact that of the total output of American enamelled, galvanised and tinware utensils, more than one-fourth now is being diverted to military hospital and camp uses, according to officials of the Metalware Club. A particularly heavy demand for enamelled ware in the hospitals is noted.

This observation is made from a canvass of the larger manufacturers of kitchen and other household wares, who employ thousands of men and women workers and whose output totals more than $30,000,000 a year. They point out that scarcity of materials is practically the only barrier to maximum operations in the future.

Government requisitions for enamelled, galvanized and tinware utensils in almost every branch of army life are being received in increasing numbers. It is said to be a frequent occurrence for manufacturers to estimate on such requisitions as 200,000 pie plates, 20,000 dish pans, or 30,000 measures.

Manufacturers predict the present rate of 25 to 30 per cent. of their business for distinct war uses will continue for many months to come.

Big Battle's Effect On Buyers

So far the only effect upon business due to the big battle on the Western Front, has been sentimental, says THE FINANCIAL POST this week. A further effect may be looked for in renewed munitions activity in Canada, due to the need for shells. This might mean more war prosperity with increased buying power, but THE FINANCIAL POST warns that increased national financing may also be necessary, and this may affect buying power of the people.

Embargoes on Luxuries

Ottawa is at present actively concerned over the importation of luxuries from the States, and restrictions are being contemplated to correct Canada's adverse trade balance. The headlines, "Government is Ready for a Tariff War," which appear prominently on page 1 of THE FINANCIAL POST this week, tell their own story. Here are some other important subjects which are dealt with in the current issue of THE POST, and upon which in your own best business interests you would do well to keep fully informed:

Plate Mill Will be Big Asset to Dominion Steel

The West Will Sow 15 Million Acres of Wheat

Sir William Mackenzie Replies to Charge That He "Got from Under" Toronto Rails

Hog Expert Says Packers Should be Encouraged

New Lease of Life for Acadia Sugar

Steel Co.'s Profit Shows 20% Increase

Gen. Electric's Position Still Stronger

Fewer Failures in Canada as Result of War

Relations of Banks and the Government

Cutting Out Cheque Issue on Savings

A Guard Against Failures of Loan Companies

These are just a few of the outstandingly important business matters of the week dealt with concisely in THE FINANCIAL POST of March 30th. With the other business news contents of THE POST these matters are handled in manner to make it easy for the busiest man to get a complete grasp of them in breadth and in detail. Full information on important matters as they affect Canadian business is absolutely essential to success in these times, and THE FINANCIAL POST keeps you fully informed on every important business development of the week.

A POST Subscription Pays

To succeed in your business, and to lead in your community or business circle, you must read, not as a book-worm, but as a business man. THE FINANCIAL POST furnishes the brain-food of the business man—the facts from shrewd knowledge of which he forms his money-making decisions. As an investment it will pay you to send for a POST annual subscription. Send to-day, using this coupon.

A Live Line It Pays to Push

Every owner of one of the four million motor cars now in use is a possible buyer of

Berry Brothers'
Auto Color Varnishes

They are made especially for the unskilled varnisher, and are so easily applied that any man can refinish his car in his own garage just the way he wants it and save finishing shop charges and delay.

It is a live line to push, becanse by adopting the *"Berry way"* any owner can restore the spick and span appearance of his car at a merely nominal expense.

We furnish an attractive cutout counter sign in colors, and a descriptive folder telling the amateur everything he needs to know about finishing his car, just how much varnish it will take, and giving colored illustrations showing how cars look when refinished. A real selling help.

Ready to Ship Assortments

We have already put up, well selected assortments of colors that we can ship promptly. Order one to-day and get in the field early. You will sell it quickly and want more. Write for further particulars anyway.

The Babbitt Metal that's at the Front in Efficiency and Economy

HARRIS HEAVY PRESSURE

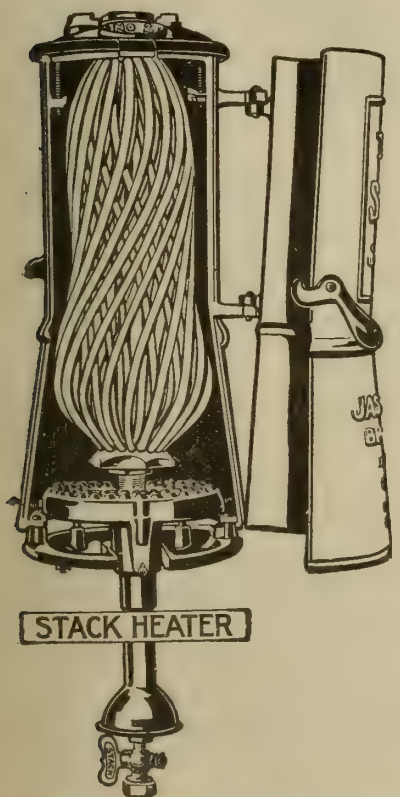
The Aristocrat of Babbitts

St. Lawrence Paper Mills Co., Limited
Mille Roches, Ont.

The Canada Metal Co., Ltd., Fraser Ave., Toronto, Ont.

Dear Sirs:

We feel like putting in a good word for your Heavy Pressure Babbitt. We installed a very heavy machine some time ago, which had all brass boxes. The shafts weigh six tons each with a top roll weighing four tons, also a lever pressure making a total pressure of about fourteen tons. The brass boxes wore out in four weeks. We then put in Heavy Pressure Babbitt and am pleased to say that we have no more trouble. We put in Heavy Pressure in a very heavy machine eighteen months ago and there seems to be no perceptible wear.



We thank you for supplying us with a babbitt that gives such good results. Your truly,

Per C. F. BUSS, Superintendent.

THE CANADA METAL COMPANY, Limited

Head Office and Factory TORONTO

BABBITT SOLDER LEAD PIPE INGOT METALS

The simple natural law

that water has a tendency to rise on being heated is taken into account in the construction of the Stack Gas Water Heater. The copper water pipes rise almost perpendicular from the base of the heater where the gas flame comes into contact with them. This means rapid circulation and quickly heated water., It is the reason why the Stack Heater will heat small quantities of water with less gas than any other heater.

It is a convincing fact to intending purchasers.

James Morrison Brass Mfg. Co., Limited

93-97 Adelaide Street West, TORONTO

B T PUMPS

Ready to Ship

Normal Prices Prevail

In spite of the increased cost of raw materials and increased cost of labor, **B.T. Ready-to-Ship Pumps** have been kept close to the price of similar pumps that prevailed before the war. And the excellence of their construction has been maintained in every particular withall. Specializing in manufacture is the secret of their remarkable low price. For we make **"Seven pumps that take the place of 700,"** permitting speed, efficiency and economy in production.

Quick Deliveries

Right now we can make reasonably quick deliveries. We cannot speak of the future with certainty as scarcity of raw materials may stand in our way. Better place your order right away for the demand which becomes especially strong during the summer months.

B.T. Pumps are ideal in construction. They are larger and heavier than any other pumps on the market designed to do similar work. Water ways are larger and spouts have larger deliveries. They are the best pumps you can sell from every point of view.

Not handled by jobbers or mail order houses—sold only to the trade. Order from our nearest branch.

Beatty Bros. Limited, Fergus, Ont.

What will Spring mean to *your* Paint Sales

?

To Stephens' Agents everywhere each succeeding Spring means a greater paint turnover than ever before.

That's the way Stephens' Paints benefit the dealer—the good effect of supplying these paints that live up to their guarantee is cumulative.

Stephens

Year after year sales increase in volume. Customers perfectly satisfied the previous season come again to ask for Stephens' Paints. They're settled on the paint question—perfectly assured by experience that Stephens' Paints are every whit as perfect as they're guaranteed to be.

If you are not satisfied with your paint prospects for this Spring, if you feel that your increase will not be as great as you deserve, get in touch with us without delay. Let us explain our proposition and tell you what it is doing for other Dealers.

The Best Share For Every Plow

CRESCENT FORGE & SHOVEL CO. TRUE FIT TRADE MARK HAVANA, ILL. U.S.A.

CRESCENT PLOWSHARES

Fit Practically Every Plow in Western Canada

OUR WARRANTY: We warrant all goods of our manufacture to be made of the best quality of steel for the purpose intended, and to be made in a workmanlike manner. Fitted plowshares are warranted to fit the plow for which they are intended. The fit of every share is carefully tested before leaving the factory, and every precaution is taken to prevent mistakes, which occasionally occur. Should any share prove defective in fit, material or workmanship, it will be cheerfully replaced free of charge.

Made in Over 1000 Patterns

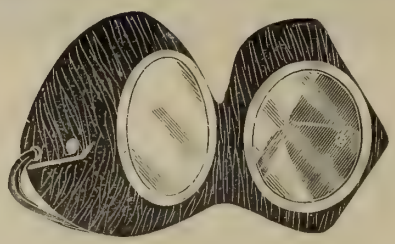
DOUGALL'S TRANSPARENT FLOOR VARNISH



Reveals the Beauty of a Floor

The beautiful grain and color of the wood comes into bold relief under this hard-drying varnish.

It covers evenly without shading, is tough and elastic without being "gummy," and wears well even under constant traffic.

You'll be as pleased as your customers if you push this good line.

SHERWIN-WILLIAMS

AUTO

ENAMELS

Are a profitable investment for any merchant.

Easy to apply, durable, and produce a beautiful, lasting finish that protects the car, as well as insuring a well-pleased customer.

S-W Auto Enamels are made from the very highest grade of raw materials, that insure satisfactory results. Your customers are looking for means to reduce their operating expenses, and this is one of them.

No man likes to ride in a dirty, shabby car, and this is not necessary, when a beautiful finish can be obtained at very little cost and labor. Skilled labor is not required to apply these enamels, as well as other finishes which are manufactured for automobile purposes by The Sherwin-Williams Co.

Here is an opportunity to increase your profits

By putting in a nice stock of S-W Auto Enamels, and satisfying the demands of your customers. Let them know that you have these goods in stock, and you will find a ready sale, which will not only increase your business in this line, but the satisfactory results obtained with S-W Auto Enamel will bring other sales for S-W paints and varnishes which you should have in stock.

For Ton Trucking Purposes

Ford

ONE-TON TRUCK

BUSINESS men everywhere who have hauling or delivering problems to consider—whether operating a wholesale business, a retail store, or a farm—will welcome the arrival of the Ford One-Ton Truck.

PRICE

$750

F. O. B.
FORD, ONT.

Supplied as chassis only

Heretofore, the Ford user who wanted to carry loads up to a ton found it necessary to get one of several special attachments or extensions which were on the market. Now the standard Ford truck is available—a car that can withstand the drudgeries of commercial use, and yet lacks superfluous weight, and is easily handled.

The truck differs from Ford passenger cars in that it is specially designed throughout in proper pattern and strength for heavy-duty service. It has a final drive of the worm gear type, so that all gears are enclosed. Rear wheels are equipped with solid tires. Front tires are pneumatic. Standard Ford motor, transmission and ignition.

The largest truck and automobile company in the British Empire, with an organization of more than 700 Canadian dealers stands back of every Ford truck purchased.

See any Ford Dealer in Canada, or write for a catalog

TEN VITAL FACTS

In times like these it is nice to be sure of some things;

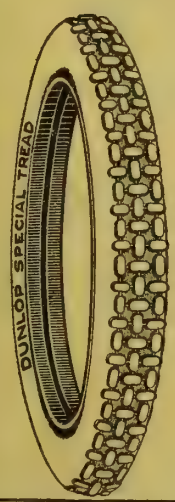
1. For 1918 you can be sure that Dunlop Tires—"Traction," "Special," "Plain"—will "come across" with the greatest mileage ever.

2. That Dunlop Tubes will continue to occupy their conspicuous position for always being the same—always good.

3. That Dunlop Accessories will include everything new that is good and everything good that is old or new.

4. That Dunlop Service will be on a par with Dunlop Reliability—none better.

5. That Dunlop Dealer co-operation will include every method which sound judgment proves will help sell sound tires.



6. That Dunlop Advertising Programme will reach farther and drive home quicker what you continuously seek —REPEAT BUSINESS.

7. That Dunlop "Traction Tread" will hold its position of being "over the top" of other anti-skids.

8. That "Special" will continue to look for comparison with any other make of tire in a similar class.

9. That "Plain" will go on filling its role of a tire at the price which suits all people on many occasions, and many people on all occasions.

10. That Dunlop will stand back of you, and Dunlop Products to the "last man and the last dollar."

Dunlop Tire & Rubber Goods Co., Limited

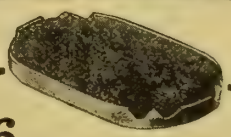
Makes a Perfect Permanent Repair



6 Round Patch & Heat Units for Punctures

Complete Outfit

$2.00 in Canada

Includes

12 Patch & Heat Units

6 Oblong Patch & Heat Units for Cuts and Tears

The Patch & Heat Unit consists of a chemically treated combustible disc on one side and a pure para rubber patch on the other. This fits over the puncture and a match is applied to the chemical disc. Without blaze or flame this disc furnishes the proper heat, which seals the cut in the tube with the new rubber, making a permanent repair.

The Patch & Heat Unit is all ready to clamp on the tube. The fuel in its metal container and the rubber patch itself are all assembled. No different parts to lose or complicated application to the tube. Simply put the unit over the puncture, clamp it down and apply the match.

SHALER

5 Minute Vulcanizer

The fact that over 500,000 motorists are now using the SHALER 5-Minute Vulcanizer is convincing proof of its ever-increasing popularity. Every motorist is a prospect for one of these handy tube vulcanizers—it should be in every car owner's tool kit—for use anywhere—on the road or in the garage.

Sell the SHALER 5-Minute Vulcanizer. Every sale of a 5-Minute Vulcanizer gives you a good profit. Besides, the big resale of patch-and-heat units furnishes you a continuous profit—it brings motorists to your place for SHALER supplies—and for all sorts of other accessories.

The SHALER 5-Minute Vulcanizer with 6 Round and 6 Oblong Patch & Heat Units packed in attractive display carton.

ORDER FROM YOUR JOBBER *NOW!*

Don't delay! The enormous demand for this popular vulcanizer makes it necessary to place your order early if you want to be sure of prompt shipment. Any jobber in the United States can supply you. Our large catalog describes the complete line of SHALER Vulcanizers for motorists' use—also complete equipment for garages and tire repair shops. Mailed free on request.

Cortland Wants Help

CORTLAND is a commercial traveller. Recently he sought a new position—this because his house—a carpet manufacturing concern—had to give up selling because it could not get wool yarn. Cortland prides himself on being a good salesman—will sell groceries, dry goods, millinery, hardware—it doesn't much matter. He has preferences, of course, but he has ability to sell. But when he sought a new position, he looked about for a firm that advertises regularly and strongly to the retailers he would be required to call on. Cortland wants to go out for a known house and one that has the modern spirit. He can sell more goods for a house of this type, and with less trouble. And the more goods he sells, the more income he has.

In this regard he differs from Spiers and a dozen other men known to him, who fancy that trade newspaper advertising by the house they represent takes away something from their personal success and power, and so makes their jobs less secure. It is blindness that makes a traveller disdain supporting trade newspaper advertising, and this view of the matter led to a rather hot discussion one day in the smoker of a G. T. R. train going to Guelph.

"What's your reason for thinking that trade newspaper advertising lessens your value as a salesman, and makes your job less secure? I know your views, but tell me what evidence you have to support them,"—this from Cortland to Spiers.

Spiers started off restating his views, but not contributing any substantial evidence. So Cortland said to him: "Spiers, get down to cases. Give me the name of a single traveller known to you that has lost out by representing a house that advertises. Come now, Spiers, get down to cases," and Spiers had to confess that "he couldn't just think of any offhand."

"All right," said Cortland. "Now let me give you the names of some men known to us both that have had a rather bad time of it on the road. There's Hughes—you know Hughes? . . . Hughes has been with three houses in the last two years. I was talking with him last Friday. He confided to me that it was hard sledding. He called on men who used to buy from Munro. But he found that it was Munro's personality that secured him the trade he had. Munro formerly represented ————, and when he left them, he carried a good deal of his trade with him. But Hughes told me that his house wasn't "sold" to Munro's customers at all, and that they were more than willing to go back to their old connections when the chance offered. It meant that Hughes failed miserably, and he felt that it was not his fault. He said that his house was but little regarded even though there was nothing to complain about its goods or service. Hughes told me that he had been having some unpleasant interviews with his "boss" when he got in Saturdays, and that the Boss wouldn't see it when he said that former customers preferred to do business with a house better known to them—through advertising in CANADIAN GROCER. Hughes quite expects to make a new connection and is going to tie up with a house well known to the trade. He says that then he'll have a chance to hold and get trade, and that it will be better for him and his reputation."

And Cortland went on to speak of several other men known to most of the company in the smoking compartment; and Spiers had to admit that he had nothing to offer in the way of rebuttal. Also, he knew from several experiences of his own that he had lost out because he represented a house that wouldn't advertise.

"Let me tell you this," went on Cortland. "I find that it is a good deal easier to sell a man who is well-informed, who reads a good trade newspaper. I find him more intelligent, quicker in his decisions, surer of his position, more appreciative of what I have to say to him and have to show him. I don't have to spend so long a time over him to get business. He is a quicker and surer buyer. On the other hand, the hardest man to sell to, and to sell a second time, is the man who gets no trade newspaper, who is ignorant of what's doing. He is suspicious, hesitates a lot, gives me business timidly, and generally is not doing a very good business. His store is poorer, his customers are fewer, and altogether he is not nearly so good a customer as the all-alive retailer who reads a good trade newspaper and knows goods and prices and is on his tip-toes all the time.

"And so I am a booster for trade newspapers. I carry a copy of DRY GOODS REVIEW with me wherever I go. I show it to my customers to substantiate arguments and to convince them. This paper is a mighty good friend of mine, and you can be sure I show our firm's advertisement every time. As a matter of fact, I help in the preparation of the advertisements, because I know what gets home to the men I call on.

"No, men, I most certainly do not agree with Spiers when he pooh-poohs trade newspaper advertising. And I pass on a friendly tip to any others among you who think that advertising takes away from your earning and selling value, and cuts something off your earnings."

FOOTNOTE:—A group of trade newspapers worthy of Cortland's "boosting" are:

CANADIAN GROCER	DRY GOODS REVIEW	BOOKSELLER AND STATIONER
HARDWARE AND METAL	MEN'S WEAR REVIEW	SANITARY ENGINEER

Each of these newspapers is relied on by subscribers in many ways—for market news, trade news, help in the conduct of business, new merchandising ideas, advertising and window-trimming assistance, and advertisers' news. Because of their large and thorough circulations among wholesalers' and manufacturers' customers, they are first-class advertising mediums. Specimen copies and advertising rates sent on application to the publishers—

Fire Extinguisher

Smothers fire—anywhere

Price in U.S. East of Colorado, $10.00, $10.50 Colorado and West. Dominion of Canada: $12.00 East of Calgary, $12.50 Calgary and West.

PROBABLY your stock is worth more and perhaps harder to get now than a year ago; and now, less than ever, can you afford waste—particularly waste caused by preventable fires.

Most fires start small—and it makes no difference to the Johns-Manville Fire Extinguisher where it starts. If the fire is accessible, pump it out—if in an awkward corner, discharge your extinguisher by air pressure previously pumped up. Two methods of fighting fire, in one extinguisher—an *exclusive* feature of the Johns-Manville Fire Extinguisher.

Approved by the Underwriters' Laboratories, Inc. Entitles motorists to *15% reduction in auto fire insurance premiums.*

***To the trade*—Ask for the interesting story about our jobber-dealer sales plan.**

A Satisfied Customer the Best Advertisement

We are pleased to inform you that we are simply delighted with your CANADIAN GROCER.

It is certainly most interesting, and your market reports are about as reliable as they can be. In fact, we do not see how we could do without it now, and the best proof we can give you that we really appreciate your paper is in subscribing to another one of your trade papers, HARDWARE AND METAL, *which you will please send along with* CANADIAN GROCER.

P. PAUL & CO.,
Duncan Station, Que.

No. 246

Why Don't You Increase Your Battery Business?

There's a ready sale for these two styles.

Number 146 North Star Multiple (6 volts), is the ideal battery for Ford Car Service. Can be stored on either side of the gasoline tank, underneath the front seat.

Number 246 North Star Multiple (6 volts), is especially designed to fit the battery box on farm Engines and Tractors.

The batteries are ready for immediate use, and all that is necessary is to connect wires to whatever devices they are intended to operate.

No loose connections,—less liable to short-circuit,—maximum life.

Also made in several other sizes to give various voltages and capacities.

Everybody can be suited. Your jobber will supply you quickly.

The Western Battery for the Western Need

No. 146

Canada Dry Cells, Limited Winnipeg

ANNOUNCING THE

H & R Self-Loading (Automatic) Pistol

Caliber .32 (7.65 M/M)

A hammerless pistol of the automatic type combining the desirable features of the various pistols now on the market and offering in the highest degree simplicity of construction, strength and reliability of mechanism, light weight and compactness.

A special circular describing this pistol, also a catalog of our complete line, will be mailed to any address on request.

LEADING HARDWARE AND SPORTING GOODS JOBBERS CAN SUPPLY.

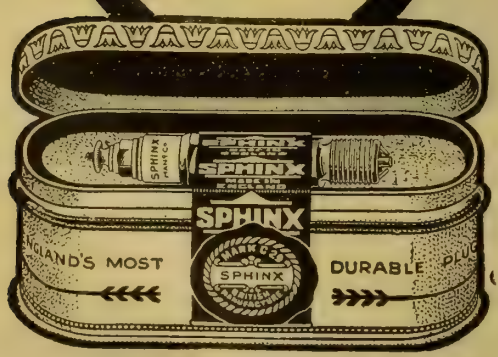
HARRINGTON & RICHARDSON ARMS COMPANY

715 PARK AVENUE, WORCESTER, MASS., U.S.A.

If interested, tear out this page and keep with letters to be answered.

The Originality

which has secured for Sphinx Plugs their position of honour throughout the world also finds expression in the mode of their packing.



The arrangement is such that without breaking the seal which holds the

"SPHINX"

plug in the box, the lid may be lifted, revealing a removable card fully descriptive of the type of plug. Thus the obvious merit of sealing is coupled with the equally essential advantage of knowing precisely whether the plug under the seal is the pattern suitable for the purpose in view.

Sole Agent for the Dominion of Canada:

W. T. EVANS
1684 St. Urbain St.
MONTREAL

A Big Seller

The Clincher Gaff is very popular among fishermen on account of its practicability, and will be in great demand this spring.

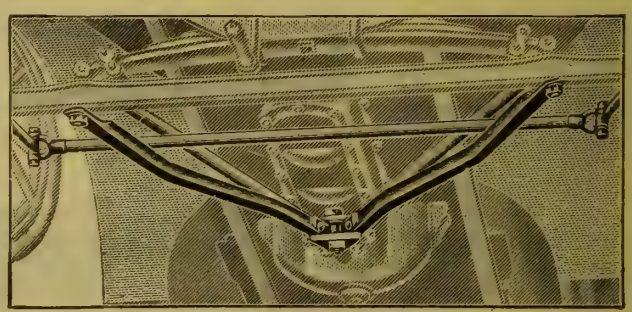
Marble's Clincher Gaff

Controlled entirely by one hand — always ready. There's nothing to set. A spring holds the jaws open. Just reach out—touch the fish—close hand. Jaws of gaff shut with a flash and grip the fish like a vise.

Will hold any fish from ½ to 20 lbs. The fish cannot slip or twist from the gaff. Quicker and surer than a landing net. It's the only humane gaff on the market. Leaves no holes or tears. Very strong and durable.

List price, $1.00. Right discount to dealers. Order a supply from your jobber to-day.

MARBLE'S SAFETY FOLDING FISH KNIFE



A combination fish knife pocket knife, and hunting knife that excels all. Cuts, rips and scales. Blade folds into handle. List, $1.25.

Write for complete catalog of Marble's Sixty Specialties for Sportsmen.

Big Opportunity To Sell To Owners of Small Cars

SUB-RADIUS ROD.—A boon to small car owners. Prevents rods from breaking or bending and eliminates chance of accidents. Stops vibration. Simple, dependable, durable.

Rear Axle Truss.—Prevents rear axle housing from sagging or being thrown out of line. No extra fittings, no holes to drill, all ready to easily adjust.

These accessories are money makers. Write direct or see your jobber.

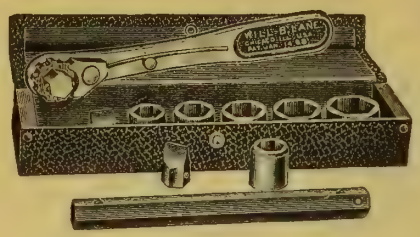
4 Good Reasons ---READ 'EM!

Why you should sell Rolled Thread Bolts and Screws:

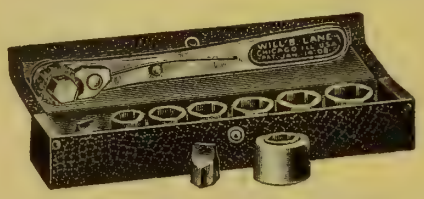
BETTER QUALITY—Rolled Thread Bolts can only be made from first quality Basic Open-Hearth Stock.



STRONGER—Actual tests show 13 per cent. greater strength than Cut Thread Bolts.

NO USELESS WEIGHT—Shanks are smaller than threads. No useless weight to pay freight on.

BIG FIRMS ADOPTING THEM—Some of the largest users on the continent will accept nothing else—and they always investigate before acting.



THE NORTHERN BOLT, SCREW AND WIRE COMPANY, LIMITED - OWEN SOUND, ONT.

If interested, tear out this page and keep with letters to be answered.

FORD SET

The Ford Set contains: 1 Handle 7 inches in length; 2 Screw-driver Bits; 1 Extension Bar 6 inches in length; SIX SOCKETS to fit all nuts and bolt heads on Ford Car, including the cylinder head.

STANDARD SET

Standard Set contains: 1 Handle 7 inches in length; 2 Screw-driver Bits; 7 Sockets to fit semi-finished Hex nuts, as follows: U.S. Standards from ¼ to ½ in.; A.L.A.M. Standards from 5-16 to 11-16 in.; Cap Screw Heads from 5-16 in. to ⅝ in.

Autoists like that ratchet feature

Lane's Unique Ratchet Wrench is ideal for close work

The autoist who has once discovered a few of the hard-to-get-at nuts and screws on his car is only too pleased to have some one introduce to him Lane's Unique Ratchet Wrench. He sees at a glance how effective the ratchet feature would be in close quarters where an ordinary tool would be absolutely useless.

Play up this ratchet feature and so arrange auto accessory displays that when motorists get up against the tool problem they will remember Lane's Unique Ratchet Wrench and come to you for a set.

Wanted

SITUATIONS VACANT

WANTED—FOR WHOLESALE HARDWARE—one experienced cost clerk, one experienced stock keeper, one experienced travelling salesman. State age, experience, salary expected and give refrences. Apply sales manager, Western Canada Agency, Limited, Lethbridge, Alberta.

I NEED A LIVE HARDWARE MAN TO TAKE charge of builders' hardware and factory sales. A fair job right now and much better later on. Write in absolute confidence telling me all I need to know and what wages you require. Box 400, Hardware and Metal.

WANTED—2 LIVE SALESMEN — ONE AS manager of department carrying electrical supplies, fixtures, mantels, grates, tiling, etc. Would also have charge of department carrying linoleum, wagons, toys, washing machines, household goods, etc. Must be good salesman and capable of managing department. Would have two or three helpers and in addition would have under his control two or three electricians.

The second salesman should have good knowledge of house furnishings, including enamelware, kitchen ware, house furnishing goods, etc.

These openings in one of Ontario's best city stores. Apply giving all details. Box 396, Hardware and Metal.

SITUATIONS WANTED

HARDWAREMAN DESIRES POSITION AS buyer, manager or salesman. Fifteen years' experience; wholesale and retail, with travelling experience. Best of references. Apply Box 401, Hardware and Metal.

MISCELLANEOUS

STOVE REPAIRS FOR GARLANDS, PEN Esthers, Acmes, Sunlights, Silver Kings, Souvenirs, Welcomes, and all kinds of ranges. Write for list and prices. Grundy Bros., Strathroy.

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

FOR SALE

HARDWARE BUSINESS FOR SALE—SOUTHwestern Ontario. Nice clean stock, about $8,000. Owner in poor health. Apply Box 386, Hardware and Metal.

HARDWARE STOCK AND BUSINESS FOR sale in live town of 800. First-class farmers' trade. Hydro just coming in. Apply Box 360, Hardware and Metal.

FOR SALE — HARDWARE BUSINESS IN large Eastern Ontario city; stock about $8,000.00. Price right for quick sale. Box 361, Hardware and Metal.

FOR SALE—BUILDING AND HARDWARE stock in good live Saskatchewan village. Stock on hand about $6,000. Living rooms above. Good opportunity and terms for right man. Box 726, Hardware and Metal.

HARDWARE BUSINESS FOR SALE. STOCK about $25,000; right on the main street; buildings 25 x 120, two-story; owner retiring. Apply P.O. Box 275, Sudbury, Ont.

ANY ONE WISHING TO SECURE A GOOD tinsmith, stove and furnace business in best town in New Brunswick; a small outlay for spot cash. For particulars apply Box 399, Hardware and Metal.

For Quick Sales

Recently a hardware dealer in Western Canada became overstocked with shotguns. He placed a want ad. in Hardware & Metal. We learned eventually that he not only disposed of his stock, but received several orders that he could not fill. If this man had kept this stock away, it would not only have deteriorated in value, but he would have had to pay taxes, insurance, etc. on it. If you have anything on hand which you wish to dispose of quickly advertise it in our want column. The quick results will make the first cost negligible.

INDEX TO ADVERTISERS

Occasionally advertisements are inserted in the paper after the index has been printed. The insertion of the advertiser's name in this index is not part of the advertising order. The index is inserted solely for the convenience of the readers of the paper.

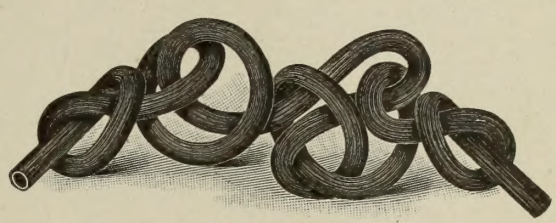
New York, N. Y.

One of our presses specially designed for wire solder, Came lead and specialties. Other presses not shown in the picture are especially adapted for lead pipe and Came leads.

Their Simplicity recommends MENDETS

A PATENT PATCH



"Mendets" are so simple in construction and application that they instantly make a hit with the busy housewife. They provide the only permanent method of mending leaks in graniteware, and hot water bags, besides effectively repairing any cooking utensil or any kind of rubber goods. "Mendets" are a necessity in every home. There's a big field in your locality.
